Question 1

Question Type: MultipleChoice

Which Nutanix Product Provide S3-Compatible Storage ?

Options:

A- Volumes
B- Files
C- Objects
D- Mine

P2P exams

Answer:

C

Question 2

Question Type: MultipleChoice

How long does a Nutanix cluster's Recycle Bin retain deleted vDisk and configuration data files?

Options:

A- 6 Hours
B- 12 Hours
C- 24 Hours
D- 48 Hours

P2P exams

Answer:

C

Explanation:

The Recycle Bin is a feature that allows administrators to recover data that has been accidentally deleted from the cluster, by storing deleted files in a temporary holding area for a certain period of time. During this time, the deleted files can be restored to their original location, effectively undoing the deletion.

The default retention period for the Recycle Bin is 24 hours, which means that any files that are deleted from the cluster will be retained in the Recycle Bin for a period of 24 hours before they are permanently deleted. This retention period can be customized to suit the needs of a particular environment, but the default value is 24 hours.

Question 3

Question Type: MultipleChoice

Where Does an administrator go to take a consolidated backup of the Key manager Servers?

Options:

A- Prism Central
B- Foundation Central
C- Prism Element
D- Security Central

Answer:

A

Question 4

Question Type: MultipleChoice

What type of relationship does a VM Affinity policy define?

Options:

A- VM to VM
B- VM to Storage tier
C- VM to Network VLAN
D- VM to Host

Answer:

D

Explanation:

The type of relationship that a VM Affinity policy defines is VM to Host. A VM Affinity policy is used to specify which host a virtual machine should be placed on. This can be used to ensure that certain VMs are always running on the same host for performance or availability reasons. Additionally, VM Affinity policies can also be used to ensure that VMs are spread across multiple hosts for better load balancing.

Question 5

Question Type: MultipleChoice

How is the destination cluster determined when uploading images from the local workstation to Prism Central?

Options:

A- Selected randomly
B- Selected manually
C- Selected alphabetically
D- Selected sequentially

Answer:

C

Explanation:

When uploading images from a local workstation to Prism Central, the destination cluster is determined based on the alphabetical order of the cluster names. Specifically, the first available cluster in alphabetical order is selected as the destination for the image upload.

This behavior is documented in the Prism Central Admin Guide, which states that when you upload an image to Prism Central, 'the image is stored in the first cluster that has sufficient space and starts with the letter that appears first in the image name.'

Question 6

Question Type: MultipleChoice

What is required to successfully live migrate a VM Between two AHV clusters?

Options:

A- Stretch L2 networks across the primary and recovery sites
B- Configure a Protection domain with synchronous replication
C- Install and Configure the witness VM on a third Site.
D- Both clusters must be managed by the same prism central

Answer:

B

Question 7

Question Type: MultipleChoice

Which technology provides Nutanix's native virtualization solution?

Options:

A- Distributed Storage Fabric
B- CVM
C- AHV
D- App Mobility Fabric

Answer:

C

Question 8

Question Type: MultipleChoice

What is Hyperconverged Infrastructure (HO)?

Options:

A- Consist of separate servers, storage networks and storage arrays.
B- Consist of a combination of separate servers, storage and networks.
C- A combination of servers and storage into a distributed infrastructure platform.
D- A combination of servers and storage into a non-distributed infrastructure platform.

Answer:

C
