## Question 1

---

### Question Type: MultipleChoice

---

InfoObject CITY is defined as a display attribute for InfoObject CUSTOMER, and InfoObject COUNTRY is defined as a display attribute for InfoObject CITY. In a master data report you want to display the COUNTRY of a CUSTOMER. Which options do you have to realize this scenario? Note: There are 3 correct answers to this question.

#### Options:

---

- A) Generate external views for CUSTOMER, CITY and COUNTRY, and join them in another calculation view.
- B) Include CUSTOMER to the rows in the BW Query on CUSTOMER and activate the Universal Display Hierarchy setting.
- C) Add COUNTRY as a transitive attribute for CUSTOMER in Info Object definition.
- D) Combine CUSTOMER, CITY, and COUNTRY in an Open ODS View using a sequence of associations
- E) Combine CUSTOMER, CITY, and COUNTRY in a Composite Provider using a sequence of left outer join operators.

#### Answer:

---

B, D, E

## Question 2

---

**Question Type: MultipleChoice**

---

In a DataStore object (advanced) of type Data Mart, which request-based deletion is possible?

**Options:**

---

- A) The latest request in the active data table
- B) The latest not-yet-activated request in the inbound table
- C) Any request in the active data table
- D) Any older activated request in the inbound table

**Answer:**

---

B

## Question 3

---

**Question Type: MultipleChoice**

---

What is the recommended cold data tiering option with SAP BW/4HANA?

**Options:**

---

- A) SAP HANA extension node
- B) SAP Data Warehouse Cloud
- C) SAP IQ database
- D) Hadoop cluster

**Answer:**

---

C, D

## Question 4

---

**Question Type: MultipleChoice**

---

In an SAP HANA HDI Calculation View, you need to combine attributes data (left table) and the data's language-dependent texts (right table) using a text join. What should you select to restrict the result set to the logon language?

**Options:**

---

- A) The language column in the right table

- B) The logon language in the left table
- C) The language column in the left table
- D) The join cardinality between both tables

**Answer:**

---

A

## Question 5

---

**Question Type:** MultipleChoice

---

Which SAP BW/4HANA objects can be used as sources of a data transfer process (DTP)? Note: There are 3 correct answers to this question.

**Options:**

---

- A) CompositeProvider
- B) InfoSource
- C) Open Hub Destination

- D) SAP HANA Analysis Process
- E) DataStore Object (advanced)

**Answer:**

---

A, D, E

## Question 6

---

**Question Type: MultipleChoice**

---

InfoObject CITY is defined as a display attribute for InfoObject CUSTOMER, and InfoObject COUNTRY is defined as a display attribute for InfoObject CITY. In a master data report you want to display the COUNTRY of a CUSTOMER. Which options do you have to realize this scenario? Note: There are 3 correct answers to this question.

**Options:**

---

- A) Generate external views for CUSTOMER, CITY and COUNTRY, and join them in another calculation view.
- B) Include CUSTOMER to the rows in the BW Query on CUSTOMER and activate the Universal Display Hierarchy setting.
- C) Add COUNTRY as a transitive attribute for CUSTOMER in Info Object definition.

- D) Combine CUSTOMER, CITY, and COUNTRY in an Open ODS View using a sequence of associations
- E) Combine CUSTOMER, CITY, and COUNTRY in a Composite Provider using a sequence of left outer join operators.

**Answer:**

---

B, D, E

## Question 7

---

**Question Type: MultipleChoice**

---

What is the recommended cold data tiering option with SAP BW/4HANA?

**Options:**

---

- A) SAP HANA extension node
- B) SAP Data Warehouse Cloud
- C) SAP IQ database
- D) Hadoop cluster

**Answer:**

---

C, D

## Question 8

---

**Question Type: MultipleChoice**

---

In a DataStore object (advanced) of type Data Mart, which request-based deletion is possible?

**Options:**

---

- A) The latest request in the active data table
- B) The latest not-yet-activated request in the inbound table
- C) Any request in the active data table
- D) Any older activated request in the inbound table

**Answer:**

---

B

## Question 9

---

**Question Type:** MultipleChoice

---

In an SAP HANA HDI Calculation View, you need to combine attributes data (left table) and the data's language-dependent texts (right table) using a text join. What should you select to restrict the result set to the logon language?

### Options:

---

- A) The language column in the right table
- B) The logon language in the left table
- C) The language column in the left table
- D) The join cardinality between both tables

### Answer:

---

A
