Question 1

Question Type: MultipleChoice

A hypervisor can independently manage and monitor the virtualization of multiple virtual servers, and is therefore associated with the _____ mechanism.

Options:

A- pay-for-use monitor
B- automated scaling listener
C- multi-device broker
D- None of the above.

Answer:

D

Question 2

Question Type: MultipleChoice

A cloud provider is deploying a new SaaS product comprised of a cloud service. As part of the deployment, the cloud provider wants to publish a service level agreement (SLA) that provides an availability rating based on its estimated availability over the next 12 months. First, the cloud provider estimates that, based on historical data of the cloud environment, there is a 30% chance that the physical server hosting the cloud service will crash and that such a crash would result in 2 days of downtime before the cloud service could be restored. It is further estimated that there is a 100% chance that, over the course of the 12 month period, there will be various attacks on the cloud service, resulting in a total of 60 hours of additional downtime. Based on these estimates, the availability that needs to be published in the SLA is _____ (rounded to one decimal).Choose the correct answer.

Options:

A- 99.2%
B- 99.4%
C- 99.6%
D- 99.9%

Answer:

A

Question 3

Question Type: MultipleChoice

Which of the following statements are true about the failover system mechanism?

Options:

A- A failover system can only be used for legacy batch programs.
B- A failover system cannot span over more than one geographical region.
C- A failover system can be used to make redundant implementations of the same cloud service.
D- A failover system can be used to avoid introducing cloud services as single points of failure.

Answer:

C, D

Question 4

Question Type: MultipleChoice

Users report that they are unable to access a virtual server. Which option best commands would allow the network administrator to verify the current network settings within the virtual server?

Options:

A- nbtstat
B- tftp
C- telnet
D- arp
E- ping
F- ipconfig

Answer:

F

Question 5

Question Type: MultipleChoice

A company wants to streamline their reporting tools. They have decided to implement a third party SaaS cloud reporting tool to process additional data, but will continue to process confidential data internally. Which of the following deployment models is BEST suited for the company?

Options:

A- Shared
B- Private
C- Hybrid
D- Community

Answer:

C

Question 6

Question Type: MultipleChoice

Which of the following statements are true about cloud-based IT resources?SELECT ALL THAT APPLY

Options:

A- A cloud-based IT resource can exist as a physical or virtual IT-related artifact.
B- A cloud-based IT resource resides inside a cloud environment.
C- For an IT resource to be considered a cloud-based IT resource, it needs to be made directly available to cloud service consumers.
D- For a cloud-based IT resource to be made available to cloud service consumers, it needs to be accessible as a cloud service agent.

Answer:

A, B

Question 7

Question Type: MultipleChoice

Which of the following cloud computing mechanisms helps enable on-demand usage by allowing cloud services to be configured to support higher usage thresholds automatically, and within pre-defined parameters?

Options:

A- pay-for-use monitor
B- automated scaling listener
C- multi-device broker
D- resource replication

Answer:

B

Question 8

Question Type: MultipleChoice

Which option best cloud models would be used when implementing a company's email system in the cloud?

Options:

A- PaaS
B- IaaS
C- SaaS
D- XaaS

Answer:

C
