# Question 1

---

## Question Type: MultipleChoice

---

An administrator in a company of 349 users has a pair of AOS-CX switches with connections to external networks. Both switches are configured for OSPF. The administrator wants to import external routes on both switches, but assigns different seed metrics to the routes, as well as imports them as external type-1 routes.

What is the best way for the administrator to accomplish this?

### Options:

---

- A) Create a route map with the correct route type and metrics
- B) Define the route type and metrics in the OSPF process
- C) Create a classifier policy with the correct route type and metrics
- D) Define a class and policy map with the correct route type and metrics

### Answer:

---

A

## Question 2

---

### Question Type: MultipleChoice

---

A company has a third-party AAA server solution. The campus access layer was just upgraded to AOS-CX switches that perform access control with MAC-Auth and 802.1X. The company has an Aruba Mobility Controller (MC) solution for wireless, and they want to leverage the firewall policies on the controllers for the wired traffic. What is correct about how the company should implement a security solution where the wired traffic is processed by the MCs?

### Options:

---

- A) Implement standards-based RADIUS VSAs to pass policy information directly to the AOS-CX switches and MCs
- B) Implement local user roles with a gateway role defined on the AOS-CX switches.
- C) Implement downloadable user roles with a gateway role defined on the AOS-CX switches.
- D) Implement downloadable user roles with a device role defined on the AOS-CX switches and MCs

### Answer:

---

B

## Question 3

---

**Question Type: MultipleChoice**

---

A company has just purchased AOS-CX switches. The company has a free and open-source AAA solution. The company wants to implement access control on the Ethernet ports of the AOS-CX switches.

Which security features can the company implement given the equipment that they are using?

**Options:**

---

- A) Port-based tunneling
- B) Downloadable user roles
- C) Device fingerprinting
- D) Local user roles

**Answer:**

---

D

## Question 4

---

**Question Type: MultipleChoice**

---

An administrator is implementing a downloadable user role solution involving AOS-CX switches. The AAA solution and the AOS-CX switches can successfully authenticate users: however the role information fails to download to the switches. What policy should be added to an intermediate firewall to allow the downloadable role function to succeed?

**Options:**

---

- A) Allow UDP 1811
- B) Allow UDP 8211
- C) Allow TCP 22
- D) Allow TCP 443

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

Which protocols are used by NetEdit to interact with third-party devices? (Select two )

### Options:

---

- A) SNMP
- B) telnet
- C) CDP
- D) SSH
- E) Restful API

### Answer:

---

A, D

## Question 6

---

### Question Type: MultipleChoice

---

An administrator has an aggregation layer of 8325CX switches configured as a VSX pair. The administrator is concerned that when OSPF network changes occur, the aggregation switches will respond to the changes slowly, and this will affect network connectivity especially VoIP calls, in the connected access layer switches

What should the administrator do on the aggregation layer switches to alleviate this issue?

### Options:

---

- A) Implement bidirectional forwarding detection (BFD).
- B) Reduce the hello and dead interval timers
- C) implement route aggregation
- D) implement graceful restart

### Answer:

---

A

## Question 7

---

### Question Type: MultipleChoice

---

The two PCs are located in VLAN 11 (10.1.11.0/24). Which example defines how to implement active gateway on the vsx core for VLAN 11?

A)

```
vsx
 vrrp group 1
```

B)

---

```
interface lag 254
  active-gateway ip 10.1.11.1
  active-gateway mac 02:02:00:00:01:00
```

C)

---

```
interface lag 254
  active-gateway vlan 11 ip 10.1.11.1
  active-gateway vlan 11 mac 02:02:00:00:01:00
```

D)

**Options:**

---

A) Option

B) Option

C) Option

D) Option

**Answer:**

---

B

## Question 8

---

**Question Type:** MultipleChoice

---

How is voice traffic prioritized correctly on AOS-CX switches'?

### Options:

---

- A) By implementing voice VLANs
- B) By implementing weighted fair queueing (WFQ)
- C) By placing it in the strict priority queue
- D) By defining device profiles with QOS settings

### Answer:

---

A

## Question 9

---

**Question Type:** MultipleChoice

---

A company has an existing wireless solution involving Aruba APs and Mobility controllers running 8.4 code. The solution leverages a third-party AAA solution. The company is replacing existing access switches with AOS-CX 6300 and 6400 switches. The company wants to leverage the same security and firewall policies for both wired and wireless traffic.

Which solution should the company implement?

**Options:**

---

- A) IPSec
- B) Downloadable user roles
- C) RADIUS dynamic authorization
- D) User-based tunneling

**Answer:**

---

D
