# Question 1

---

## Question Type: MultipleChoice

---

A computer center plans to purchase a set of Huawei Oceanstor 9000 products as a follow-up storage system. The requirements are as follows:

- (1) The minimum storage system needs to provide a total bandwidth of 3-4GB / s
- (2) storage space can reach 1PB, to meet a single file GB storage
- (3) computer center room requires control deployed in a cabinet use
- (4) Internal computer cluster nodes are now all InfiniBand network

Based on the above information, which of the following configuration suggestions do you think is more suitable for this project?

### Options:

---

- A-** Because computing tasks are designed for large file services, it is more appropriate to deploy with an 8-node OceanStor 9000 C node. The capacity on the use of 4TB SATA, to meet customer needs
- B-** Using Oceanstor 9000 C Node combined with the total bandwidth and total capacity requirements, consider the 8-node configuration 4TB SATA full disk, backend 10GETOE + front-end IB networking
- C-** From the reliability point of view, it is recommended to use the InfoEqualizer function to access the OceanStor 9000 storage through a domain name. The InfoEqualizer DNS segment needs to be considered and OceanStor 9000 back-end to interoperability

**D-** OceanStor 9000 supports front-end 10GE TOE + back-end IB networking, the front-end is easy to log in and manage with the management PC interworking, considering this networking solution can reduce the cost of front-end IB switches.

**Answer:**

---

D

## Question 2

---

**Question Type: MultipleChoice**

---

Which of the following is a description of the WORM feature of OceanStor V3: (Multiple choice)

**Options:**

---

- A-** When the file is locked, the file protection time can be extended or shortened by manual operation
- B-** Locked file system WORM clock is greater than the file atime value, the file will be in an expired state
- C-** When the file is in an append state, after the legal clock of the WORM file system exceeds the file expiration time, the file is moved to expired status
- D-** When the size of the file is 0 bytes, the lock state can be migrated to the additional state

**Answer:**

---

B, C, D

## Question 3

---

**Question Type: MultipleChoice**

---

On the command line of the N8500 (V200R001) clustered NAS system, you run the NFS> share add rw, no\_root\_squas / vx / xscmfs command. Which of the following is correct regarding this?

**Options:**

---

- A-** The client can modify the file system when it accesses it
- B-** It allows asynchronous writes to the file system and writes to the disk of the file system when the operation request is not responding
- C-** It sets the client's root user does not have root privileges to access the NFS shared file system
- D-** NFS shares created can be accessed by all clients

**Answer:**

---

A, D

## Question 4

---

**Question Type:** MultipleChoice

---

Which of the following is correct about the InfoStamper feature of an OceanStor 9000 storage system: (multiple choice)

### Options:

---

- A-** Snapshot does not support nested, that is, the snapshot has been created directory, the parent directory and subdirectories can no longer create a snapshot
- B-** The root directory of the snapshot (that is, the directory used to create the snapshot) does not support deletion
- C-** Hard links are protected by snapshots, soft links are not protected by snapshots
- D-** For a snapshot with an expiration time set, the system automatically deletes the snapshot but does not back up the storage space occupied by the snapshot data after the snapshot expires

### Answer:

---

C, D

## Question 5

---

**Question Type: MultipleChoice**

---

Which of the following is true about the principle of Huawei Oceanstor V3 smart cache: (multiple choice)

**Options:**

---

- A-** When an IO arrives at the storage system, in order to avoid affecting the write performance, the data in the smart cache will not be any changes due to the IO
- B-** When reading the data in the missing smart cache, the smart cache pool directly forwards the read IO request to the HDD
- C-** If OceanStor V3 is shared between services A and B, the same custom smart cache partition can be used
- D-** The system generates a default smart cache partition for each controller by default

**Answer:**

---

B, C, D

## Question 6

---

**Question Type: MultipleChoice**

---

The N8000 file system is based on dynamic hierarchical storage. Through the multi-volume file system, you can achieve the same file system text pieces stored in different levels of storage media, such as hot data and ordinary data stored in the SSD disk and SATA disk.

**Options:**

---

A- True

B- False

**Answer:**

---

A

## Question 7

---

**Question Type: MultipleChoice**

---

The OceanStor VIS6600T includes the following devices:

1. Host
2. VIS 6600T
3. Array

#### 4. Fiber switch

Since there is a certain dependency between the above devices, the power-down needs to be performed according to a certain sequence. Which of the following power-off sequences is correct:

#### Options:

---

A- 4 1 2 3

B- 4 2 1 3

C- 1 2 3 4

D- 3 2 1 4

#### Answer:

---

C

## Question 8

---

**Question Type:** MultipleChoice

---

True or False, the deployment process in a Huawei Active / Standby Disaster Recovery System is as follows:

1. Solution networking
2. Synchronizing data to disaster recovery end
3. Disaster recovery deployment at disaster recovery end
4. Configuration of the protection group
5. Acceptance test

**Options:**

---

**A-** True

**B-** False

**Answer:**

---

A

## Question 9

---

**Question Type:** MultipleChoice

---

Which of the following describes the correct steps of an Oracle database backup?

- 1, backup oracle control file
- 2, backup oracle archive log
- 3, oracle placed in backup mode
- 4, oracle placed in normal mode
- 5, backup oracle data files

**Options:**

---

- A-** 3,5,2,1,4
- B-** 3,1,5,4,2
- C-** 3,5,2,4,1
- D-** 3,5,1,2,4

**Answer:**

---

B
