Question 1

Question Type: MultipleChoice

You are designing an IP fabric ASN scheme using EBGP.

What are two acceptable ranges in this scenario? (Choose two.)

Options:

A- 0-512

B- 100001-199999

C- 64512-65535

D- 4200000000-4294967294

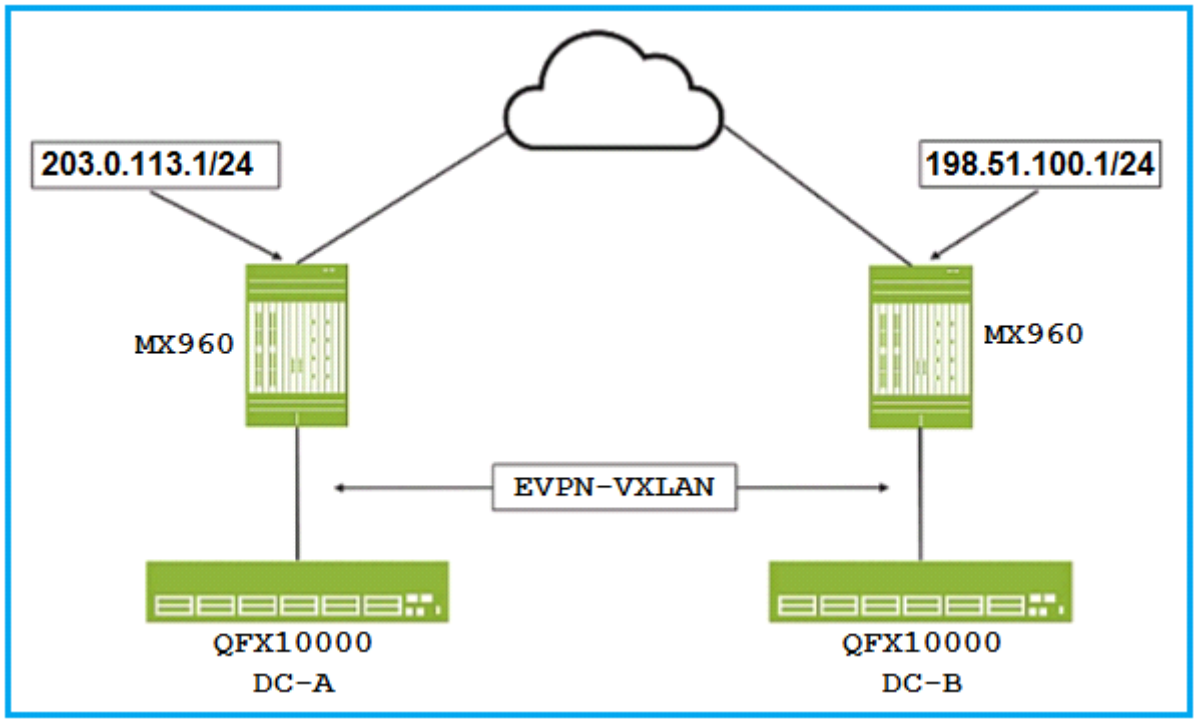
Answer:

C, D

Question 2

Question Type: MultipleChoice

Click the Exhibit button.



You are in discussions with the WAN team about implementing a Data Center interconnect between DC-A and DC-B, as shown in the exhibit.

What are two protocols that would support your Data Center Interconnect requirements? (Choose two.)

Options:

A- Layer 3 VPN

B- OVSDB

C- BGP

D- H-VPLS

Answer:

A, C

Question 3

Question Type: MultipleChoice

You are developing an automation strategy and have been given the requirements below.

The tool chosen must be supported by multiple vendors.

The tool chosen must not install a client on the networking devices.

The tool chosen must support open standards communication methods.

Which tool satisfies the requirements?

Options:

A- Ansible

B- SLAX

C- Chef

D- Puppet

Answer:

A

Question 4

Question Type: **MultipleChoice**

Which protocol is used to exchange control information between the participating multichassis LAG (MC-LAG) peers?

Options:

A- BGP

B- OSPF

C- ICCP

D- VCCP

Answer:

C

Question 5

Question Type: MultipleChoice

Your company wants to expand operations and build small data centers in locations where it is difficult to maintain physical routing equipment. You must recommend a Juniper product that minimizes this issue.

Which product would you recommend in this situation?

