Question 1

Question Type: MultipleChoice

An EMC customer wants to add a mirror to a VPLEX Local RAID 0 device. Which RAID type is created after the device attach-mirror command is issued?

Options:

A- RAID 1

B- RAID 0

C- RAID S

D- RAID C

Answer:

A

Question 2

Question Type: MultipleChoice

When should front-end ports be enabled during a VPLEX installation?

Options:

- A- After creating the meta-volumes and backup
- B- Before creating the meta-volumes and backup
- C- Before launching the VPLEX EZ-Setup Wizard
- D- After exposing storage to the hosts

Answer:

A

Question 3

Question Type: MultipleChoice

Refer to the exhibit.

```
VFlexcli:/clusters/cluster-2> vault status
```

```
-----  
Cluster level summary  
-----
```

```
Cluster:/clusters/cluster-2  
Cluster is not vaulting/unvaulting
```

During a short power disruption to cluster 2, director-2-1-A failed. Power was restored after 5 minutes. In examining the output of the vault status command, you note that cluster-2's status reads "Cluster is not vaulting/unvaulting".

Why did this message appear?

Options:

- A- The power disruption affected a single director only.
- B- There was no power disruption at cluster-1
- C- The power disruption did not affect all 'A' directors.
- D- The vaulting process runs on cluster-1

Answer:

A

Question 4

Question Type: MultipleChoice

Refer to the exhibit.

```
VPlexcli:/clusters/cluster-1/consistency-groups/DD_CG_2> ll
```

Attributes:

Name	Value
active-clusters	[]
cache-mode	synchronous
detach-rule	winner cluster-2 after 5s
operational-status	[(cluster-1,{ summary:: ok, details:: [] }),(cluster-2,{ summary:: ok, details:: [] })]
passive-clusters	[]
recoverpoint-enabled	false
storage-at-clusters	[cluster-1, cluster-2]
virtual-volumes	[DD_8_3_vol, DD_8_4_vol]
visibility	[cluster-1, cluster-2]

Contexts:

Name	Description
advanced	-
recoverpoint	-

```
VPlexcli:/clusters/cluster-1/consistency-groups/DD_CG_2> drill-down -o DD_8_3_vol
```

```
virtual-volume: DD_8_3_vol (cluster-1)
```

```
  distributed-device: DD_8_3
```

```
    distributed-device-component: DD_7_3 (cluster-1)
```

```
      extent: extent_Symm0841_03A7_1
```

```
        storage-volume: Symm0841_03A7 (blocks: 0 - 1295999)
```

```
    distributed-device-component: DD_8_32012Nov26_183659 (cluster-2)
```

```
      extent: extent_VNX_LUN102_1
```

```
        storage-volume: VNX_LUN102 (blocks: 0 - 1295999)
```

```
VPlexcli:/clusters/cluster-1/consistency-groups/DD_CG_2> █
```

You have created a Distributed Device in a VPLEX Metro system. Which VPLEX Object can be placed in a Storage View for Cluster-1?

Options:

A- DD_8_3_vol

B- DD_8_32012Nov26_183659

C- Symm0841_03A7

D- extent_Symm0841_03A7_1

Answer:

A

Question 5

Question Type: MultipleChoice

Refer to the exhibit.

```

vPlexcli:/> ndu pre-check
warning:
During the NDU process, multiple directors will be offline for a
portion of the time. This is non-disruptive but is dependent on
a host-based multipathing solution being installed, configured,
and operating on all connected hosts.

Warning:
Please run the "health-check --full" command to verify that the VPLEX hardware
is healthy.
Analyzing system configuration: .DONE
No first upgraders
=====
The output for 'ndu pre-check' has been captured in /var/log/vPlex/cli/capture/ndu-pre-check-session.txt
ndu pre-check: Evaluation of <<ndu pre-check>> failed.
cause:      Command execution failed.
cause:      No first upgraders

vPlexcli:/> version -a
-----
What      Version      Info
-----
Product Version      -      couldn't retrieve director software version(s)
SMSv2      D10.0.0.193.0 -
Mgmt Server Base    D4_MSB_7   -
Mgmt Server Software D10.0.0.218 -

vPlexcli:/>

```

You are preparing to perform an upgrade on an unconfigured VPLEX Metro. When you run the ndu pre-check command, it indicates that it has failed and there are no first upgraders. In your troubleshooting, you run the version -a command.

Based on the output, what is the reason for the failure?

