Question 1

Question Type: MultipleChoice

The DM function can be used to measure the delay and jitter of service packets.

Options:

- A- TRUE
- B- FALSE

Answer:

A

Question 2

Question Type: MultipleChoice

Which of the following statements about user side interfaces and network-side interfaces of E-Line services are true?

Options:

- A- User-side interfaces are NNIs, and network-side interfaces are UNIs.
- B- User-side interfaces are Layer 2 ports, and network-side interfaces are Layer 3 ports.
- C- User-side interfaces are UNIs, and network-side interfaces are NNIs.
- D- User-side Interfaces are Layer 3 ports, and network side Interfaces are Layer 7 ports.

Answer:

B, C

Question 3

Question Type: MultipleChoice

Which of the following is not an advantage of OTN?

Options:

- A- Powerful out-of-band FEC is provided.
- B- 2 Mbit/s to 400 Gbit/s service interfaces can be provided.
- C- A maximum of five levels of nested or overlapped TCM connection monitoring are provided.
- D- The requirement for Tbit/s bandwidth per fiber using the WDM function is met.

Answer:

C

Question 4

Question Type: MultipleChoice

What does ODUk_PM_BDI indicate?

Options:

- A- ODUk PM signal degradation
- B- ODUk PM section BIP-8 bit error threshold crossing
- C- ODUk PM backward defect indication
- D- ODUk PM open connection indication

Answer:

C

Question 5

Question Type: MultipleChoice

Which option best statements about LSP is false?

Options:

- A- An LSP is bidirectional.
- B- LSP is short for label switched path.
- C- Each LSP has an ID, which is called tunnel ID.
- D- An LSP contains at least one ingress and one egress.

Answer:

A

Question 6

Question Type: MultipleChoice

Which option best is not a trigger condition for the automatic switching of client 1 +1 protection?

Options:

- A- When SD is disabled, the OTU board reports the ODUk_PM_DEG alarm.
- B- The OTU board cannot be detected.
- C- The OTU board reports the OTUk_LOF alarm.
- D- The OLP or DCP board reports the R_LOS alarm.

Answer:

A

Question 7

Question Type: MultipleChoice

When light passes through a passive optical component, the optical power decreases. This decrease is called an insertion loss.

Options:

- A- TRUE
- B- FALSE

Answer:

A

Question 8

Question Type: MultipleChoice

The single wavelength incident optical power of a 100G system is lower than that of a 10G system. When 100G channels are expanded in a 10G system, the OA gain can be reduced to decrease the single-wavelength output optical power of the OA to meet the incident optical power requirements.

Options:

- A- TRUE
- B- FALSE

Answer:

B

Question 9

Question Type: MultipleChoice

Signal flow analysis is used to divide an entire network into several OMSs, identify the faulty section, determine whether the fault is occurring unidirectionally or bidirectionally, and then locate the fault along the signal flow direction based on fault information.

Options:

- A- TRUE
- B- FALSE

Answer:

B
