Question 1

As shown in the figure, there are three data packets captured by the administrator on the network. Which of the following statements is incorrect? (Single choice question)

Source destination protocol info

10.0.12.110.0.12.2 TCP50190>telnet(ACK)seq-1Ack=1win=81921en=0

Options:

A) None of these three data packets contain application layer data

B) These three data packets represent the three-way handshake process of TCP

C) The telnet client uses port 50190 to establish a connection with the server

D) The IP address of the telnet server is 10.0.12.1. The IP address of the telnet client is 10.0.12.2

Answer:

D

Question 2

The classic network forwarding method is based on the routing table routing table forwarding. The forwarding method of OpenFlow switches is based on flow table forwarding. Which of these two forwarding

methods is correct?

Options:

A) The routing table has a fixed length. A device can only have one public routing table.

B) The matching method of the routing table is to match the route of the destination network segment with the longest mask.

C) The matching method of the flow table is to match the MAC address and IP address of the flow at the same time.

D) The flow table is variable length. A network device can only have one flow table.

Answer:

A, B

Question 3

Which extension headers are supported by IPv6 packets?

Options:

A) Fragmentation extension header

B) VLAN extension header

C) Destination Option Extension Header

D) Hop-by-hop option extension header

Answer:

A, C, D

Question 4

Question Type: MultipleChoice

Which of the following messages are used for IPv6 stateless address autoconfiguration?

Question 5

Question Type: MultipleChoice

SNMP packets are carried over TCP.

Options:

A) True

B) False

Question 6

Question Type: **MultipleChoice**

Which version of the SNMP protocol below supports encryption features?

Options:

A) SNMPv2c

B) SNMPv1

C) SNMPv2

D) SNMPv3

Answer:

D

Question 7

What is the IEEE802.11 standard corresponding to Wi-Fi6?

Options:

A) 802. llau

B) 802. 1lat

C) 802.1lac

D) 802.1lax

Answer:

D

Question 8

The wireless access controller (AC, Access Controller) is the overall management and control device in the FIT AP architecture. What is wrong about the role of AC in the following description?

Options:

A) AP configuration delivery

B) User access authentication

C) User access control

D) Regardless of the data forwarding method, the user's data packets are forwarded by the AC

Answer:

D

Question 9

Question Type: **MultipleChoice**

The AC can manually specify the source address or source interface for creating the CAPWAP tunnel.

Options:

A) True

B) False

Answer:

A

Question 10

Question Type: MultipleChoice

What is the command for configuring the data forwarding mode on the AC as direct forwarding?

Options:

A) forward-mode turnel

B) forward-mode direct- forward

C) forward mode capwap forward

D) forward-mode direct

Answer:

B

Question 11

Question Type: MultipleChoice

In an IPv4 network, AP supports static and DHCP methods to obtain IP addresses.

Options:

A) True

B) False

Answer:

A