Options:

- A- Directors are not connected.
- B- health-check --full was not run
- C- Directors are at incompatible code levels

D- ndu pre-check --force flag was not used

Answer:

A

Question 6

Question Type: MultipleChoice

Refer to the exhibit.

```
IPSEC is UP
Remote Management Server at IP Address 10.31.25.27 is
  reachable
Remote Internal Gateway addresses are reachable

Verifying the VPN status between the management server and
  the cluster witness server...
IPSEC is UP
Cluster Witness Server at IP Address 128.221.254.3 is
  reachable
```

Which VPlxcli command generated this output?

Options:

A- vpn status

B- ndu pre-check

C- health-check

D- ifconfig -a eth3

Answer:

A

Question 7

Question Type: MultipleChoice

Refer to the exhibit.

Name	Capacity	Vendor	IO	Type	Array Name
-----	-----	-----	Status	-----	-----
A) VPD83T3:60000970000195901057533030344344	80G	EMC	alive	traditional	EMC-SYMMETRIX-195901057
B) VPD83T3:60000970000195901057533030344345	80G	EMC	alive	traditional	EMC-SYMMETRIX-195901057
C) VPD83T3:60000970000195901057533030344346	80G	EMC	alive	traditional	EMC-SYMMETRIX-195901040
D) VPD83T3:60000970000195901057533030344430	10G	EMC	alive	traditional	EMC-SYMMETRIX-195901057
E) VPD83T3:60000970000195901057533030344431	10G	EMC	alive	traditional	EMC-SYMMETRIX-195901057
F) VPD83T3:60000970000195901057533030344346	10G	EMC	alive	traditional	EMC-SYMMETRIX-195901040

```
Vplexcli:/> meta-volume create -n Pod9_meta -d
```

Which two volumes should be used to complete the displayed command?

Options:

