Question 1

Question Type: MultipleChoice

You have completed a successful installation of a Pentaho server on Linux.

You now need to write a script to run the Pentaho server as a service.

Which two files should you call from the script? (Choose two.)

Choose 2 answers

Options:

A- start-pentaho.sh
B- start-pentaho-debug.
C- import-export.sh
D- stop-pentaho.sh

Answer:

A, B

Question 2

Question Type: MultipleChoice

To simplify the migration of a PDI solution from one environment to another, you need to externalize all database connection details.

Which two methods will satisfy this requirement? (Choose two.)

Choose 2 answers

Options:

A- Use the Data Source Wizard to generate the connection details.
B- Create a properties file that includes the connection details and use the Set Variables step to load these properties.
C- Use Manage Data Source to create a new connection in Spoon.
D- Set the connection details in the Kettle properties file.

Answer:

A, D

Question 3

Question Type: MultipleChoice

You need to load data from many CSV files into a database and you want to minimize the number of PDI jobs and transformations that need to be maintained.

In which two scenarios is Metadata injection the recommend option? (Choose two.)

Choose 2 answers

Options:

A- When the files have a different structure and have different target tables.
B- When the files have a different structure and have the same target table.
C- When the files have the same structure and have different target tables.
D- When the files have the same structure and have the same target table.

Answer:

B, D

Question 4

Question Type: MultipleChoice

You are connecting to a secure Hadoop dueler from Pentaho and want to use impersonation.

Which Pentaho tool should you use?

Options:

A- Pentaho Report Designer
B- Pentaho Spoon
C- Pentaho Security Manager
D- Pentaho Server

Answer:

A

Question 5

Question Type: MultipleChoice

When deploying your work lo the Pentaho server, which configuration Me should you review to ensure that the environment variable information is moved correctly?

Options:

A- repositories.xml
B- shared.xml
C- kettle.properties
D- context.xml

Answer:

D

Question 6

Question Type: MultipleChoice

In a PDI transformation you are retrieving data from a large lookup table using a Database Lookup step from improve performance, you enable caching in the step and use the Load all data from table option.

In this scenario, which three statement s are correct about the data flow of the 'Database Lookup step? (Choose three.)

Options:

A- When caching is enable, only rows with matching lookup values will passed through.
B- There must be enough allocated heap space to store the lookup fields allocated heap space to store the lookup fields in memory.
C- Cached comparisons are case sensitive.
D- Every input row must have only one matching row in the lookup table
E- Only one matching row is used from the Lookup table.

Answer:

A, B, C

Question 7

Question Type: MultipleChoice

What are two ways to schedule a PDI job stored in the repository? (Choose two.)

Select 2 answers

Options:

A- Write a login script to start the timer and execute a kitchen script specifying a job in the repository.
B- Use the pan script specifying a job in the repository and schedule it using cron.
C- Use the kitchen script specifying a job in the repository and schedule it using cron.
D- Use Spoon connected to the Pentaho repository and choose Action > Schedule in the menu.

Answer:

B, C

Explanation:

https://help.hitachivantara.com/Documentation/Pentaho/8.1/Products/Data_Integration/Schedule_Perspective#:~:text=or%20kitchen%20commands.-,Schedule%20a%20Transformation%20or%20Job,The%20Schedule%20window%20appears.

Question 8

Question Type: MultipleChoice

Which content is found in the kettle, properties files?

Options:

A- stared database objects
B- global variables
C- default language translations
D- repository connection properties

Answer:

A

Question 9

Question Type: MultipleChoice

Which PDI step or entry processes data within the Hadoop cluster?

Options:

A- the Hadoop File Output step
B- the Hadoop Fie Input step
C- the Pentaho MapReduce entry
D- the Hadoop Copy files entry

Answer:

B

Question 10

Question Type: MultipleChoice

You have a PDI job that gets a list of variables followed by three subsequent transformation entries. Since the three subsequent transformation entries are not dependent on each other. You want to execute them at the same time.

According the Hitachi Vantara best practices, how do you accomplish this task?

Options:

A- Select the Run Next Entries in Parallel option for the job entry that gathers variables.
B- Select the Run Next Entries in Parallel option for the three independent transformation entries.

C- Select the Enable Downstream setting from the Hop Bulk Change submenu.
D- Increase the Change Number of Copies to Start option on the input step of each of the subsequent transformations.

Answer:

B
