Question 1

Question Type: MultipleChoice

You are adding an entry to the backend menu. To do so you open a core etc/adminhtml/menu.xml file as a reference. In the file you see the node:

```
<add id="Magento_Catalog::catalog"
    title="Catalog"
    translate="title"
    module="Magento_Catalog"
    sortOrder="20"
    dependsOnModule="Magento_Catalog"
    resource="Magento_Catalog::catalog"/>
```

What is the result of specifying resource="Magento_Catalog::catalog"?

Options:

- A-** The menu item will only be visible to users who are assigned to a role with access to the matching ACL resource
- B-** The menu item will only be visible if the class method specified by the resource returns a true value
- C-** The last selected menu item for a user is stored in the DB so the previously visited page can be restored on the next login
- D-** The resource is used to locate the correct translation for the attributes listed in title="..."

Answer:

A

Question 2

Question Type: MultipleChoice

How do you persist an entity to the database?

Options:

- A- Calling the store() method on the entity's model
- B- Calling the update() method on the entity's collection
- C- Calling the persist() method on the entity's repository
- D- Calling the save() method on the entity's repository

Answer:

D

Question 3

Question Type: MultipleChoice

The module MyCompany_MyModule will add a new page in the admin interface to display a custom entity in a grid.

You created a controller for this grid

`\MyCompany\MyModule\Controller\Adminhtml\CustomEntity\Index`

Which two actions are required to make the new page accessible at the

`https://your.store.base.url/admin/my_module/custom_entity` URL? (Choose two.)

Options:

- A-** Register my_module route for the AdminRouter in MyCompany/MyModule/etc/adminhtml/di.xml
- B-** Create a new menu item in MyCompany/MyModule/etc/adminhtml/menu.xml
- C-** Specify the my_module/custom_entity URL using a @route annotation in the action controller execute() method
- D-** Register my_module route in MyCompany/MyModule/etc/adminhtml/routes.xml

Answer:

C, D

Question 4

Question Type: MultipleChoice

You are implementing a custom module MyModule, which provides an implementation of \Psr\Log\LoggerInterface called \MyCompany\MyModule\Logger.

The LoggerInterface has the default preference declared in app/etc/di.xml.

Keeping upgradability in mind, how do you make \MyCompany\MyModule\Logger the default implementation of the LoggerInterface globally?

Options:

- A-** Declare a new preference for the LoggerInterface in app/code/myCompany/MyModule/etc/frontend/di.xml
- B-** Declare a new preference for the LoggerInterface in MyCompany/MyModule/etc/di.xml
- C-** Overwrite the existing preference for the LoggerInterface in app/etc/di.xml
- D-** Declare a new preference for the LoggerInterface in app/code/MyCompany/MyModule/etc/global/di.xml

Answer:

C

Question 5

Question Type: MultipleChoice

You are working on a custom web API endpoint and have configured it in etc/webapi.xml. This config is cached as part of the config_webservice cache type.

Keeping performance in mind, how do you refresh the cached version of this config using Magento CLI?

Options:

- A- cache:clean config_webservice
- B- cache:refresh config_webservice
- C- cache:flush
- D- cache:purge

Answer:

A

Question 6

Question Type: MultipleChoice

You are writing a customization for the customer module. You need to make sure the configuration files from your module are loaded after the customer module's configuration.

Where should the dependency be declared?

Options:

A- composer.json

B- etc/module.xml

C- etc/config.xml

D- etc/di.xml

Answer:

A

Question 7

Question Type: MultipleChoice

What happens when a category's is_anchor attribute is set to 1?

Options:

- A-** Products without a specified category will be associated with this category
- B-** The customer will see all products from all children of the category
- C-** This is the default category for a website
- D-** The category will always be visible in the menu

Answer:

C

Question 8

Question Type: MultipleChoice

How do you persist an entity to the database?

Options:

- A- Calling the store() method on the entity's model
- B- Calling the update() method on the entity's collection
- C- Calling the persist() method on the entity's repository
- D- Calling the save() method on the entity's repository

Answer:

D