- A- B and C
- B- A and B
- C- D and F
- D- D and E

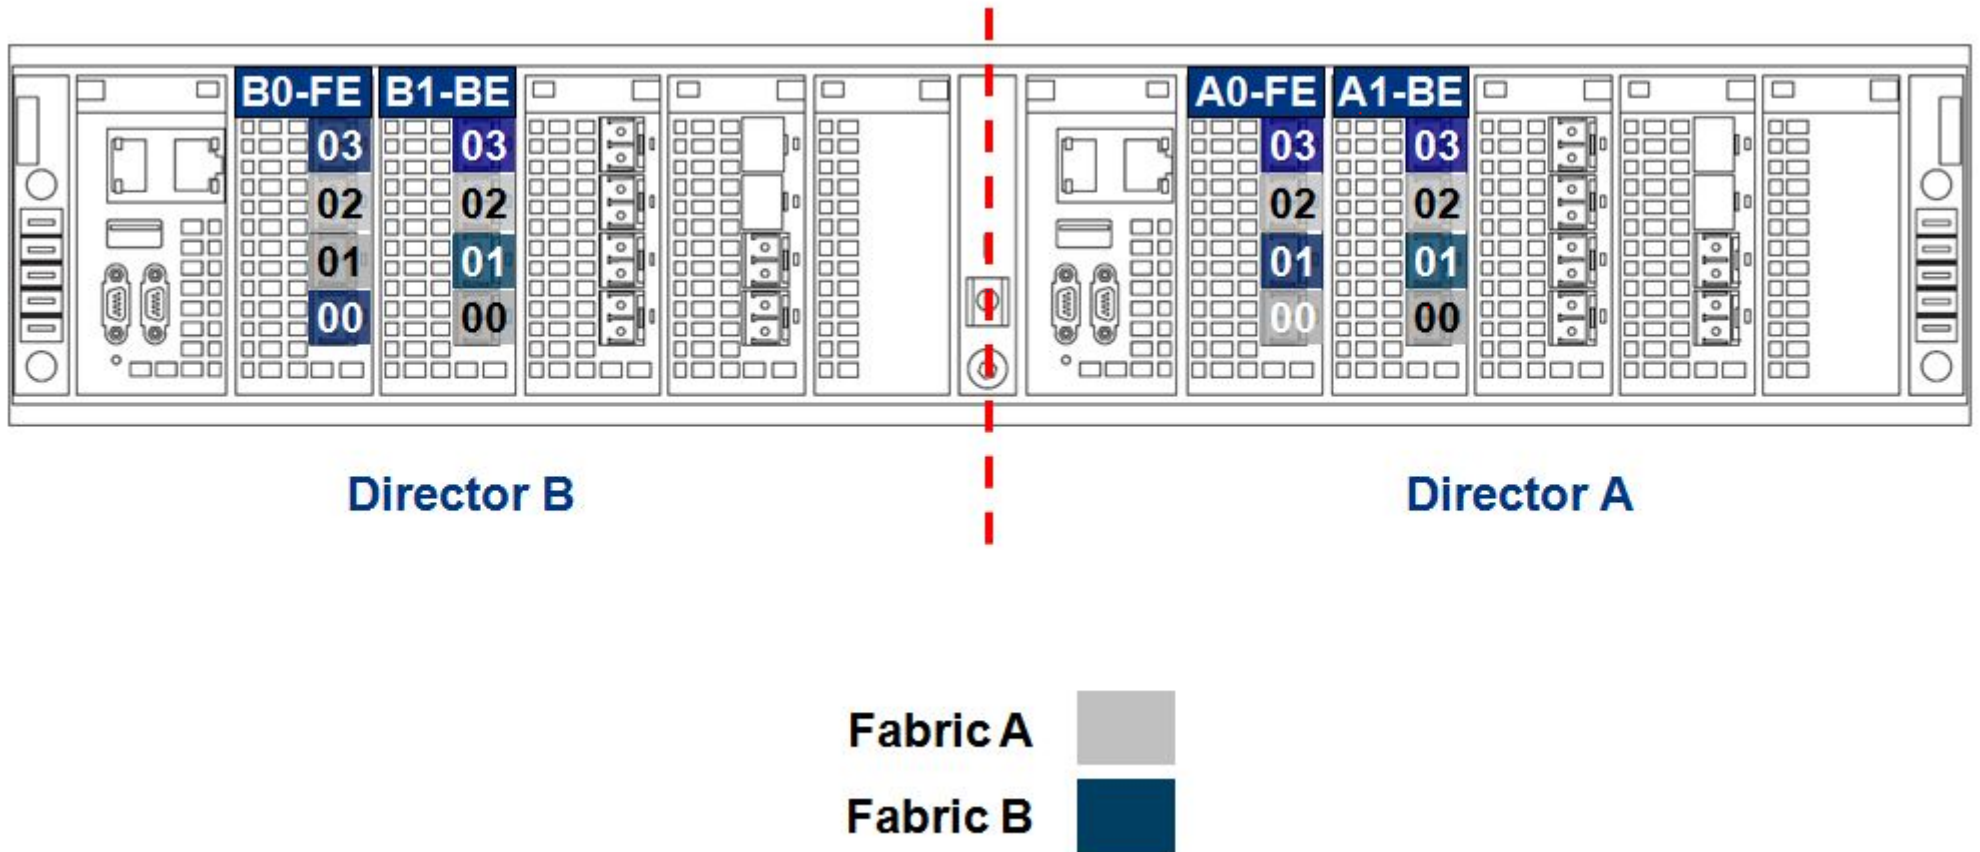

Answer:

A

Question 8

Question Type: MultipleChoice

Refer to the exhibit.

The customer has not followed EMC best practices when cabling their VS2 VPLEX engine. You are asked how to re-cable the engine to adhere to best practices. What is your response?

Options:

- A-** Swap port 00 with port 01 of module A0-FE and B0-FE
- B-** Swap port 00 with port 01 of module A1-BE and B1-BE
- C-** Swap port 02 with port 03 of module A0-FE and B0-FE
- D-** Swap port 02 with port 03 of module A1-BE and B1-BE

Answer:

A

Question 9

Question Type: MultipleChoice

Refer to the exhibit.

```
service@VPLEX_260:~> cat /var/log/VPlex/cli/connections
128.221.252.36:5988|128.221.253.36:5988,director-1-1-B
128.221.252.37:5988|128.221.253.37:5988,director-1-2-A
128.221.252.38:5988|128.221.253.38:5988,director-1-2-B
128.221.252.69:5988|128.221.253.69:5988,director-2-2-A
128.221.252.70:5988|128.221.253.70:5988,director-2-2-B
128.221.252.35:5988|128.221.253.35:5988,director-1-1-A
128.221.252.67:5988|128.221.253.67:5988,director-2-1-A
128.221.252.68:5988|128.221.253.68:5988,director-2-1-B
```

Which VPLEX configuration is shown?

Options:

- A- VPLEX Metro/GEO dual engine
- B- VPLEX Local quad engine
- C- VPLEX Metro/GEO quad engine
- D- VPLEX Local dual engine

