Question 1

Question Type: MultipleChoice

What is orchestration?

Options:

- A- automated arrangement, coordination, and management of various IT functions
- B- capability of unified controller to process block-level, file-level, and I/O requests concurrently
- C- moving inactive data out of primary storage systems into lower-cost storage systems
- D- sharing of the storage resources to increase storage utilization

Answer:

A

Question 2

Question Type: MultipleChoice

Which product allows data owners to back up and restore using native applications?

Options:

- A- Dell EMC PowerProtect Data Manager
- B- VMware vRealize Cloud Management
- C- VMware vRealize Operations
- D- Dell EMC Data Protection Advisor

Answer:

A

Question 3

Question Type: MultipleChoice

Where is the index stored after an archiving operation?

Options:

- A- Archive storage
- B- Archive server
- C- Backup server
- D- Media server

Answer:

A

Question 4

Question Type: MultipleChoice

Which model does MapReduce utilize?

Options:

- A- Batch processing

- B- Backup
- C- Geographic mapping
- D- Redundancy

Answer:

A

Question 5

Question Type: MultipleChoice

A storage system is configured with erasure coding, divided up into 12 data segments and 4 coding segments. Each segment is written to different drives. What is the maximum number of drive failures that can be withstood without losing the data in this configuration?

Options:

- A- 6
- B- 4
- C- 3

D- 5

Answer:

B

Explanation:

In a typical erasure coded storage system, a set of n disks is divided into m disks to hold data and k disks to hold coding information, where n , m , and k are integers. The coding information is calculated from the data. If up to k of the n disks fail, their contents can be recomputed from the surviving disks.

Question 6

Question Type: MultipleChoice

What is a hot backup?

Options:

- A- application is up-and-running with users accessing their data during the backup process
- B- backup is indexed from last full backup
- C- a full backup is synthesized
- D- requires the application to be shut down during the backup process

Answer:

A

Question 7

Question Type: MultipleChoice

What is the process of identifying and moving inactive data from primary storage systems to lower-cost storage systems for long-term retention?

Options:

- A- Data archiving
- B- Replication

C- Business continuity

D- Data locality

Answer:

A

Question 8

Question Type: MultipleChoice

At which layer is the risk of backup data recovered to an unauthorized destination considered a security threat?

Options:

A- Protection Application

B- Management Domain

C- Data Source

D- Database Application

Answer:

C
