Question 1

Question Type: MultipleChoice

When attempting to recover a corrupted file system an administrator runs the command `fsck` against the unmounted file system and receives the following error:

```
failure replaying log

Checking the /etc/filesystems file, they see:

/appl/data:
  dev           = /dev/ulv14
  vfs           = jfs2
  log           = /dev/ulv11
  mount         = true
  options       = rw
```

After confirming that the file system is not mounted, what should the administrator do next?

Options:

A- Run `logrcvr /dev/ulv14` .

- B-** Run fsck: with the -F (force) flag.
- C-** Convert the log to INLINE.
- D-** Run logform /dev/u1v11.

Answer:

D

Question 2

Question Type: MultipleChoice

A customer calls to complain about slow workload performance but offers no additional details. What should the administrator do next?

Options:

- A-** Ask the caller for additional details.
- B-** Add two more virtual CPUs by DLPAR operation.
- C-** Increase CPU entitlement by 10%
- D-** Add 10% more memory by DLPAR operation

Answer:

D

Question 3

Question Type: MultipleChoice

Which AIX command displays the types, counts, and percentages of LPAR memory?

Options:

A- lvmo -a -v rootvg

B- iostat

C- vmstat -v

D- mpstat -w 1

Answer:

A

Question 4

Question Type: MultipleChoice

When a user logs in, the processing of their .profile is very slow. Which issue could contribute to the problem?

Options:

- A- The PATH variable contains non-existent directories.
- B- Network issues between the user location and the system.
- C- The user's home file system is full.
- D- A slow NFS mount for their home directory.

Answer:

C

Question 5

Question Type: MultipleChoice

An AIX administrator is struggling with installing RPM packages. When they try to install a package, errors appear that there are prerequisite RPMs that also need to be installed. Which tool can be used to simplify resolving these dependencies?

Options:

A- dpkg

B- installp

C- rpm

D- yum

Answer:

C

Question 6

Question Type: MultipleChoice

When attempting to recover a corrupted file system an administrator runs the command fsck against the unmounted file system and receives the following error:

failure replaying log

Checking the /etc/filesystems file, they see:

```
/appl/data:
  dev           = /dev/ulv14
  vfs           = jfs2
  log           = /dev/ulv11
  mount         = true
  options       = rw
```

After confirming that the file system is not mounted, what should the administrator do next?

Options:

- A- Run logrcvr /dev/ulv14 .
- B- Run fsck: with the -F (force) flag.
- C- Convert the log to INLINE.
- D- Run logform /dev/u1v11.

Answer:

D

Question 7

Question Type: MultipleChoice

When a user logs in, the processing of their .profile is very slow. Which issue could contribute to the problem?

Options:

- A- The PATH variable contains non-existent directories.
- B- Network issues between the user location and the system.
- C- The user's home file system is full.
- D- A slow NFS mount for their home directory.

Answer:

C

Question 8

Question Type: MultipleChoice

An AIX administrator is struggling with installing RPM packages. When they try to install a package, errors appear that there are prerequisite RPMs that also need to be installed. Which tool can be used to simplify resolving these dependencies?

Options:

A- dpkg

B- installp

C- rpm

D- yum

Answer:

C

Question 9

Question Type: MultipleChoice

A customer calls to complain about slow workload performance but offers no additional details. What should the administrator do next?

Options:

- A- Ask the caller for additional details.
- B- Add two more virtual CPUs by DLPAR operation.
- C- Increase CPU entitlement by 10%
- D- Add 10% more memory by DLPAR operation

Answer:

D

Question 10

Question Type: MultipleChoice

Which AIX command displays the types, counts, and percentages of LPAR memory?

Options:

- A- `lvmo -a -v rootvg`

B- iostat

C- vmstat -v

D- mpstat -w 1

Answer:

A
