Question 1

Question Type: MultipleChoice

In traditional system development environments, what is meant by the concept test level?

Options:

- A- the information that defines the required system behavior
- B- a group of test activities with the intention of checking the information system in respect of a number of correlated quality characteristics
- C- a group of test activities that are managed and executed collectively

Answer:

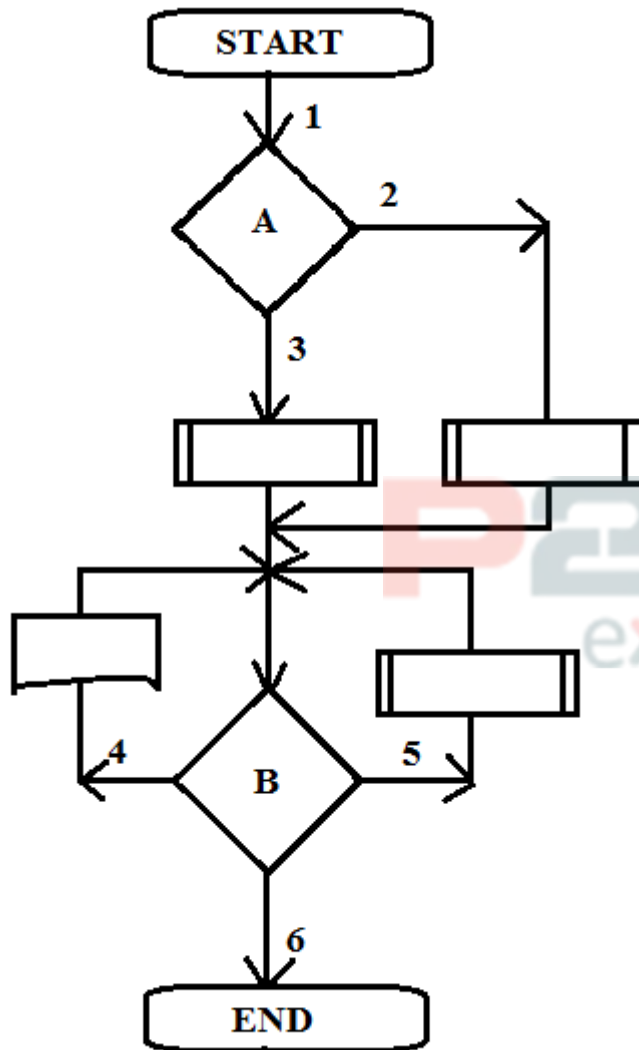

B

Question 2

Question Type: MultipleChoice

See the procedure flow below:

P2P
exams

What is the minimum number of logical test cases that is generated using the Process Cycle Test when the coverage type paths test depth level 2 is used?

Options:

- A- 2
- B- 6
- C- 8

Answer:

A

Question 3

Question Type: MultipleChoice

What is coverage based testing?

Options:

- A- a way to create a full set of test cases to cover all risks
- B- a way to derive test situations based on an analysis of the test basis and selected coverage types
- C- a way in which the tester is free to design test cases in advance or to create them during test execution
- D- a way in which a virtual group of testers across the world (a 'crowd') is involved in testing

Answer:

B

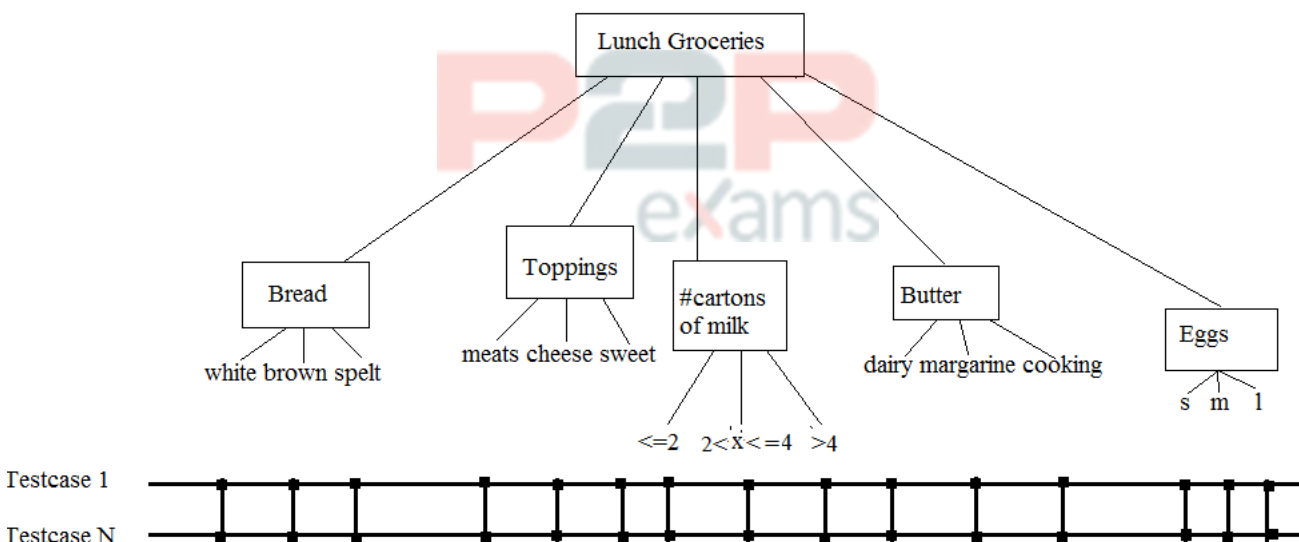

Question 4

Question Type: MultipleChoice

See the image below.