Options:

A- MX104

B- vMX

C- vRR

D- Virtual Chassis

Answer:

B

Question 6

Question Type: **MultipleChoice**

Which two Layer 2 Data Center Interconnect redundancy options support active/active forwarding? (Choose two.)

Options:

A- VPLSLAG

B- point-to-point LAG

C- EVPN multihoming

D- VPLS multihoming

Answer:

C, D

Question 7

Question Type: MultipleChoice

Which two statements describe SDN? (Choose two.)

Options:

A- SDN can alleviate the need for manually configuring each network device.

B- SDN moves forwarding functions to a centralized management platform.

C- SDN combines the control plane and the forwarding plane into a single fabric.

D- SDN moves compute intensive functions to a centralized controller.

Answer:

A, D

Question 8

Question Type: MultipleChoice

You are asked to deploy data classification measures in your network. You are analyzing an e-mail and notice several employees in the cc list but the e-mail does not appear to contain any sensitive data, such as security logs or financial reports.

In this scenario, how should this data be classified?

Options:

A- public

B- encrypted

C- restricted

D- private

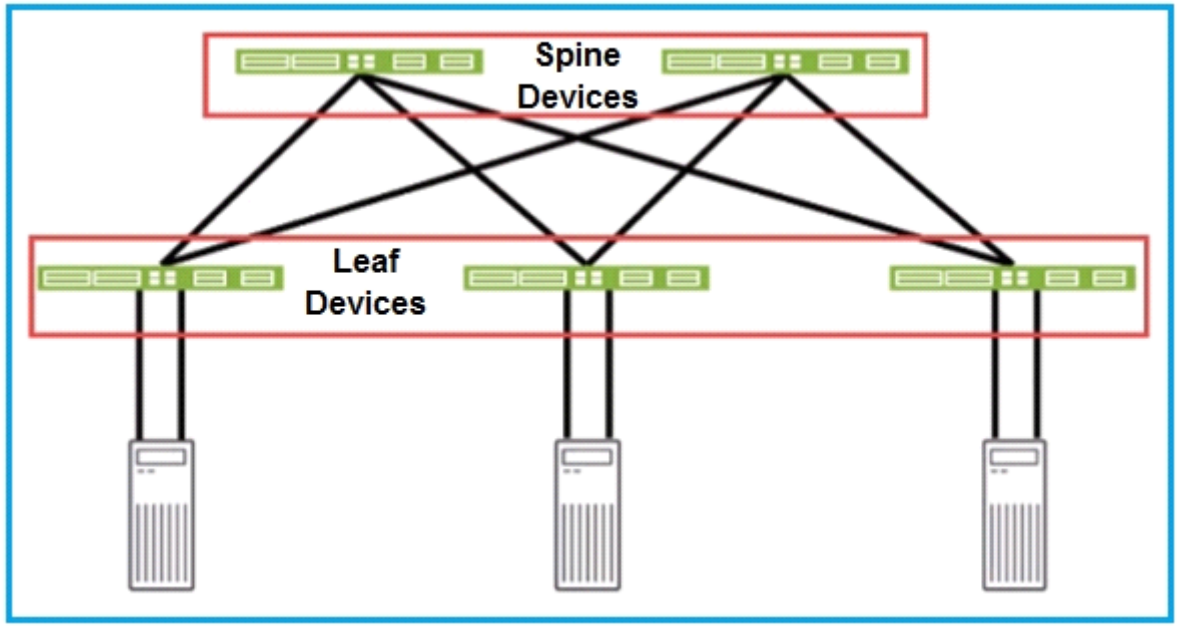
Answer:

D

Question 9

Question Type: MultipleChoice

Click the Exhibit button.



Referring to the exhibit, which two statements are true? (Choose two.)

Options:

A- You should use CoS rewrite rules for traffic coming into the leaf devices.

B- You should use CoS rewrite rules for traffic leaving the leaf devices.

C- You should use CoS rewrite rules for traffic leaving the spine devices.

D- You should use CoS rewrite rules for traffic coming into the spine devices.

Answer:

B, C

Question 10

Question Type: MultipleChoice

You are asked to design security policies based on team membership.

Which access control methodology should you use in this scenario?

Options:

A- non-discretionary access control

B- role-based access control

C- mandatory access control

D- discretionary access control

Answer:

B
