Question 1

Question Type: MultipleChoice

What configuration method allows network administrators to centrally manage and distribute network settings to multiple devices?

Options:

- A- TFTP
- B- SNMP
- C- DHCP
- D- NTP

P2P
exams

Answer:

C

Explanation:

DHCP (Dynamic Host Configuration Protocol) allows for centralized management and distribution of network settings.

Question 2

Question Type: MultipleChoice

Which step should be taken after physically installing the servers in the data center during the installation process?

Options:

- A- Configure the network connections
- B- Install the operating system
- C- Run system diagnostics
- D- Perform compatibility testing

P2P
exams

Answer:

A

Explanation:

After physically installing the servers, the next step is to configure the network connections.

Question 3

Question Type: MultipleChoice

Which component is essential to install for monitoring and managing the hardware resources of the Aruba data center solution?

Options:

- A- ArubaOS
- B- Aruba Sensors
- C- Aruba Central
- D- Aruba Management Gateway

Answer:

D

Explanation:

The Aruba Management Gateway is essential to install for monitoring and managing the hardware resources of the Aruba data center solution.

Question 4

Question Type: MultipleChoice

What embedded diagnostic tool in Aruba Data Center helps to identify and resolve network security vulnerabilities?

Options:

- A- Network Insight
- B- ClearPass
- C- RFProtect
- D- Aruba Sensor

Answer:

B

Explanation:

ClearPass is an embedded diagnostic tool in Aruba Data Center that helps to identify and resolve network security vulnerabilities.

Question 5

Question Type: MultipleChoice

What tool in Aruba Data Center can be used to diagnose and resolve issues related to network policies and access control?

Options:

- A- Packet Capture
- B- Aruba Central
- C- ClearPass
- D- Aruba Sensor

Answer:

C

Explanation:

ClearPass in Aruba Data Center is the tool used to diagnose and resolve issues related to network policies and access control.

Question 6

Question Type: MultipleChoice

During the integration phase of a new software solution, what should be done to ensure minimal disruption to ongoing operations within the data center?

Options:

- A- Perform integration during peak hours
- B- Shut down all servers temporarily
- C- Skip the integration process altogether
- D- Conduct thorough testing in a sandbox environment

Answer:

D

Explanation:

Conducting thorough testing in a sandbox environment helps ensure minimal disruption to ongoing operations during software integration.

Question 7

Question Type: MultipleChoice

When planning the low-level design of a data center solution, which of the following factors should be considered?

Options:

- A- Network bandwidth requirements
- B- Server rack color
- C- Outdoor temperature trends
- D- Employee lunch preferences

Answer:

A

Explanation:

Network bandwidth requirements are essential to consider when planning the low-level design of a data center solution.

Question 8

Question Type: MultipleChoice

What configuration method allows network administrators to centrally manage and distribute network settings to multiple devices?

Options:

- A- TFTP
- B- SNMP
- C- DHCP
- D- NTP

Answer:

C

Explanation:

DHCP (Dynamic Host Configuration Protocol) allows for centralized management and distribution of network settings.

Question 9

Question Type: MultipleChoice

When configuring a server in a data center, which of the following settings should be adjusted to control the maximum amount of data that can be transferred in and out of the server?

Options:

- A- Firewall rules
- B- CPU frequency
- C- Bandwidth throttling
- D- Memory allocation

Answer:

C

Explanation:

Bandwidth throttling settings can be adjusted to control the maximum data transfer rate in and out of a server.

Question 10

Question Type: MultipleChoice

When integrating monitoring tools into a data center environment, What is the primary goal?

Options:

- A- Improve server processing speed
- B- Increase energy consumption
- C- Monitor and optimize performance
- D- Reduce network bandwidth

Answer:

C

Explanation:

The primary goal of integrating monitoring tools is to monitor and optimize the performance of the data center environment.

Question 11

Question Type: MultipleChoice

What is the purpose of the Aruba Smart Rate ports during the installation of the solution?

Options:

- A- Manage power consumption
- B- Optimize network performance
- C- Secure data transmission
- D- Implement redundancy protocols

Answer:

B

Explanation:

Aruba Smart Rate ports are used to optimize network performance during the installation of the solution.
