## Question 1

---

**Question Type:** MultipleChoice

---

Which of the following are NAS EMM? (multiple choice)

### Options:

---

- A- Attach
- B- Tracking area update
- C- Authentication
- D- EPS bearer setup

### Answer:

---

A, B, C

## Question 2

---

**Question Type:** MultipleChoice

---

In the LTE test, which value is the largest for application layer rate, PDCP layer rate, MAC layer rate, and physical layer rate?

**Options:**

---

- A- Application layer rate
- B- PDCP layer rate
- C- MAC layer rate
- D- Physical layer rate

**Answer:**

---

D

## Question 3

---

**Question Type: MultipleChoice**

---

Among the following random access scenarios, which are the contention-based scenarios? (multiple choice)

**Options:**

---

- A- Initial access in idle mode
- B- RRC reestablishment after the out-of-synchronization of the wireless link
- C- Switch to a new cell
- D- Uplink out-of-synchronization state requires downlink data transmission
- E- Upstream out-of-synchronization status requires upstream data transmission

**Answer:**

---

A, B, E

## Question 4

---

**Question Type: MultipleChoice**

---

Regarding the description of TA, which of the following options is wrong?

**Options:**

---

- A- In the EPS network, the basic unit of location management is the TA list (tracking area List)
- B- A TA list includes one or more TAs
- C- The purpose of using the TA list is to prevent the UE from frequently initiating the tracking area update (TAU) process
- D- The TA list is issued to the UE when the bearer is activated

**Answer:**

---

D

## Question 5

---

**Question Type:** MultipleChoice

---

The path loss value obtained from the link budget is the median value. The actual path loss fluctuates within this value. In order to ensure a certain edge coverage probability (such as >75%), a certain margin needs to be left. This margin is mainly related to the radio wave. Which of the following characteristics of propagation are irrelevant? (multiple choice)

**Options:**

---

- A- Frequency selectivity

- B- Fast fading
- C- Depolarization
- D- Shadow fading

**Answer:**

---

A, B, C

## Question 6

---

**Question Type:** MultipleChoice

---

Which signaling is triggered by the statistics of the successful RRC connection establishment?

**Options:**

---

- A- RRC connection setup
- B- RRC connection request
- C- RRC connection setup complete
- D- RRC connection reconfiguration complete

**Answer:**

---

C

## Question 7

---

**Question Type:** MultipleChoice

---

How long is the dispatch period of SIB1 messages?

**Options:**

---

A- 10ms

B- 20ms

C- 40ms

D- 80ms

**Answer:**

---

D

## Question 8

---

**Question Type:** MultipleChoice

---

Which layer of the LTE air interface performs the functions of encryption and integrity protection?

**Options:**

---

A- PDCP

B- RLC

C- MAC

D- PHY

**Answer:**

---

A

## Question 9

---

**Question Type:** MultipleChoice

---

In high-speed and poor SINR scenarios, which is the best adaptive transmission mode?

**Options:**

---

- A- Open loop transmission diversity
- B- Closed loop transmission diversity
- C- Open-loop spatial reuse
- D- Closed-loop spatial reuse

**Answer:**

---

A
