Question 1

Question Type: MultipleChoice

What does ICMP Time Exceeded" mean?

Options:

- A) The ping command exceeded the time limit.
- B) The traceroute command exceeded the time limit
- C) Remote host did not respond
- D) TTL has reached zero

Answer:

D

Question 2

Question Type: MultipleChoice

10:20: 37 .00749:IP 199.16.255.254.36664>10.0.1.10 http : flags (s) seq 700424862, Win 29200

A website is fronted by a load balancer that implements a full proxy architecture with SNAT enabled. Behind the load balancer, there are two nodes: Node 1 and Node 2.

The administrator is debugging an issue on Node 1 using `tcpdump` and records the above output about a received packet on the interface. To which IP address does the IP address "192.168.255.254" belong?

Options:

- A) node2
- B) node 1
- C) load balancer
- D) web Client

Answer:

C

Question 3

Question Type: MultipleChoice

In the context of load balancing, what does the term persistence" refer to?

Options:

- A) Ensuring requests from a single source always end up being handled by the same server.
- B) the ability to associate different HTTP requests to a single user so that activity can be tracked.
- C) Keeping TLS session key information in memory so sessions can be quickly resumed
- D) the ability to keep idle connections open as long as possible by sending dummy traffic periodically

Answer:

A

Question 4

Question Type: MultipleChoice

What describes the third "A" in the common authentication acronym AAA?

Options:

- A) provides redundancy
- B) measures usage against an identity
- C) provides user filtered access
- D) ensures the correct identity

Answer:

C

Question 5

Question Type: MultipleChoice

What does "ICMP Time Exceeded" mean?

Options:

- A) The ping command exceeded the time limit.

- B) The traceroute command exceeded the time limit
- C) Remote host did not respond
- D) TTL has reached zero

Answer:

D

Question 6

Question Type: MultipleChoice

In the context of load balancing, what does the term persistence" refer to?

Options:

- A) Ensuring requests from a single source always end up being handled by the same server.
- B) the ability to associate different HTTP requests to a single user so that activity can be tracked.
- C) Keeping TLS session key information in memory so sessions can be quickly resumed
- D) the ability to keep idle connections open as long as possible by sending dummy traffic periodically

Answer:

A

Question 7

Question Type: MultipleChoice

10:20: 37 .00749:IP 199.16.255.254.36664>10.0.1.10 http : flags (s) seq 700424862, Win 29200

A website is fronted by a load balancer that implements a full proxy architecture with SNAT enabled. Behind the load balancer there are two nodes: Node 1 and node2.

The administrator is debugging an issue on node 1 using `tcpdump` and records the above output about a received packet on a network interface. Does the IP address "192.168.255.254" belong to...

Options:

- A) node2
- B) node 1
- C) load balancer
- D) web Client

Answer:

C

Question 8

Question Type: MultipleChoice

What describes the third "A" in the common authentication acronym AAA?

Options:

- A) provides redundancy
- B) measures usage against an identity
- C) provides user filtered access
- D) ensures the correct identity

Answer:

C
