Question 1

Question Type: MultipleChoice

Exhibit.

A user cannot save a file on an ONTAP SMB share.

Referring to the exhibit, which action allows the user to save the file?

Options:

- A-** Allow the file type *, rtf In the CIFS Server fpolicy.
- B-** Let the user save the file to a writeable location.
- C-** Synchronize the ONTAP Cluster time to the Active Directory time.
- D-** Set the user permission for the share to write.

Answer:

B

Question 2

Question Type: MultipleChoice

Your company has purchased two NetApp AFF A400 HA pairs. During deployment, how many root aggregates are created?

Options:

A- 6

B- 4

C- 2

D- 8

Answer:

B

Question 3

Question Type: MultipleChoice

Which two storage efficiency features are enabled by default on AFF systems? (Choose two.)

Options:

A- LUN-level compression

- B-** aggregate-level compression
- C-** aggregate-level inline deduplication
- D-** volume-level Inline deduplication

Answer:

C, D

Question 4

Question Type: MultipleChoice

Exhibit.

Op	Size	Total	Failed	Latency(ms)			Throughput
				min	max	avg	
PUT	4MB	50000	0	273	10500	719	277.3MB
GET	4KB	5000000	0	4	9591	38	48.46MB
GET	8KB	5000000	9	5	10021	37	123.3MB
GET	32KB	5000000	0	7	7889	60	475.3MB
GET	256KB	2125276	0	21	7838	450	530.7MB

You have a NetApp AFF A400 HA pair with Fabric Pool enabled on all data using the snapshot-only policy. Users are reporting slow restores when they recover files with the Windows Previous Versions tab.

Referring to the exhibit, what is the highest latency seen on restore?

Options:

- A- 10500
- B- 10021
- C- 9591
- D- 7889

Answer:

B

Explanation:

the user retrieve files, which is a GET operation. You can use the S3 GET Object request to retrieve an object from an S3 bucket.

Question 5

Question Type: MultipleChoice

When you perform an upgrade using ONTAP System Manager 9.8, which two statements are true? (Choose two.)

Options:

- A-** The latest available Images will appear In the ONTAP System Manager interface.
- B-** The images will be automatically uploaded to the cluster by using the ONTAP System Manager interface from the NetApp Support site.
- C-** The update history is available within the ONTAP System Manager interface.
- D-** The Images must be manually uploaded to the cluster by using the ONTAP System Manager interface.

Answer:

C, D

Question 6

Question Type: MultipleChoice

Exhibit.

You have an SVM-DR relationship as shown in the exhibit. You are given a new requirement to use SnapMirror Synchronous (SMS) for the data volumes in NFS-SVM-01.

In this scenario, which solution is supported to enable SMS in ONTAP 9.8 software?

Options:

- A-** Set up new SM-S relationships from the AFF A220 to a new destination.
- B-** Set up new SM-S relationships from the FAS2720 to a new destination.
- C-** Set up NetApp Cloud Sync with a cloud broker in AWS to replicate to a new destination.

D- Modify the existing SVM-DR policy to use sync mode.

Answer:

C

Question 7

Question Type: MultipleChoice

Your company runs a NetApp AFF A220 cluster as a file server for NFS and SMB. You want to use one of the unused ports to connect a single Windows host directly, using FC. You have converted the UTA2 ports e0e and e0f to FC and equipped them with a 16-Gbps FC transceiver. Your Windows host fails to connect to the storage.

In this scenario, which action solves the problem?

Options:

A- Use an FC switch between storage and host.

B- Use the arbitrated loop topology on storage and host.

C- Use the point-to-point topology on all ports.

D- Use an Ethernet switch between storage and host.

Answer:

A

Explanation:

You can configure FC and FC-NVMe SAN hosts with single nodes through one or more fabrics. N-Port ID Virtualization (NPIV) is required and must be enabled on all FC switches in the fabric. You cannot directly attach FC or FC-NMVE SAN hosts to single nodes without using an FC switch.

Question 8

Question Type: MultipleChoice

Exhibit.

```

cluster::> network interface show -vserver SVM_A -fields data-protocol
vserver      lif      data-protocol address
-----
SVM_A        lif-SVM-A      nfs,cifs      10.0.1.250

cluster::> volume show -fields vservers,volume,aggregate,policy,junction-path -vserver SVM_A
vservers volume      aggregate policy      junction-path
-----
SVM_A    SVM_A_root aggr1      policy-vol_a /
SVM_A    VOL_A      aggr2      policy-vol_a -
2 entries were displayed.

cluster::> export-policy rule show -vserver SVM_A -policyname policy-vol_a
Vserver      Policy      Rule      Access      Client      RO
-----
Name          Index      Protocol Match
-----
SVM_A        policy-vol_a  1          any      10.0.1.0/24      any

```

A Linux host with the 10.0.1.24 IP address is unable to mount the VOL_A volume using NFSv3.

Referring to the exhibit, what is the problem?

Options:

- A-** The host IP address does not match the export policy rule.
- B-** The volume is in read-only.
- C-** The volume is not mounted in the namespace.
- D-** The logical interface does not allow the NFSv3 protocol.

Answer:

C

Explanation:

The volume is not mounted in the namespace. <https://docs.netapp.com/ontap-9/index.jsp?topic=%2Fcom.netapp.doc.cdottamg-nfs%2FGUID-8E400D78-B405-4682-8F33-143783F2D580.html>

Even if the volume was read only it could be mounted - also the client IP is in the desired range and LIF is configured for NFS.

Question 9

Question Type: MultipleChoice

After attempting to perform an ONTAP upgrade. It falls during the pre-check. In this scenario, what would cause this problem?

Options:

A- encrypted volumes

- B-** offline volume
- C-** Idle SnapMirrors
- D-** offline data LIF

Answer:

C

Question 10

Question Type: MultipleChoice

Which configuration is supported using NetApp's All SAN Array (ASA)?

Options:

- A-** 24-node cluster
- B-** single node cluster
- C-** 2-node cluster
- D-** 12-node cluster

Answer:

C
