## Question 1

---

Question Type: MultipleChoice

---

The project owner, Paul, asks a rule author, Bea, to update rules for the Spring release, and asks Adam to review and validate Bea's changes. After Bea finishes her updates, she notifies Adam. Adam is unable to access the project to test the changes. What is the problem?

Options:

- A- Paul forgot to assign Adam as a Tester.
- B- Adam has rtsUser permissions, therefore, he cannot test rules.
- C- After Bea finished her updates, she marked the status as Finished, which prevented Adam from testing.
- D- Paul needed to mark Bea's updates to the Spring release as Reviewed so that Adam could see the updates.

Answer:

C

## Question 2

---

Question Type: MultipleChoice

---

A rule developer needs to write an action rule to apply a 20% discount to customers whose status is GOLD irrespective of the value of their shopping cart or SILVER when the value of their shopping cart is more that \$100. Which two action rules correctly represent this business rule scenario?

- A. 

```
if
  the status of the customer is GOLD
  or the status of the customer is SILVER
  and the value of the shopping cart is more than 100
then
  apply a 20% discount
```
- B. 

```
if any of the following conditions is true:
  - the status of the customer is GOLD
  - the status of the customer is SILVER and the value of the shopping cart is more than 100
then
  apply a 20% discount
```

- C. if any of the following conditions is true:  
- the status of the customer is GOLD  
- the status of the customer is SILVER  
- the value of the shopping cart is more than 100  
then  
  apply a 20% discount
- D. if  
  (the status of the customer is GOLD  
  or the status of the customer is SILVER)  
  and the value of the shopping cart is more than 100  
then  
  apply a 20% discount
- E. if  
  the status of the customer is GOLD  
  and the value of the shopping cart is more than 100  
  or the status of the customer is SILVER  
then  
  apply a 20% discount

Options:

---

- A- Exhibit: A
- B- Exhibit: B
- C- Exhibit: C
- D- Exhibit: D
- E- Exhibit: E

Answer:

---

A, E

## Question 3

---

Question Type: MultipleChoice

---

A large enterprise has multiple decision services from different business units using Decision Center as the source of truth to maintain their rules. Some of these projects have customized Decision Center behaviors in order to meet business user authoring experience requirements.

What are two reasons to use Decision Center in non-production environments in order to minimize interruption to access to Decision Center for this customer?

Options:

---

- A- To test customizations
- B- To test product updates and ifixes
- C- To test the behavior of large decision tables
- D- To develop and encourage POCs away from production
- E- To simulate new complex rule ideas away from production

Answer:

---

A, C

## Question 4

---

Question Type: MultipleChoice

---

What is needed when executing a decision service by posting a REST request?

Options:

---

- A- ruleset library
- B- ruleset name
- C- XOM JAR file
- D- RuleApp JAR file

Answer:

---

D

## Question 5

---

Question Type: MultipleChoice

---

A company wants to use ODM for asynchronous processing with large payloads and very strict performance guidelines. They want to keep data extraction and execution close to reduce any latency effects. They also need ODM to scale as they might want to execute rules from several different applications concurrently. What execution implementation fits these requirements?

Options:

---

- A- A stand-alone POJO session on a single VM.
- B- A custom MDB with a stateful or stateless rule session.

- C- A J2SE rule session to create a tightly coupled application with performance gains.
- D- An HTDS web service and increase the size of the connection pool based on performance testing needs.

Answer:

---

B

## Question 6

---

Question Type: MultipleChoice

---

What is the purpose of the Decision Warehouse?

Options:

---

- A- To store all deployed rulesets
- B- To store all meta data about deployed rulesets
- C- To store execution traces to monitor ruleset execution
- D- To store historical changes made to rule projects so previous versions can be restored

Answer:

---

C

Explanation:

---

## Question 7

---

Question Type: MultipleChoice

---

A company wants to use ODM rules for a graphical user interface (GUI) validation. They want to use rules to validate forms filled out by customers. The rules would validate user input and answers to the questions. The users must have the ability to navigate the website while waiting for the ODM response. What implementation should they use?

Options:

---

- A- Implement a REST rule service in the XML format.
- B- Implement a HTDS rule session to handle the request and response web service call.
- C- Use an EJB rule session to handle changing the state of objects in working memory.
- D- Use an asynchronous ruleset execution and an observer to end the execution or catch an exception on failure.

Answer:

---

D

## Question 8

---

Question Type: MultipleChoice

---

When creating a new metric for simulation in Decision Center, which two types are valid? (Select two.)

Options:

---

- A- Null
- B- Float
- C- String
- D- Domain
- E- Wildcard

Answer:

---

C, D

## Question 9

---

Question Type: MultipleChoice

---

Ruleset parameters can be defined for a ruleset or decision service, and the parameters can have different directions such as IN, OUT, or IN\_OUT. If the decision service being invoked includes all three different types of parameters, which statement is true?

Options:

---

- A- Only the input parameter needs to be provided in the request.
- B- Only the input-output parameter need to be provided in the request.
- C- Both output and input-output parameters need to be provided in the request.
- D- Both input and input-output parameters have to be provided in the request.

Answer:

---

A

## Question 10

---

Question Type: MultipleChoice

---

Which of the following activities can be performed through the RES REST APIs?

Options:

---

- A- Executing a ruleset only
- B- Starting and stopping the RES server
- C- Deploying new artifacts and executing rulesets
- D- Managing deployed artifacts such as ruleapps, XOMs, libraries, and execute rulesets

Answer:

---

D

Explanation:

---

## Question 11

---

Question Type: MultipleChoice

---

How can the state of a decision service branch be captured in Decision Center at a specific moment in time?

Options:

---

- A- By creating a new release
- B- By creating a snapshot from Business Console
- C- By creating a sub-branch from Business Console
- D- By creating a baseline from Enterprise Console

Answer:

---

B
