Question 1

Question Type: Hotspot

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains a server named Server1 that has the DFS Namespaces role service installed. Server1 hosts a domain-based Distributed File System (DFS) Namespace named Files.

The domain contains a file server named Server2. Server2 contains a shared folder named Share1. Share1 contains a subfolder named Folder 1.

You need to configure a logon script that will map drive letter M to Folder1. The solution must use the path of the DFS Namespace.

How should you complete the command to map the drive letter? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Question 2

Question Type: MultipleChoice

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

Options:

- A) Azure Network Adapter
- B) a Site-to-SiteVPN
- C) an ExpressRoute circuit
- D) Azure Extended Network

Answer:

A

Explanation:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/use-azure-network-adapter>

Question 3

Question Type: Hotspot

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant

You have an on-premises web app named WebApp1 that only supports Kerberos authentication.

You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Explanation:

<https://docs.microsoft.com/en-us/azure/active-directory/app-proxy/application-proxy-add-on-premises-application>

Question 4

Question Type: MultipleChoice

You have an Azure subscription that contains the following resources:

- * An Azure Log Analytics workspace
- * An Azure Automation account
- * Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc

You need to manage Microsoft updates on Server1 by using Azure Arc

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

Options:

- A)** Add Microsoft Sentinel to the Log Analytics workspace
- B)** On Server1, install the Azure Monitor agent
- C)** From the Automation account, enable Update Management for Server1.
- D)** From the Virtual machines data source of the Log Analytics workspace, connect Server1.

Answer:

A, C

Question 5

Question Type: MultipleChoice

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

Options:

- A) Azure Network Adapter
- B) a Site-to-SiteVPN
- C) an ExpressRoute circuit
- D) Azure Extended Network

Answer:

A

Explanation:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/use-azure-network-adapter>

Question 6

Question Type: MultipleChoice

You plan to deploy a containerized application that requires .NET Core.

You need to create a container image for the application. The image must be as small as possible.

Which base image should you use?

Options:

- A) Nano Server
- B) Server Core
- C) Windows Server

D) Windows

Answer:

A

Question 7

Question Type: MultipleChoice

You have an Azure virtual machine named VM1 that has a private IP address only.

You configure the Windows Admin Center extension on VM1.

You have an on-premises computer that runs Windows 11. You use the computer for server management.

You need to ensure that you can use Windows Admin Center from the Azure portal to manage VM1.

What should you configure?

Options:

A) an Azure Bastion host on the virtual network that contains VM1.

- B) a VPN connection to the virtual network that contains VM1.
- C) a network security group (NSG) rule that allows inbound traffic on port 443.
- D) a private endpoint on the virtual network that contains VM1.

Answer:

A

Question 8

Question Type: Hotspot

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.

You have an on-premises web app named WebApp1 that only supports Kerberos authentication.

You need to ensure that users can access WebApp1 by using their Azure AD account. The solution must minimize administrative effort.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
