Question 1

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure pipeline that is used to deploy a web app. The pipeline includes a test suite named TestSuite1. TestSuite1 is used to validate the operations of the web app.

TestSuite1 fails intermittently.

You identify that the failures are unrelated to changes in the source code and execution environment.

You need to minimize troubleshooting effort for the TestSuite1 failures.

Solution: You increase code coverage.

Does this meet the goal?

Options:

A- Yes

B- No

Answer:

A

Question 2

Question Type: MultipleChoice

You have an Azure subscription that contains an Azure Pipelines pipeline named Pipeline1 and an app named App1. Pipeline1 is used to automate the building of App1.

You have a Slack channel named App1chat that includes an incoming webhook.

You need to ensure that when a successful build of App1 is created, a notification is sent to App1chat by using the webhook.

What should you use?

Options:

- A- an alert rule
- B- a notification
- C- an action group
- D- a subscription

Answer:

D

Question 3

Question Type: MultipleChoice

You have a public GitHub repository named Public1.

A commit is made to Public1. The commit contains a pattern that matches a regular expression.

Who is notified first when the commit is made?

Options:

- A- the owner of Public1
- B- the secret scanning partner
- C- the committer
- D- the administrator of the GitHub organization

Answer:

B

Question 4

Question Type: DragDrop

You have a project in Azure DevOps.

You need to configure a dashboard that will provide information on the following metrics.

- * How long it takes to close a work item
- * The number of completed backlog items
- * How long it takes to restore failed services

Which type of widget should you use for each metric? To answer, drag the appropriate widget types to the correct metrics. Each widget type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content

NOTE: Each correct selection is worth one point.

Widgets

- Burndown chart
- Cycle time
- Answer:** Lead time line
- Velocity

Answer Area

- How long it takes to close a work item:
- The number of completed backlog items:
- How long it takes to restore failed services:

Question 5

Question Type: Hotspot

You plan to use Desired State Configuration (DSC) to maintain the configuration of a server that runs Windows Server 2022. The server must have the following features installed:

- * A web server
- * An email server

How should you complete the DSC configuration file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
configuration RequiredFeatures
{
    Import-DscResource -ModuleName PSDesiredStateConfiguration

    Node localhost
    {
        WindowsFeatureSet RequiredWindowsFeatures
        {
```

Answer:

Question 6

Question Type: MultipleChoice

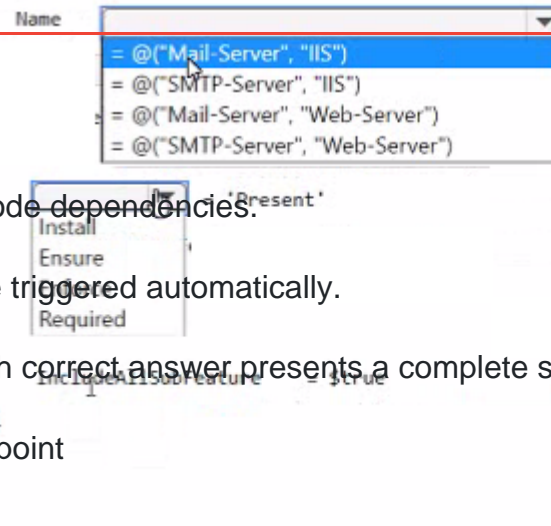

You manage code by using GitHub.

You plan to use Dependabot to scan for code dependencies.

You need to identify when scanning will be triggered automatically.

Which two actions will trigger a scan? Each correct answer presents a complete solution.

NOTE: Each correct solution is worth one point

Options:

A- The dependency graph of a repository changes.

B- Any commit is pushed.

- C- A branch is forked.
- D- A pull request is created.
- E- A new advisory is added.

Answer:

B, D

Question 7

Question Type: OrderList

You have the repositories shown in the following table.

Type	URL
Azure Repos	https://dev.azure.com/contoso/project1/_git/project1.git
GitHub	https://github.com/contoso/project1.git

You need to migrate the contents of the GitHub repository to the Azure Repos repository. The solution must ensure that the Azure Repos repository only contains branches and history from the GitHub repository.

Which three commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Commands

```
git push --mirror https://github.com/contoso/project1.git
```

```
git clone --bare https://github.com/contoso/project1.git
```

```
cd project1
```

```
git clone --bare  
https://dev.azure.com/contoso/project1/_git/project1.git
```

```
cd project1.git
```

```
git push --mirror  
https://dev.azure.com/contoso/project1/_git/project1.git
```

Answer Area

Answer:

git push --mirror...

Question 8

Question Type: MultipleChoice

You have an Azure subscription that contains an Azure container registry. The container registry contains an ACR Tasks task named Task1. Task1 is configured to run once every five days.

You need to trigger Task1 to run immediately.

Which command should you run?

Options:

A- az acr build

B- az acr task run

C- az acr run

D- az acr taskrun

Answer:

B
