Question 1

Question Type: MultipleChoice

What action is performed in Azure when an instance is report as being in a terminated state, but NS2 expects it to be in a running state ?

Options:

- A- NS2 restart the AHV host
- B- NS2 alert the administrator that a manual replacement is required
- C- NS2 automatically reconnects with the instance
- D- NS2 condemns the host and triggers replacement of the host

Answer:

D

Question 2

Question Type: MultipleChoice

When selecting the NC2 subscription plan from the Nutanix billing portal, which options are available?

Options:

- A- Pay-as-you-Go (payG), Bring your own License (BYOL)
- B- Reserved instances, Cloud Provider Credits, Bring your own License (BYOL)
- C- Reserved instances, Bring your own License (BYOL)
- D- Pay-as-you-Go (PayG), Cloud Provider Credits, Bring you own License (BYOL)

Answer:

A

Explanation:

When selecting the NC2 subscription plan from the Nutanix billing portal, the available options are:

Pay-as-you-Go (PayG): Allows you to pay for the services as you use them, providing flexibility and avoiding upfront costs.

Bring your own License (BYOL): Enables you to use your existing Nutanix licenses within the cloud environment, offering cost savings if you already have licenses.

These options provide flexibility in how you can manage and pay for your Nutanix cloud clusters.

Question 3

Question Type: MultipleChoice

When configuring an alert email in Prism Central deployment within an NC2 environment, What is required in order for the emails to be sent properly?

Options:

- A- SMTP server configured in Prism Central Settings
- B- A whitelisted public cloud console endpoint
- C- Cluster Super Admin permissions
- D- Name servers configure in Prism Central

Answer:

A

Explanation:

SMTP Server Configuration: To send alert emails from Prism Central, it is essential to configure an SMTP server in the Prism Central settings. This server handles the email sending process, ensuring that alerts generated by Prism Central are properly delivered to the specified email addresses.

Email Notification Setup: The SMTP server settings include the server address, port, and authentication details. Once these settings are correctly configured, Prism Central can use the SMTP server to send out alert emails reliably.

SMTP Configuration for Email Alerts in Prism Central

Question 4

Question Type: MultipleChoice

An administrator has been tasked with deploying a new production NC2 cluster on Azure and is studying the deployment requirements.

How many Azure Ready Nodes, at a minimum, must the administrator ensure are deployed within the cluster?

Options:

- A- 1
- B- 3
- C- 5
- D- 6

Answer:

B

Explanation:

Minimum Node Requirement: For production deployments, Nutanix typically requires a minimum of three nodes to ensure high availability and fault tolerance within the cluster.

Azure Ready Nodes: Deploying at least three Azure Ready Nodes allows the cluster to provide redundancy, ensuring that the failure of a single node does not affect the overall availability and performance of the cluster.

High Availability and Redundancy Best Practices

Question 5

Question Type: MultipleChoice

An administrator has been tasked with ensuring NC2 VMs are able to access Azure and on-

premises resources. The NC2 VM traffic must not traverse the internet.

How can the administrator achieve this?

Options:

- A- By using an SSH connection
- B- By using an Interface Endpoint
- C- By using ExpressRoute
- D- By using a Site-to-Site VPN

Answer:

C

Explanation:

Requirement Analysis: The NC2 VMs need to access Azure and on-premises resources without traversing the internet, ensuring secure and direct connectivity.

Solution Options:

SSH Connection: Suitable for individual remote access, not for full VM connectivity to Azure and on-premises resources.

Interface Endpoint: Facilitates private connectivity to specific Azure services, but not comprehensive for all resources.

ExpressRoute: Provides private, dedicated connectivity between Azure and on-premises environments. This ensures that traffic does not traverse the public internet, meeting the security and performance requirements.

Site-to-Site VPN: Provides secure connectivity but can involve traversing the internet, which is against the requirements.

Conclusion: ExpressRoute is the optimal solution as it offers a private connection that does not involve internet traversal, ensuring secure and efficient access to both Azure and on-premises resources.

Question 6

Question Type: MultipleChoice

Which address must Azure Directory Service be able to resolve when deploying a new NC2 cluster?

Options:

- A- Download.cloud.nutanix.com
- B- Apikeys.nutanix.com
- C- Gateway-external-api.cloud.nutanix.com
- D- Gateway-internal-api-cloud.nutanix.com

Answer:

C

Explanation:

Azure Directory Service Role: Azure Directory Service must be able to resolve specific Nutanix URLs to ensure proper communication and functionality during the deployment of an NC2 cluster.

Critical Endpoint: The address 'Gateway-external-api.cloud.nutanix.com' is critical for establishing external API communications required for the deployment and management of the NC2 cluster.

DNS Resolution: Proper DNS resolution of this address ensures that the Azure Directory Service can interact with Nutanix services and APIs necessary for cluster operations.

Verification Process:

Ensure that DNS settings allow resolution of 'Gateway-external-api.cloud.nutanix.com'.

Test connectivity and resolution prior to deployment to avoid issues.

Importance: Without resolving this address, the deployment process might face connectivity issues, leading to potential deployment failures.
