How do you implement the block?

Options:

A- Create a user view mode with user name and picture Add a user reference field to one of your block types and let the user reference field use the new user view mode

B- Add a custom block and select the type 'user account information', activate the user name and picture fields

C- Install the user_blocks module from Drupal org, select the fields you need and place block via block layout

D- Create a new Users View with user name field and user picture and an exposed filter on uid Add a block display to the view and place the block in the block layout

Answer:

D

Question Type: MultipleChoice

Your company has multiple offices around the world, each of which has its own detail page on the company website Offices will be added regularly by the content maintenance team, with each office assigned to one of a limited number of global regions You've been asked to create a directory page listing all of these offices, grouped by region In order to keep the list of regions small, you've been asked to make sure that only site administrators can create, modify, or delete regions.

What kind of Drupal content architecture would best support this?

Options:

A- Create an 'Office' content type and a 'Region' content type The 'Region' content type includes a node reference field that can contain multiple office nodes.

B- Create an 'Office' content type and a 'Regions' taxonomy vocabulary Office nodes are assigned to regions using a term reference field on the 'Office' content type

C- Each office is a 'Basic page' node The office's regional location should be listed in the node's body text

D- Create a 'Regions'' taxonomy vocabulary Each office is a 'Basic page' node, assigned to its region using a term reference field added to the 'Basic page' content type

Answer:

Question Type: MultipleChoice

An English language site is being translated to add Spanish and German versions, and you want to make it as easy as possible for Spanish or German speakers to see the correct translation.

What are three methods for displaying a translated page to a site visitor without using custom code'? Choose 3 answers

Options:

A- Set up path prefixes or domains for each language, and enable the option to select the language from the URL

- B- Enable the option to detect the language from the browser's language settings.
- C- Create a splash page with a List of available languages
- D- Enable geolocation and load the language based on the location of the site visitor's request
- E- Turn on the 'User' detection method, to follow the user's language preference.

Answer:

B, C, E

Question Type: MultipleChoice
