Question 1

Question Type: MultipleChoice

You are designing the UI to display information about a product and are asked to use the card layout, such that:

- * The card layout summarizes the available information about a product in a visually compact manner.
- * The card layout is used as an entry point from where users can access additional details.

Which card layout is suitable for the above requirements?

Options:

- A- Object Card
- B- Mini Card
- C- Image Card
- D- Scoreboard

Answer:

A

Explanation:

Full Detailed in Depth Explanation:

Redwood offers various card layouts, each with specific use cases. The Object Card (Option A) is designed to summarize key information about an entity (e.g., a product) in a compact, visually appealing way while serving as an entry point to detailed views---perfectly matching the requirements. Mini Card (B) is too minimal for summarization, focusing on quick glances. Image Card (C) prioritizes visuals over data summary, and Scoreboard (D) is for metrics/KPIs, not product details.

Question 2

Question Type: MultipleChoice

What is the correct way to access data from Fusion Apps in your AppUI extension?

Options:

- A- Use a service from the service catalog
- B- Define a new service endpoint providing the direct service URL
- C- Establish a JDBC connection to the Oracle Fusion Apps database

Answer:

A

Explanation:

Full Detailed in Depth Explanation:

AppUI extensions use predefined services from the Fusion Apps service catalog (A) for secure data access. Direct URLs (B) and JDBC (C) bypass Oracle's standards.

Question 3

Question Type: MultipleChoice

Jim has been working on some changes in a workspace but the project manager wants Tammy to continue the work Jim did. How can they achieve this?

Options:

- A- Jim needs to first commit and push his changes to the central Git branch for Tammy to create a new workspace
- B- Jim can change ownership of the existing workspace
- C- Tammy can create a new workspace based on Jim's workspace

Answer:

A

Explanation:

Full Detailed in Depth Explanation:

In VBS, collaboration via Git is standard. Jim must commit and push changes (A) for Tammy to pull them into her workspace. Ownership transfer (B) isn't supported, and C isn't a feature.

Question 4

Question Type: MultipleChoice

How does Oracle Fusion Cloud Extensions contribute to business agility?

Options:

- A- By slowing down business processes
- B- By increasing the complexity of existing applications
- C- By allowing businesses to quickly adapt and extend their cloud applications
- D- By enforcing rigid and unchangeable processes

Answer:

C

Explanation:

Full Detailed in Depth Explanation:

Fusion Cloud Extensions, built with VBS, enable rapid customization of applications (C), enhancing agility. They don't slow processes (A), add complexity (B), or enforce rigidity (D).

Question 5

Question Type: MultipleChoice

What happens when you create a new AppUI Oracle Application Extension in VB Studio?

Options:

- A- The extension is deployed on the Fusion Application instance
- B- The extension is deployed on a stand-alone Visual Builder instance
- C- The extension is deployed to the Fusion Apps database
- D- The extension overwrites an existing page in Fusion Applications
- E- None (Explanation below)

Answer:

E

Explanation:

Full Detailed in Depth Explanation:

Creating an AppUI extension in VBS doesn't immediately deploy it (A, B, C) or overwrite pages (D)---it sets up a workspace for development. Deployment occurs later via pipelines. None of the options accurately reflect this initial step.

P2P
exams

Question 6

Question Type: MultipleChoice

Redwood uses dynamic padding to provide users with the most comfortable experience regardless of the device and viewport size. Which are the two correct statements about dynamic padding?

Options:

- A- In small breakpoints the margins disappear because the container spans the viewport's width
- B- In Edge-to-Edge layout, the margins disappear because the container spans the viewport's width
- C- Padding is the space between margins and the left and right edges of the containers
- D- There is a space between the container and the top and bottom edges of the viewport

P2P
exams

Answer:

B, D

Explanation:

Full Detailed in Depth Explanation:

In Edge-to-Edge layouts (B), margins vanish as containers span the viewport. Vertical spacing (D) exists between containers and viewport edges. A is incorrect as small breakpoints adjust padding, not margins. C misdefines padding.

Question 7

Question Type: MultipleChoice

What is the correct sequence of steps to understand a problem while designing the Redwood Reference Application?

Options:

- A- Gather feedback from product management and other stakeholders, write user goals, describe the shape of data of your use case, understand the problem, and iterate until you achieve clarity
- B- Describe the shape of data of your use case, gather feedback from product management and other stakeholders, write user goals, understand the problem, and iterate until you achieve clarity
- C- Understand the problem, write user goals, describe the shape of data of your use case, gather feedback from product management and other stakeholders, and iterate until you achieve clarity
- D- Write user goals, describe the shape of data of your use case, understand the problem, gather feedback from product management and other stakeholders, and iterate until you achieve clarity

Answer:

C

Explanation:

Full Detailed in Depth Explanation:

Redwood's design process starts with understanding the problem (C), followed by defining goals, data, feedback, and iteration. Other sequences (A, B, D) misalign with this logical flow.

Question 8

Question Type: MultipleChoice

You need to create a customer-facing portal to list products from Fusion Apps. What can you use to achieve this?

Options:

- A- An AppUI extension that has a vanity URL setup
- B- A stand-alone Visual Builder instance hosting the app
- C- An Oracle APEX app that is installed in the Fusion Cloud Apps database

Answer:

B

Explanation:

Full Detailed in Depth Explanation:

A stand-alone VB instance (B) can host a customer-facing portal with Fusion data via REST, supporting external access. AppUI extensions (A) are internal to Fusion, and APEX (C) isn't standard for this use case.

Question 9

Question Type: MultipleChoice

Which two statements are true about Web Components?

Options:

- A- A Web Component is a reusable piece of UI that can be embedded as a custom HTML element
- B- A Web Component is a collection of Service Connections, Business Objects, and CSS
- C- A Web Component can be composed of JET components, HTML, JavaScript, and CSS
- D- Web Component is not composed of JET components, HTML, JavaScript, and CSS

Answer:

A, C

Explanation:

Full Detailed in Depth Explanation:

Web Components in VB are reusable UI elements (A) built with JET, HTML, JS, and CSS (C). They aren't collections of services/objects (B), and D contradicts C.

Question 10

Question Type: MultipleChoice

How many instances of Oracle Visual Builder Studio are provisioned with your Oracle Fusion Cloud Applications tenancy?

Options:

- A- One---mapped to a TEST instance of Fusion Apps in your tenancy
- B- One---mapped to your production Fusion Apps instance
- C- None---you need to provision one manually
- D- Multiple---for each DEV instance in your tenancy

Answer:

C

Explanation:

Full Detailed in Depth Explanation:

VBS isn't automatically provisioned with Fusion Apps (C)---it requires manual setup. Options A, B, and D assume automatic provisioning, which isn't the case.
