Question 1

Question Type: MultipleChoice

The Record-Route header field indicates the route of a request.

Options:

- A- TRUE
- B- FALSE

Answer:

A

Explanation:

The Record-Route header is inserted by proxies to advertise their desired route for subsequent requests in the dialog.

Question 2

Question Type: MultipleChoice

Which of the following MCU debugging commands is used to display detailed information about a specified conference?

Options:

- A- conf get iaures [confNum]
- B- conf get strmInfo [confnum]
- C- conf get csdchaninfo [confnum]
- D- conf get [confNum]

Answer:

D

Explanation:

The generic conf get [confNum] command retrieves comprehensive details for the specified conference, whereas the other commands show only specific aspects (IAU resources, stream info, or channel info).

Question 3

Question Type: MultipleChoice

Which of the following network elements can be utilized to centrally manage and control, remotely schedule shutdowns, and perform batch OTA upgrades for 10,000 IdeaHub ES2 Plus devices?

Options:

- A- iManager U2000
- B- IdeaManager
- C- eSight
- D- SMC

Answer:

B

Explanation:

The IdeaManager platform is designed for large-scale IdeaHub device management, offering centralized control, remote shutdown scheduling, and batch over-the-air upgrades for fleets of up to millions of devices, including 10,000 ES2 Plus units.

Question 4

Question Type: MultipleChoice

Assume that a dual-channel audio file uses the PCM encoding, the sampling frequency is 8 kHz, and each quantized sample value corresponds to an 8-bit binary code. What is the encoding rate (kbit/s) of the audio file?

Options:

- A- 128
- B- 256
- C- 64
- D- 196

Answer:

A

Explanation:

Dual-channel PCM at 8 kHz with 8 bits per sample yields $8,000 \times 8 = 64$ kbit/s per channel; two channels give $64 \times 2 = 128$ kbit/s.

Question 5

Question Type: MultipleChoice

During a point-to-point call between different GKs, the local GK sends an LRQ request to the neighboring GK to query the information about the called node.

Options:

- A- TRUE
- B- FALSE

Answer:

A

Explanation:

In H.323, when a gatekeeper needs to locate an endpoint outside its zone, it issues a LocationRequest (LRQ) to the neighboring gatekeeper to retrieve the called party's address.

Question 6

Question Type: MultipleChoice

Currently, the widely used video compression standards include H.263, H.264, H.265, MPEG-1, MPEG-2, and MPEG-4. The H.26X series standards are mainly used for real time video communication, and the MPEG series standards are mainly used for video storage (DVD), video broadcast, and video streaming media.

Options:

- A- TRUE
- B- FALSE

Answer:

A

Explanation:

The H.26x family (H.263, H.264/AVC, H.265/HEVC) was designed with low-latency, real-time encoding/decoding in mind (ideal for videoconferencing and streaming calls) whereas MPEG-1/2/4 were originally optimized for file-based storage (VCD/DVD), broadcast and progressive streaming. Modern deployments often blend these. For example, using H.265 for both live calls and high-efficiency streaming and newer standards (like H.266/VVC) are now emerging.

Question 7

Question Type: MultipleChoice

Which option best statements is false about point-to-point calls?

Options:

- A- During a point-to-point call, the Alerting signaling is used during the H.225/RAS connection.
- B- During a point-to-point call, the called endpoint sends a call request to the GK after receiving a SETUP message.
- C- During a point-to-point call, the GK receives two call requests.
- D- During a point-to-point call, H.245 performs capability set matching before the logical channel

is opened.

Answer:

A

Explanation:

Alerting is part of the H.225 call-signaling sequence, not the RAS interface, so it is not used over the RAS channel.

exams

Question 8

Question Type: MultipleChoice

Assume the SMC system administrator wants to remotely log in to the SC in SSH mode. Which of the following is the default port for the admin user to log in to the SC?

Options:

- A- 22
- B- 144
- C- 23
- D- 122

Answer:

A

P2P
exams

Explanation:

SSH uses port 22 by default for secure CLI access to the SC admin account.

Question 9

Question Type: MultipleChoice

Which of the following NEs' information cannot be collected using the diagnostic information

collection function (Maintenance > Diagnostic Info Collection) on the SMC web interface?

Options:

- A- SMC
- B- RSE8800
- C- Box 310
- D- HW CloudLink

Answer:

C

Explanation:

The Diagnostic Information Collection feature in the SMC web UI gathers logs and status from managed hardware network elements, such as SMC-connected SC nodes, RSE8800 recording engines, and Box 310 endpoints, by selecting their device types in Maintenance > Diagnostic Info Collection. It does not support collecting diagnostic data from software clients like Huawei CloudLink.
