Question 1

Question Type: MultipleChoice

What determines if a user, device, application, or process is allowed to access a service or a resource?

Options:

- A- auditing
- B- authorization
- C- authentication
- D- accountability

Answer:

B

Question 2

Question Type: MultipleChoice

A consumer performs backup at its on-premise data center for operational recovery. The consumer wants disaster recovery (DR) protection for their data, but they do not want to own and manage a remote site for DR. Which paid backup service is most appropriate for this consumer?

Options:

- A- Local backup
- B- Remote backup
- C- Cloud-to-cloud backup
- D- Replicated backup

Answer:

D

Question 3

Question Type: MultipleChoice

How does a synthetic full backup enable a full backup copy to be created?

Options:

- A- offline without disrupting the I/O operation on the production volume
- B- offline with less I/O operation to create index pointers using fast copy
- C- online with throttled I/O operation on the production volume
- D- online with throttled I/O operation during index merge maintenance task

Answer:

C

Question 4

Question Type: MultipleChoice

What are the considerations when designing a disaster recovery plan based on RTO and RPO?

Options:

- A- Lower RTO and RPO have no effect on cost

- B-** Lower RTO and RPO simplify the solution
- C-** Lower RTO and RPO decrease the cost
- D-** Lower RTO and RPO increase the cost

Answer:

C

Question 5

Question Type: MultipleChoice

Which type of file system can be mounted on multiple compute systems running a hypervisor to access the same file system simultaneously?

Options:

- A-** Memory state file system
- B-** Clustered file system
- C-** Configuration file system

D- Virtual disk file system

Answer:

B

Question 6

Question Type: MultipleChoice

A backup administrator has defined a backup policy where full backups are scheduled at 8 PM every Saturday and differential backups for the rest of the week at same time. A data loss happened on Friday at 11 AM. How many backup copies are required to restore the requested files?

Options:

A- 2

B- 3

C- 6

D- 7

Explanation

If the data loss occurred on Friday, restoration process needs a full backup and the last differential backup that happened on a day before Friday. In case of an incremental backup, all the backup copies that occurred before Friday would be needed including the full backup copy that occurred on Saturday.

Answer:

A

Question 7

Question Type: MultipleChoice

What is a key requirement for NAS-based data migration?

Options:

- A- Files are moved but not copied
- B- Files accessible at all times
- C- File stubbed during the migration
- D- File accessible will be paused during the migration

Answer:

C

Question 8

Question Type: MultipleChoice

What is a benefit of synchronous remote replication?

Options:

- A-** provides near zero recovery point objective
- B-** requires less storage space for target than source volume
- C-** allows restoring source volume to any previous point in time
- D-** allows more storage space for target than source volume

Answer:

C
