Answer:

B

---

## Question 2

---

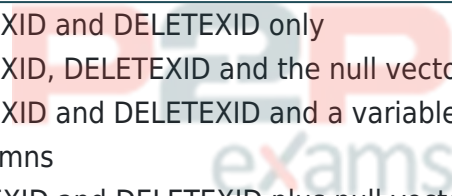

Question Type: MultipleChoice

---

When computing the row size for a table row, what overhead should be accounted for?

Options:

- A- 48 bytes for ROWID, CREATEXID and DELETXID only
- B- 32 bytes for ROWID, CREATEXID, DELETXID and the null vector
- C- 32 bytes for ROWID, CREATEXID and DELETXID and a variable number of bytes for the null vector if there are nullable columns
- D- 24 bytes for ROWID, CREATEXID and DELETXID plus null vector if there are nullable columns and record header depending on string columns

Answer:

A

---

## Question 3

---

Question Type: MultipleChoice

---

What is the purpose of the nzload control file?

Options:

- A- To define load operations in a text file instead of having to specify options on the command line
- B- To ensure that a simple load that uses external tables continues after the system is paused and resumed.
- C- To take advantage of a named pipe capability to stream the data to external tables faster.
- D- To control the re-load operations of the data file after every load failure

Answer:

A

## Question 4

---

Question Type: MultipleChoice

---

How does IBM Netezza Performance Server store data?

Options:

- A- Tables are distributed across all data slices compressed
- B- Tables are distributed to a single data slice compressed.
- C- Tables are distributed across all data slices uncompressed.
- D- Tables are distributed across a subset of data slices uncompressed.

Answer:

A

## Question 5

---

Question Type: MultipleChoice

---

What command is used to verify the release of IBM Netezza Performance Server Analytics installed?

Options:

---

- A- nzcmm --inza