In order to test launch groceries logical test causes must be created based on the Data Combination Test. It has been agreed to use an average depth test. This means that Pairwise Testing will be applied on all data:

Test cases are designed using the classification tree below:

What is the minimum number of test cases that will be generated when using the Pairwise Testing technique? (What is 'N' as a minimum?)

Options:

- A- 3
- B- 9
- C- 12
- D- 243

Answer:

B

Question 5

Question Type: MultipleChoice

Although structured testing is hardly used by software engineers these days, there are other 'development' measurements possible that are used to increase quality.

Which 'development' measure first uses automated tests before the code is written?

Options:

- A- Acceptance Test-Driven Development
- B- Behavior-Driven Development
- C- Test-Driven Development

Answer:

C

Question 6

Question Type: MultipleChoice

Which type of tool provides information about the parts of the programme code that are run during a test?

Options:

- A- Code coverage tool
- B- Comparator
- C- Model based testing tool
- D- Stubs and drivers

Answer:

A

Question 7

Question Type: MultipleChoice

What is the aim of the activity assessing the test basis?

Options:

- A- determining the risk of the various system parts
- B- selecting the most suitable test design techniques
- C- establishing whether or not the delivered parts of the testobject can be adequately tested
- D- establishing the testability of the test basis

Answer:

D

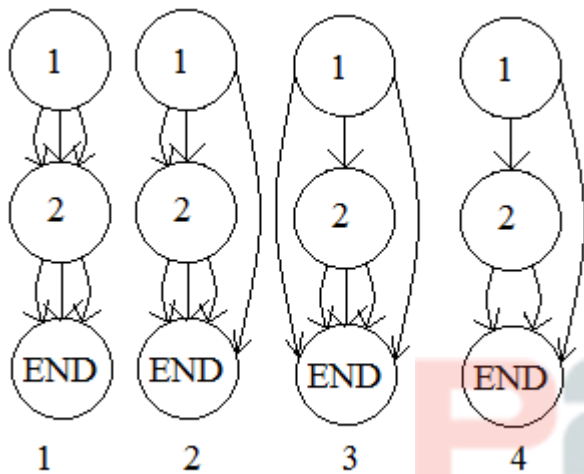

Question 8

Question Type: MultipleChoice

See the specification below:

```
IF      A OR B
THEN   Error message
ELSE
      IF      C AND D
      THEN   Y=100
      ENDIF
ENDIF
```

The test design technique Elementary Comparison Test has been used with coverage type decision points with modified condition/decision coverage. Which is the corresponding graph?

Options:

- A- 1
- B- 2
- C- 3
- D- 4

Answer:

C

Question 9

Question Type: MultipleChoice

During a project, a number of scrum teams delivers tested units(programs), which are subsequently integrated and tested in a traditional way.

In which test environment are the units (traditionally) tested first after integration of the units?

Options:

- A- test environment for user acceptance test
- B- test environment for the end-to-end test
- C- test environment for the production acceptance test
- D- test environment for the system test

Answer:

D

Question 10

Question Type: MultipleChoice

Why does one logical test case lead to one physical test case?

Options:

- A- otherwise the coverage is different
- B- a coverage type leads to one physical test case
- C- a test design technique leads to one logical test case

Answer:

C

Question 11

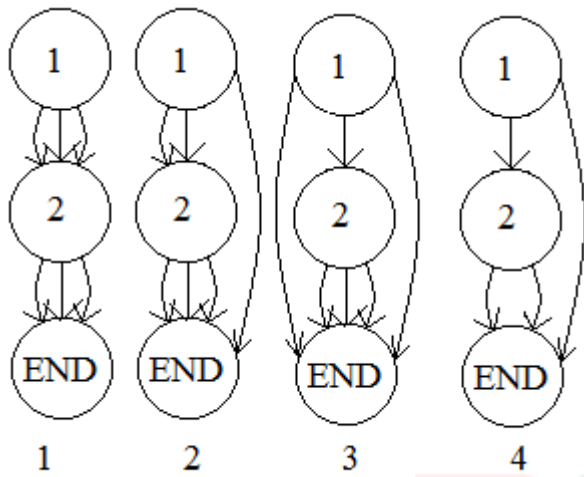

Question Type: MultipleChoice

See the specification below:

```
IF      Zip Code is correct AND customer lives in The Netherlands
THEN    Package will be delivered
ELSE
        IF (customer lives abroad OR Zip Code is incorrect)
        THEN Package will not be delivered
        ENDIF
ENDIF
```

The test design technique Elementary Comparison Test has been used with coverage type decision points with modified condition/decision coverage.

Which is the corresponding graph?

Options:

- A- 1
- B- 2
- C- 3
- D- 4

Answer:

D
