Question 1

Question Type: MultipleChoice

An administrator set the following value: ENABLE_AUDIT_LOGGING=true during a cluster deployment. What was the purpose of this setting?

Options:

- A- Log metadata about all requests made to the Kubernetes API server.
- B- Enable log redirection to external logging server by Fluent Bit.
- C- Run scripts that collect Kubernetes API output, node logs, and node command-line output.
- D- Activate the kubectl describe command for CustomResourceDefinitions (CRDs) introduced by Cluster API.

Answer:

A

Question 2

Question Type: MultipleChoice

Which three capabilities are supported by VMware Aria Operations for Applications (formerly VMware Tanzu Observability)? (Select three.)

Options:

- A- Unified log management
- B- Setting Service Objectives
- C- Integration with VMware Aria Automation Config (formerly vRealize Automation SaltStack Config)
- D- Create a Tanzu Kubernetes cluster
- E- Event tracing
- F- Out-of-the-box and user-configurable dashboards

Answer:

A, E, F

Question 3

Question Type: MultipleChoice

What project does Contour leverage for the data plane?

Options:

- A- NSX Load Balancer
- B- Istio
- C- Envoy
- D- Prometheus

Answer:

C

Question 4

Question Type: MultipleChoice

Which version of VMware vSphere introduces the capability for provisioning a workload cluster using a cluster class (ClusterClass) from VMware Tanzu Mission Control?

Options:

- A- VMware vSphere 8
- B- VMware vCenter Server 6.7 Update 3
- C- VMware vSphere 6.7
- D- VMware

Answer:

D

Question 5

Question Type: MultipleChoice

Which statement describes a Global Namespace in VMware Tanzu Service Mesh?

Options:

- A- Apply a single policy to multiple namespaces across multiple clusters.
- B- Automatic placement of the workload to any global cluster based on traffic demand.
- C- Define an application boundary and provides consistent traffic routing, connectivity, resiliency, and security for applications across multiple clusters.
- D- Provide distributed ingress and egress services to support multiple namespaces across multiple clusters.

Answer:

C

Question 6

Question Type: MultipleChoice

What is the function of Velero?

Options:

- A- Backup and restore Kubernetes clusters
- B- Monitor cluster services
- C- Publish DNS records for applications to DNS servers
- D- Collect data and logs from different sources, unify them, and send them to multiple destinations

Answer:

A
