Question 1

Question Type: MultipleChoice

You have just brought online a new site of AP43s. While verifying that everything looks good, you notice that all of the access points (APs) are reporting "insufficient power." The APs are connected to an 802.3at-capable switch.

In this scenario, what would be the cause of the error?

Options:

- A- The cable run to each AP is too long.
- B- The Ethernet cable is plugged into the wrong port on the AP.
- C- The APs' firmware must be upgraded.
- D- LLDP-MED is not configured on the switch.

Answer:

D

Question 2

Question Type: MultipleChoice

Users are complaining about WLAN performance and the Mist dashboard reports non-Wi-Fi interference.

Which diagnostics tool would you use to further investigate this issue on-site and determine the location of the interference?

Options:

- A- spectrum analyzer
- B- protocol analyzer
- C- wireless design software
- D- WLAN scanner

Answer:

A

Question 3

Question Type: MultipleChoice

You are troubleshooting a signal strength issue when you notice that the signal strength changes from -70 to -73 dBm as you move from one room to another.

In this scenario, what is happening?

Options:

A- Signal strength has increased by 10x.

B- Signal strength has decreased by 10x.

C- Signal strength has doubled.

D- Signal strength has halved.

Answer:

D

Question 4

Question Type: MultipleChoice

What is an 802.11 management frame transmitted by an AP?

Options:

A- echo request

B- ping

C- keepalive

D- beacon

Answer:

D

Question 5

Question Type: MultipleChoice

Referring to the exhibit, what do you determine about the site's Time to Connect SLE metric?

Options:

- A- Successful connect averaged 1.6 seconds.
- B- Eighty percent of the Time to Connect failures are related to DHCP failures
- C- All clients cannot connect to the Internet.
- D- Time to Connect Association DHCP failures impacted 80% of users.

Answer:

A

Question 6

Question Type: MultipleChoice

Which statement is correct about a WLAN RF medium?

Options:

- A- A WLAN RF is a full duplex, contention free medium where each client transmits on a separate channel.
- B- A WLAN RF is a full-duplex, contention-free medium where 802.11 stations can transmit and receive at the same time.
- C- A WLAN RF is a half-duplex, shared medium where 802.11 stations contend with each other for access.

D- A WLAN RF is a half-duplex, contention-free medium where the access point polls each station in turn.

Answer:

C

Question 7

Question Type: MultipleChoice

Under ideal conditions, which frequency band will have the farthest usable range?

Options:

A- 900 MHz

B- 2.4 GHz

C- 5 GHz

D- 6 GHz

Answer:

B

Question 8

Question Type: MultipleChoice

You are troubleshooting a signal strength issue when you notice that the signal strength changes from -70 to -73 dBm as you move from one room to another.

In this scenario, what is happening?

Options:

- A- Signal strength has increased by 10x.
- B- Signal strength has decreased by 10x.
- C- Signal strength has doubled.
- D- Signal strength has halved.

Answer:

D

Question 9

Question Type: MultipleChoice

You have just brought online a new site of AP43s. While verifying that everything looks good, you notice that all of the access points (APs) are reporting "insufficient power." The APs are connected to an 802.3at-capable switch.

In this scenario, what would be the cause of the error?

Options:

- A- The cable run to each AP is too long.
- B- The Ethernet cable is plugged into the wrong port on the AP.
- C- The APs' firmware must be upgraded.
- D- LLDP-MED is not configured on the switch.

Answer:

D

Question 10

Question Type: MultipleChoice

Referring to the exhibit, what do you determine about the site's Time to Connect SLE metric?

Options:

- A-** Successful connect averaged 1.6 seconds.
- B-** Eighty percent of the Time to Connect failures are related to DHCP failures
- C-** All clients cannot connect to the Internet.
- D-** Time to Connect Association DHCP failures impacted 80% of users.

Answer:

A
