## Question 1

---

### Question Type: MultipleChoice

---

Which of the following statements about SmartVirtualization heterogeneous virtualization software is used to identify and handle compatibility issues between heterogeneous storage devices in a timely manner?

#### Options:

---

- A- The physical space required by the eDevLUN data volume occupies the space of the local storage system,
- B- LUNs in the SmartVirtualization heterogeneous storage system are mapped to the local storage system. Therefore, you can discover the LUNs in the local storage system. However, the data is not managed by the local storage system.
- C- An eDevLUN data volume is a logical abstraction of external LUN data-
- D- In the SmartVirtualization feature, heterogeneous storage systems include only storage systems of other mainstream vendors.

#### Answer:

---

B

## Question 2

---

**Question Type: MultipleChoice**

---

Which of the following is applicable to file-level migration in cloud data center migration scenarios?

**Options:**

---

- A-** The planned disk space of the destination VM is expanded or reduced compared with that of the source VM.
- B-** Hosts containing a large number of small files
- C-** Ensure that the partition structure is consistent with that on the source end.
- D-** Host with high disk usage

**Answer:**

---

D

## Question 3

---

**Question Type: MultipleChoice**

---

The SmartVirtualization feature, such as heterogeneous virtualization software, uses different compatibility policies for storage devices of different vendors to identify and handle compatibility issue\* between heterogeneous devices in a timely manner. Which of the following &

an incorrect application scenario?

**Options:**

---

- A- Heterogeneous DR
- B- Service data migration between storage systems
- C- Ensure the performance of key services
- D- Centralized storage resource management

**Answer:**

---

A

## Question 4

---

**Question Type: MultipleChoice**

---

In a data center migration scenario, which of the following is not an advantage of Huawei LUN copy technology?

**Options:**

---

- A- Data migration is completed by Huawei storage systems and does not require server computing resources,
- B- Simple operation and unified solution
- C- Online service migration
- D- The LUN copy migration solution supports data migration between most Huawei storage devices and is highly compatible.

**Answer:**

---

D

## Question 5

---

**Question Type:** MultipleChoice

---

During the migration evaluation of carrier data centers, a large number of application technologies may exist on the live network. Therefore, it is difficult to manually collect and analyze data.

**Options:**

---

- A- True
- B- False

**Answer:**

---

A

## Question 6

---

**Question Type:** MultipleChoice

---

In the server migration scenario, the ERP application system on a UNIX server is migrated to another UNIX server without recompilation or development. The hardware platform of the target server can be different from that of the source server.

**Options:**

---

A- True

B- False

**Answer:**

---

B

## Question 7

---

**Question Type: MultipleChoice**

---

Which of the following services are supported by Huawei FusionCloud 6.X?

**Options:**

---

**A-** OBM5

**B-** NVE

**C-** DECS

**D-** DVPC

**Answer:**

---

C
