Question 1

Question Type: MultipleChoice

Which log file contains license synchronization logs on FortiSOAR?

Options:

- A- fdn.log
- B- beat.log
- C- celery.log
- D- falcon.log

Answer:

A

Explanation:

The fdn.log file in FortiSOAR contains logs related to license synchronization activities. This log file records events and errors associated with license checks and synchronization with Fortinet's licensing servers, ensuring that the FortiSOAR instance remains compliant with licensing requirements. Monitoring fdn.log can help administrators troubleshoot issues related to license synchronization and ensure the system operates within the licensed limits.

Question 2

Question Type: MultipleChoice

A security analyst has reported unauthorized access to System Configuration. You must review the user's current level of access, and then restrict their access according to your organization's requirements. As part of your auditing process, which two actions should you perform? (Choose two.)

Options:

- A- Remove the create, read, update, and delete (CRUD) permissions or roles that the user does not require.
- B- View the user's effective role permissions, and then investigate which role is providing that

access.

- C- Remove all record ownership that is assigned to the user.
- D- Review the user's learn hierarchy to ensure that the appropriate relationships are configured.

Answer:

B, D

Explanation:

To audit and restrict a user's access within FortiSOAR, particularly in response to unauthorized access reports, it's necessary to review the user's effective role permissions. This involves checking which roles grant the user access to the System Configuration module and adjusting as needed. Additionally, reviewing the user's team hierarchy ensures that the user's access aligns with the organization's policies. Misconfigurations in team relationships can sometimes inadvertently provide elevated access; hence, confirming that the team setup is correct is a critical part of the auditing process.
