Question 1

Question Type: MultipleChoice

Why would an organization want to have multiple assessment objects? [0175]

Options:

- A- An organization has multiple business units with varied security requirements
- B- The provider must have published the assessment for inheritance
- C- Relevant controls could differ depending on risks across an organization's implemented systems
- D- Download an assessment's Requirement Statements into an Excel spreadsheet
- E- An organization has multiple platforms that may present unique risks

Answer:

D

Explanation:

Comprehensive and Detailed

Organizations may create multiple assessment objects to reflect differences across:

Business units (e.g., one unit may be healthcare, another financial).

Platforms or systems that present unique risks.

Control applicability, where relevant controls differ due to scope or environment.

Using multiple objects enables tailored assessments that align to organizational risk and compliance needs.

Extract Reference (HITRUST MyCSF Guidance [0175]):

Organizations may define multiple assessment objects when security requirements, risks, or applicable controls differ across units or systems.

Question 2

Question Type: MultipleChoice

An assessed entity is required to comply with six regulatory factors. Must the entity include all six regulatory factors in the scope of their assessment? [0088]

Options:

A- Yes

B- No

Answer:

A

Explanation:

Regulatory factors are applied to scope based on legal, contractual, or regulatory obligations.

If an entity is required to comply with six regulatory factors, then all six must be included in the assessment scope.

Excluding any would result in an incomplete or non-compliant scope.

Extract Reference (HITRUST CSF Scoping Guidance [0088]):

All regulatory factors applicable to the entity's obligations must be included in scope.

Question 3

Question Type: MultipleChoice

Corrective Action Plans (CAPs) can be viewed centrally across multiple assessment objects.

Options:

A- True

B- False

Answer:

A

Explanation:

HITRUST's MyCSF platform allows organizations to manage CAPs centrally. When a CAP is created in one assessment object, it can be tracked and viewed across other assessments. This capability gives organizations a consolidated view of open remediation items, progress, and deadlines. Centralized CAP management supports ongoing compliance by ensuring that unresolved issues are not siloed within individual assessments. It also enables organizations to demonstrate to assessors and stakeholders that CAPs are actively managed across their environment. This central view provides efficiencies for entities undergoing multiple assessments simultaneously.
