Question 1

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-120 Mix Questions IN THIS CASE STUDY

You have an SAP workload on an Azure virtual machine.

You have a built-in role-based access control (RBAC) role definition in the JSON format.

You plan to change the built-in role definition to a custom role definition.

Which property value in the built-in role definition must you change?

Options:

- A- assignableScopes
- B- notActions
- C- roleHoae
- D- actions

Answer:

C

Question 2

Question Type: MultipleChoice

You have an SAP environment on Azure that uses multiple subscriptions.

To meet GDPR requirements, you need to ensure that virtual machines are deployed only to the West Europe

and North Europe Azure regions.

Which Azure components should you use?

Options:

- A- Azure resource locks and the Compliance admin center
- B- Azure resource groups and role-based access control (RBAC)
- C- Azure management groups and Azure Policy
- D- Azure Security Center and Azure Active Directory (Azure AD) groups

Answer:

C

Explanation:

Azure Policy enables you to set policies to conform to the GDPR. Azure Policy is generally available today at no additional cost to Azure customers. You can use Azure Policy to define and enforce policies that help your cloud environment become compliant with internal policies as well as external regulations.

Azure Policy is deeply integrated into Azure Resource Manager and applies across all resources in Azure. Individual policies can be grouped into initiatives to quickly implement multiple rules. You can also use Azure Policy in a wide range of compliance scenarios, such as ensuring that your data is encrypted or remains in a specific region as part of GDPR compliance. Microsoft is the only hyperscale cloud provider to offer this level of policy integration built in to the platform for no additional charge.

Question 3

Question Type: MultipleChoice

You have an SAP Cloud Platform subscription and an Azure Active Directory (Azure AD) tenant.

You need to ensure that Azure AD users can access SAP Cloud App by using their Azure AD credentials.

What should you configure?

Options:

- A- Active Directory Domain Services (AD DS)
- B- SAP Cloud Platform Identity Authentication

- C- A conditional access policy
- D- SAP Cloud Connector

Answer:

A

Explanation:

When you integrate SAP Cloud Platform Identity Authentication with Azure AD, you can:

Control in Azure AD who has access to SAP Cloud Platform Identity Authentication.

Enable your users to be automatically signed-in to SAP Cloud Platform Identity Authentication with their Azure AD accounts.

Manage your accounts in one central location - the Azure portal.

Question 4

Question Type: MultipleChoice

Which Azure service should you deploy for the approval process to meet the technical requirements?

Options:

- A- Just in time (JIT) VM access
- B- Azure Active Directory (Azure AD) Identity Protection
- C- Azure Active Directory (Azure AD) Privileged identity Manager (PIM)
- D- Azure Active Directory (Azure AD) conditional access

Answer:

B

Question 5

Question Type: MultipleChoice

You plan to migrate an on-premises SAP development system to Azure.

Before the migration, you need to check the usage of the source system hardware, such as CPU, memory, network, etc.

Which transaction should you run from SAP GUI?

Options:

- A- SM51
- B- DB01
- C- DB12
- D- ST06

Answer:

D

Explanation:

ST06 is a transaction code used for Operating System Monitor in SAP.

SAP transaction ST06 (Operating System Monitor) is classified in the Basis Component module under application component Operating System Monitors and runs Monitoring Operating System program RSHOST05 upon execution.

Question 6

Question Type: MultipleChoice

You are deploying an SAP production landscape on Azure.

You deploy virtual machines that have SAP Digital Boardroom and SAP HANA installed. You need to measure network latency between the virtual machines. What should you use?

Options:

- A- SockPerf
- B- Connection Monitor in Azure Network Watcher
- C- Iometer
- D- Network Performance Monitor

Answer:

B

Question 7

Question Type: MultipleChoice

You have an on-premises SAP NetWeaver application server and SAP HANA database deployment.

You plan to migrate the on-premises deployment to Azure.

You provision new Azure virtual machines to host the application server and database roles.

You need to initiate SAP Database Migration Option (DMO) with System Move.

On which server should you start Software Update Manager (SUM)?

Options:

- A- the virtual machine that will host the application server
- B- the on-premises application server
- C- the on-premises database server
- D- the virtual machine that will host the database

Answer:

B
