Question 1

Question Type: MultipleChoice

The following description of disaster recovery is incorrect?

Options:

- A-** Regardless of whether disaster recovery or backup solutions are used, compared with data during system failure, data for disaster recovery cannot be lost
Avoided
- B-** After the disaster, I hope to immediately access the backup on the remote device
- C-** The restored data hopes to meet the current work requirements immediately
- D-** The traditional use of software for data backup still has usage scenarios

Answer:

A

Question 2

Question Type: MultipleChoice

In the FC protocol, which of the following layers is responsible for encoding and decoding?

Options:

A- FC-0

B- FC-1

C- FC-2

D- FC-3

Answer:

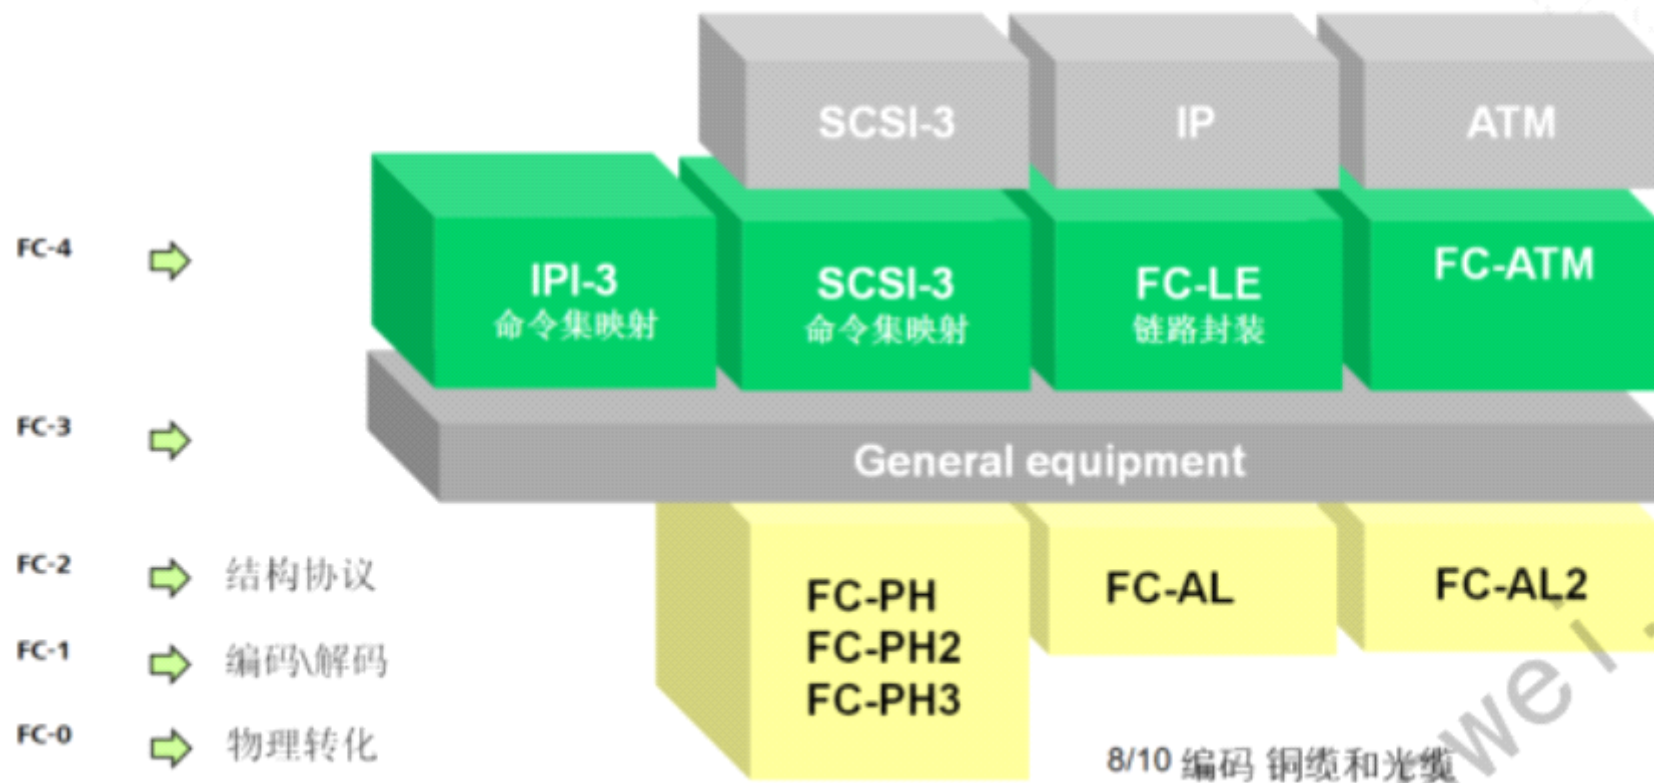

B

Explanation:

Resolution:

光纤通道协议

高层协议

Question 3

Question Type: MultipleChoice

What are the challenges facing traditional data centers? (Multiple choice)

Options:

- A- Traditional data centers only monitor but not manage
- B- Capacity expansion of traditional data centers in units of nodes
- C- Traditional data center has low cooling efficiency
- D- Traditional data center maintenance costs are high

Answer:

A, C, D

Question 4

Question Type: MultipleChoice

The NAS engine and the storage unit are interconnected by Ethernet switches.

Options:

A- TRUE

B- FALSE

Answer:

B

Question 5

Question Type: MultipleChoice

What is the role of multi-path software? (Multiple choice)

Options:

- A- Fault path switching
- B- Load balancing of IO traffic
- C- fault path recovery
- D- Data recovery

Answer:

A, B, C

Question 6

Question Type: MultipleChoice

The number of erasable times of the storage medium cell of the SSD disk is limited. Multiple erasing causes the wear of the SSD. which also makes the SSD

Has a limited period of use, which is related to the number of specific erasures.

Options:

A- yes

B- wrong

Answer:

A

Question 7

Question Type: MultipleChoice

With the advent of the era of big data, the corresponding storage technology is also undergoing changes.

Is the following statement correct? (Multiple choice)

Options:

- A-** The file system develops from a local file system to a cluster file system and a distributed file system
- B-** Traditional NAS, facing PB-level data, complex volume management and unbalanced system capacity allocation, will result in waste of resources
- C-** The mass storage system is characterized by a more complicated file system and more complicated management
- D-** Having large-scale expansion capability is the characteristic of mass storage system

Answer:

A, B, C, D

Question 8

Question Type: MultipleChoice

Description 1: The data recovery of the snapshot depends on the source data

a. If the source data is physically damaged, it cannot be recovered. and

In this case, the clone can still restore the source data.

Description 2: After the source data is damaged, the LUN copy must completely copy the backup data to restore the source data. And clone only

Damaged data needs to be recovered, which greatly reduces the recovery time.

Options:

A- description 1 is correct, description 2 is correct

B- Description 1 is right, description 2 is wrong

C- description 1 is wrong, description 2 is right

D- Description 1 is wrong, description 2 is wrong

Answer:

A