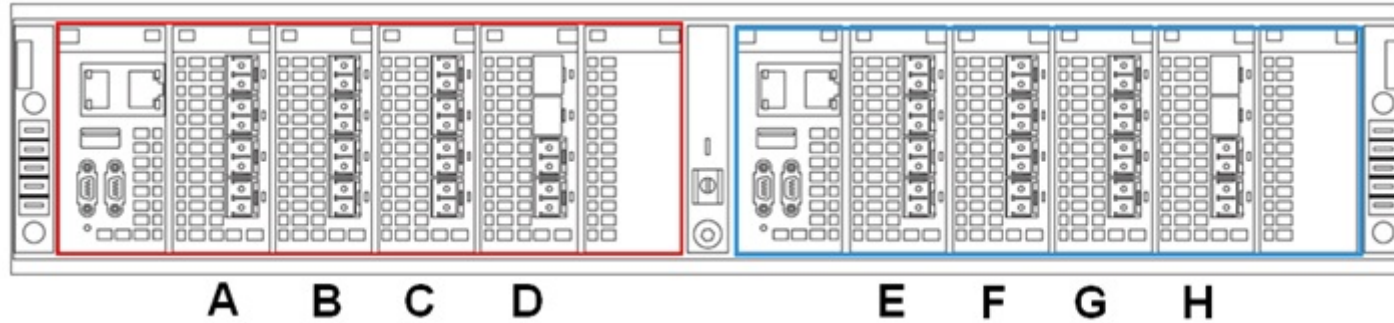

Answer:

A

Question 10

Question Type: MultipleChoice

Refer to the exhibit.

For what is the module labeled "E" used?

Options:

- A-** Director A Front-end Connectivity
- B-** Director A Back-end Connectivity
- C-** Director A WAN COM Connectivity
- D-** Director A Local Com Connectivity

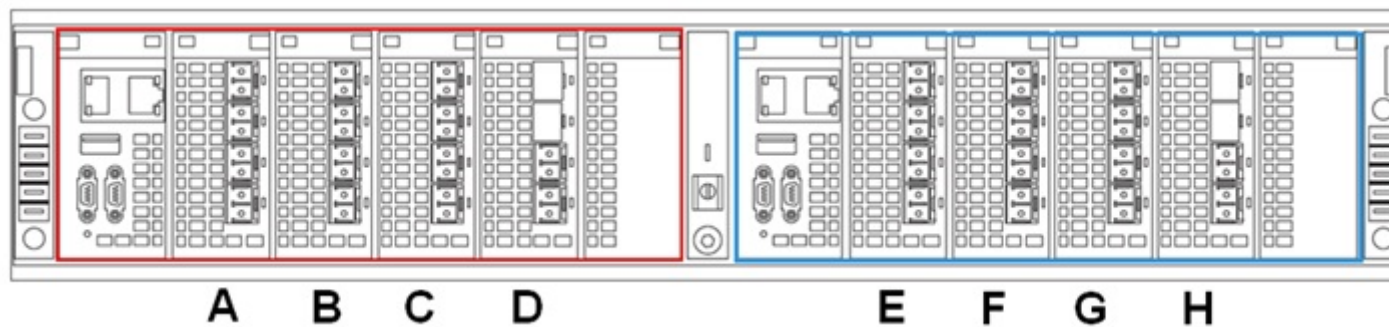

Answer:

A

Question 11

Question Type: MultipleChoice

Refer to the exhibit.

Which two modules are used for WAN-COM connectivity?

Options:

- A-** C and G
- B-** C and D
- C-** D and E

D- G and H

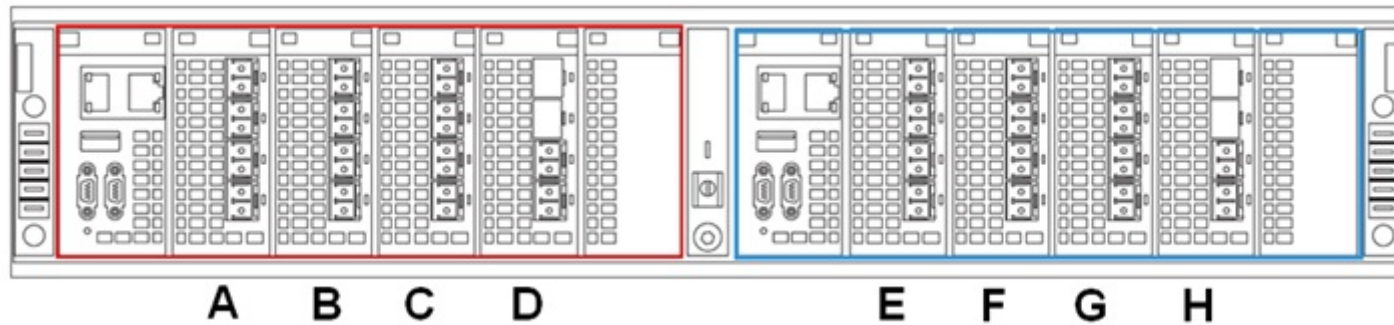

Answer:

A

Question 12

Question Type: MultipleChoice

Refer to the exhibit.

What is the function of the Module in slot "A"?

Options:

- A- Front-end connectivity
- B- Back-end connectivity
- C- WAN-COM connectivity
- D- Local-COM connectivity

Answer:

A
