## Question 1

---

**Question Type:** MultipleChoice

---

Regarding the definition of WIPS/WIDS, which of the following statements is correct?

### Options:

---

- A- WIDS Is a wireless intrusion prevention system
- B- WIPS Wireless intrusion detection system
- C- WIDS Is a wireless intrusion countermeasure system
- D- WIPS Is a wireless intrusion prevention system

### Answer:

---

D

## Question 2

---

**Question Type:** MultipleChoice

---

An enterprise adopts hardware SACG access method for admission control. The configuration commands are as follows, among which Key; Admin@123

```
[USG] right-manager server-group
```

```
[USG-rightm] localip 10.1.10.2
```

```
[USG-rightm]serverip 10. 1.31.78 shared-key Adnln@123
```

```
[USG2100-rightm] right-manager server-group enable.
```

Assuming that the other configurations are correct, based on the above configuration only, which of the following options is correct?

### Options:

---

- A- After completing the configuration, SACG can successfully link with the Agile Controller-Campus.
- B- After completing the configuration, SACG cannot successfully link with Agile Contrlle-Campus. P
- C- Can issue pre-authentication domain ACL.
- D- The linkage cannot be successful but the terminal can access the pre-authentication domain server.

### Answer:

---

B

## Question 3

---

**Question Type: MultipleChoice**

---

View on the switch Agile Controller-Campus The policy issued by the server is as follows:

For this strategy, which of the following options are correct? (Multiple choice)

### Options:

---

- A- Common\_ user Users can access Internet www H.
- B- VIP Users can access Internet w H.
- C- VIP Can visit Mail Server H.
- D- Common user Users can access Mail\_ Sever resource.

### Answer:

---

B, C, D

## Question 4

---

**Question Type: MultipleChoice**

---

A network adopts 802.1X To authenticate access users, the access control equipment is deployed at the convergence layer, and after the deployment is completed, it is used on the access control equipment t-aa The command test is successful, but the user cannot access the network. The failure may be caused by the following reasons? (Multiple choice)

**Options:**

---

- A- The aggregation layer device is not configured RADIUS Certification template.
- B- Agile Controller-Campus The switch is not added on NAS equipment.
- C- Connect to the terminal on the device to open 802.1X Function.
- D- The Layer 2 link is used between the access device and the aggregation device, and it is not turned on 802 Instrument transparent transmission function

**Answer:**

---

C, D

## Question 5

---

**Question Type:** MultipleChoice

---

Which of the following options belongs to MC prioritized pail Authentication application scenarios?

### Options:

---

**A-** User use portal Page for authentication

**B-** Users follow WeChat for authentication.

**C-** User use IAC Client authentication

**D-** User use Pota At the first certification,RAOIUS Used by the server cache terminal MAC Address, if the terminal goes offline and then goes online again within the validity period of the cache,RAIUS The server directly searches the cache for the terminal's MAC The address is discussed.

### Answer:

---

D

## Question 6

---

**Question Type: MultipleChoice**

---

In the Agile Controller-Campus admission control technology framework, regarding the description of RADIUS, which of the following options is correct?

**Options:**

---

- A- PADIUS Used on the client and 802.1X Information such as user names and passwords are passed between switches.
- B- PADIUS Used in 802.1X Switch and AAA Information such as user name and password are passed between servers.
- C- PADIUS Used for Portal Server pushes to users Web page.
- D- PADIUS Used for server to SACG Security policy issued by the device

**Answer:**

---

B

## Question 7

---

**Question Type: MultipleChoice**

---

Regarding patch management and Windows patch checking strategies, which of the following descriptions is wrong?

**Options:**

---

- A- Patch management and Windows The patch check strategy can check whether the terminal host has installed the specified Windows Make system patches.

- B-** Windows Patch check strategy focuses on checking whether the terminal host is installed Windows Operating system patches.
- C-** When the terminal host does not install the specified Windows When making a system patch, according to Windows The patch check policy prohibits terminal hosts from accessing the controlled network.
- D-** Patch management focuses on checking whether the terminal host has installed the specified patch,Perform access control on the terminal host.

**Answer:**

---

D

## Question 8

---

**Question Type:** MultipleChoice

---

Security zone division means to better protect the internal network security,Based on the business type and security requirements of the intranet, divide the intranet into several granularities.

Logical are

a. Which of the following options does not belong Agile Controller-Campus Security domain?

**Options:**

---

- A- User domain
- B- Network domain
- C- Business domain:
- D- Attack domain

**Answer:**

---

D

## Question 9

---

**Question Type:** MultipleChoice

---

Regarding the identity authentication method and authentication type, which of the following descriptions is correct?

**Options:**

---

- A- User passed web The method can support two authentication types: local authentication and digital certificate authentication.
- B- User passed web Agent The method can support two authentication types: digital certificate authentication and system authentication.
- C- User passed Agent The method can support three authentication types: local authentication, digital certificate authentication and system authentication.

**D-** User passed web Agent The method can support two authentication types: digital certificate authentication and local authentication.

**Answer:**

---

C

## Question 10

---

**Question Type: MultipleChoice**

---

There are two types of accounts on the Agile Controller-Campus: one is a local account and the other is an external account.

Which of the following is not a local account?

**Options:**

---

**A-** Ordinary account

**B-** Guest account

**C-** Anonymous account

**D-** Mobile certificate account

**Answer:**

---

D

## Question 11

---

**Question Type:** MultipleChoice

---

There are two ways for Business Manager to download patches. When using hierarchical deployment, you can download patches directly from the management center or through Microsoft patches Server download patch.

**Options:**

---

**A-** True

**B-** False

**Answer:**

---

B

## Question 12

---

**Question Type: MultipleChoice**

---

802.1X During the authentication, if the authentication point is at the aggregation switch, in addition to RADIUS,AAA,802.1X In addition to the conventional configuration, what special configuration is needed?

**Options:**

---

- A- Both the aggregation layer and the access layer switches need to be turned on 802.1X Function.
- B- Access layer switch needs to be configured 802. 1X Transparent transmission of messages.
- C- The aggregation switch needs to be configured 802 1X Transparent transmission of messages.
- D- No special configuration required

**Answer:**

---

B
