Question 1

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

Your network contains an Active Directory Domain Services (AD DS) domain. The functional level of the domain is Windows Server 2012 R2.

You need to create and link an authentication policy silo.

What should you do first?

Options:

- A- Raise the domain functional level to Windows Server 2016.
- B- Raise the domain functional level to Windows Server 2025.
- C- Create an authentication policy.
- D- Create an authentication policy silo.

Answer:

A

Question 2

Question Type: MultipleChoice

You have an Azure virtual machine named VM1 that runs Windows Server.

You plan to deploy a new line-of-business (LOB) application to VM1.

You need to ensure that the application can create child processes.

What should you configure on VM1?

Options:

- A- Microsoft Defender Credential Guard
- B- Microsoft Defender Application Control
- C- Microsoft Defender SmartScreen
- D- Exploit protection

Answer:

A

Explanation:

<https://docs.microsoft.com/en-us/microsoft-365/security/defender-endpoint/customize-exploit-protection?view=o365-worldwide>

Question 3

Question Type: MultipleChoice

You have a server that runs Windows Server. The server is configured to encrypt all incoming traffic by using a connection security rule.

You need to ensure that Server1 can respond to the unencrypted tracert commands initiated from computers on the same network.

What should you do from Windows Defender Firewall with Advanced Security?

Options:

- A- From the IPsec Settings, configure IPsec defaults.
- B- Create a new custom outbound rule that allows ICMPv4 protocol connections for all profiles.
- C- Change the Firewall state of the Private profile to Off.
- D- From the IPsec Settings, configure IPsec exemptions.

Answer:

D

Question 4

Question Type: MultipleChoice

You have a server named Server1 that runs Windows Server. You install System Insights on Server 1.

You need to modify the schedule for storage consumption forecasting. What should you use?

Options:

- A- Server Manager
- B- Windows Admin Center
- C- Performance Monitor
- D- Resource Monitor

Answer:

B

Question 5

Question Type: MultipleChoice

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.

You import the Azure Migrate appliance as VM1.

You need to register VM1 with Azure Migrate.

What should you do in Azure Migrate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

Options:

- A- Create a project.
- B- Add a migration tool.
- C- Add an assessment tool.
- D- Generate a project key.
- E- Download the Azure Migrate installer script ZIP file.

Answer:

A, D

Explanation:

<https://docs.microsoft.com/en-us/azure/migrate/how-to-set-up-appliance-hyper-v>

Question 6

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named Appl.

The General tab in App1 Properties is shown in the General exhibit (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server2 shuts down unexpectedly.

You need to ensure that when you start Server2, App1 continues to run on Server2.

Solution: You pause the Server1 node in Cluster1 and then start Server1.

Does this meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 7

Question Type: MultipleChoice

You have two servers named Server1 and Server2 that run Windows Server. Both servers have the Hyper-V server role installed.

Server1 hosts three virtual machines named VM1, VM2, and VM3. The virtual machines replicate to Server2.

Server1 experiences a hardware failure.

You need to bring VM1, VM2, and VM3 back online as soon as possible.

From the Hyper-V Manager console on Server2, what should you run for each virtual machine?

Options:

- A- Start
- B- Move
- C- Unplanned Failover
- D- Planned Failover

Answer:

C

Explanation:

<https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/manage/set-up-hyper-v-replica>

Question 8

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result,

these questions will not appear in the review screen.

You have an on-premises server named Server1 that runs Windows Server.

You have a Microsoft Sentinel instance.

You add the Windows Firewall data connector in Microsoft Sentinel.

You need to ensure that Microsoft Sentinel can collect Windows Firewall logs from Server1.

Solution: You onboard Server1 to Microsoft Defender for Endpoint.

Does this meet the goal?

Options:

A- Yes

B- No

Answer:

A

Question 9

Question Type: MultipleChoice

You have an on-premises server named Served that runs Windows Server. You have an Azure subscription. You plan to back up the files and folders on Server1 to Azure by using Azure Backup. You need to define how long the backups will be retained. What should you use to configure the retention?

Options:

A- Backup center

B- Windows Server Backup

C- the Microsoft Azure Recovery Services (MARS) agent

D- a Recovery Services vault

Answer:

B
