## Question 1

---

**Question Type:** MultipleChoice

---

Which IP subnet mask can be used to send traffic to all network nodes?

### Options:

---

- A- 192.168.0.255/23
- B- 192.168.1.11/31
- C- 172.16.1255/22
- D- 192.168.0.11/30

### Answer:

---

D

## Question 2

---

**Question Type:** MultipleChoice

---

What command sends an "Echo Request" message and expects an "Echo Reply" message?

**Options:**

---

- A- ping
- B- netstal
- C- tcpdump
- D- echo

**Answer:**

---

A

## Question 3

---

**Question Type: MultipleChoice**

---

A BIG IP Administrator needs to create a virtual server for a new secure end-to-end web application. After change in configuration the virtual server .3 still marked down. The configuration of the virtual server and the pool member are correct. A quick server shows the status.

To fix the issue, what should the BIG-IP Administrator inform the web server administrator to do?

**Options:**

---

- A- change web server configuration to use SSL/TLS
- B- reboot the server
- C- restart the web service
- D- change web server configuration to use SSH/SCP

**Answer:**

---

A

**Explanation:**

---

If the application needs to be secure 'end-to-end' the web server needs to use SSL as well. Most web servers will not require to HTTP requests when configured with HTTPS, so the monitor is failing.

## Question 4

---

**Question Type: MultipleChoice**

---

An administrator is having a connectivity issue with a server in the same network. Upon checking with the command arp -a on a Windows machine, the two outputs are taken on a 1 minute interval "hat is likely causing this issue?

**Options:**

---

- A- Interface down
- B- MAC address conflict
- C- No route available
- D- IP address conflict

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

What should the administrator investigate first to address this traffic slownes

**Options:**

---

- A- The virtual server indicates 14 slow connections killed
- B- The pool member is unchecked
- C- Interface 1.2 shows 9.2K errors
- D- The pool shows no current connections.

**Answer:**

---

C

## Question 6

---

**Question Type:** MultipleChoice

---

An administrator receives an error message when attempting to create a self-IP address on a BIG-IP appliance. Which address should the administrator use to resolve the issue?

**Options:**

---

A- 2001 0db8.85a3 0000 0000 8a2e 0370 7334

B- 2001:db8:85a3 Bd3.Ba2e.370 7334

C- 2001:0db8:85i3:0000:0000: : 8a2i:0370:7334

**Answer:**

---

A

## Question 7

---

**Question Type:** MultipleChoice

---

An administrator points the browser at h.tp://www mydomain com. The destination server listens on TCP port 8080 Which feature must be enabled on the virtual server for this configuration to work?

**Options:**

---

A- HTTP persistence

B- source NAT

C- destination address affinity

**D-** port translation

**Answer:**

---

D

**Explanation:**

---
