Question 1

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

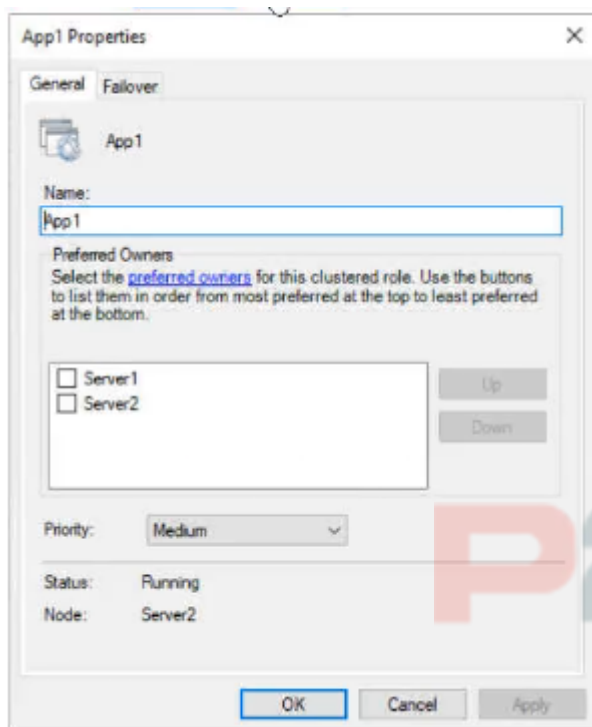

AZ-801 Mix Questions IN THIS CASE STUDY

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

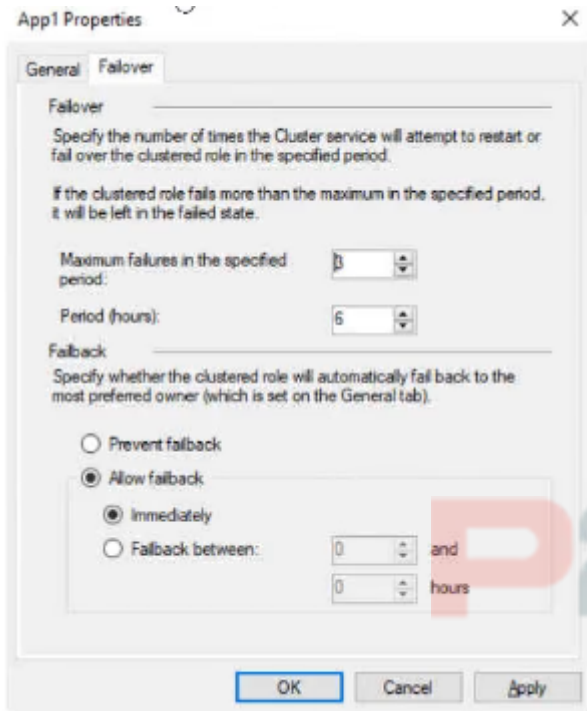

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named App1.

The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.

Solution: From the Failover settings, you select Prevent failback.

Does this meet the goal?

Options:

- A- Yes
- B- No

Answer:

A

Explanation:

The Prevent failback setting will prevent the cluster failing back to Server1.

Question 2

Question Type: OrderList

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a failover cluster named Cluster1.

You need to configure Cluster-Aware Updating (CAU) on the cluster by using Windows Admin Center (WAC).

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Enable CredSSP.	
Add Cluster1 to WAC.	
Add the Cluster-Aware Updating role.	
Add a group managed service account (gMSA).	
Add a WAC gateway.	

P2P exams

Answer:

Add a group managed service account (gMSA).Add Cluster1 to WAC.Enable CredSSP.

Question 3

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.

You import the Azure Migrate appliance as VM1.

You need to register VM1 with Azure Migrate.

What should you do in Azure Migrate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

Options:

- A- Create a project.
- B- Add a migration tool.
- C- Add an assessment tool.
- D- Generate a project key.
- E- Download the Azure Migrate installer script ZIP file.

Answer:

A, D

Explanation:

<https://docs.microsoft.com/en-us/azure/migrate/how-to-set-up-appliance-hyper-v>

Question 4

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have five Azure virtual machines.

You need to collect performance data and Windows Event logs from the virtual machines. The data collected must be sent to an Azure Storage account.

What should you install on the virtual machines?

Options:

- A- the Azure Connected Machine agent
- B- the Azure Monitor agent
- C- the Dependency agent
- D- the Telegraf agent
- E- the Azure Diagnostics extension

Answer:

E

Explanation:

<https://docs.microsoft.com/en-us/azure/azure-monitor/agents/diagnostics-extension-overview>

Question 5

Question Type: Hotspot

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have a Hyper-V failover cluster named Cluster1 at a main datacenter. Cluster1 contains two nodes that have the Hyper-V server role installed. Cluster1 hosts 10 highly available virtual machines.

You have a cluster named Cluster2 in a disaster recovery site. Cluster2 contains two nodes that have the Hyper-V server role installed.

You plan to use Hyper-V Replica to replicate the virtual machines from Cluster1 to Cluster2.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Cluster role to create on Cluster2:

	▼
Distributed Transaction Coordinator (DTC)	
Generic Script	
Hyper-V Replica Broker	
Virtual machine	

Replication target name to specify:

	▼
Cluster2	
The name of a node on Cluster2	
The name of each virtual machine	
The name of the Hyper-V Replica Broker	

Answer:

See the Answer in the Premium Version!

Explanation:

<https://docs.microsoft.com/en-us/virtualization/community/team-blog/2012/20120327-why-is-the-hyper-v-replica-broker-required>

Question 6

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have a failover cluster named Cluster1 that has the following configurations:

Number of nodes: 6

Quorum: Dynamic quorum

Witness: File share, Dynamic witness

What is the maximum number of nodes that can fail simultaneously while maintaining quorum?

Options:

- A- 1
- B- 2
- C- 3
- D- 4
- E- 5

Answer:

C

Explanation:

Note this question is asking about nodes failing 'simultaneously', not nodes failing one after the

other.

With six nodes and one witness, there are seven votes. To maintain quorum there needs to be four votes available (four votes is the majority of seven). This means that a minimum of three nodes plus the witness need to remain online for the cluster to function. Therefore, the maximum number of simultaneous failures is three.

<https://docs.microsoft.com/en-us/windows-server/storage/storage-spaces/understand-quorum>

Question 7

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have an Azure virtual machine named VM1.

You install an application on VM1, and then restart the virtual machine.

After the restart, you get the following error message: "Boot failure. Reboot and Select proper Boot Device or Insert Boot Media in selected Boot Device."

You need to mount the operating system disk offline from VM1 to a temporary virtual machine to troubleshoot the issue.

Which command should you run in Azure CLI?

Options:

- A- az vm repair create
- B- az vm boot-diagnostics enable
- C- az vm capture
- D- az vm disk attach

Answer:

A

Explanation:

<https://docs.microsoft.com/en-us/cli/azure/vm/repair?view=azure-cli-latest>

Question 8

Question Type: DragDrop

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

Your network contains an Active Directory Domain Services (AD DS) domain that has the Active Directory Recycle Bin enabled. The domain contains two domain controllers named DC1 and DC2. The system state of the domain controllers is backed up daily at 23:00 by using Windows Server Backup.

You have an organizational unit (OU) named ParisUsers that contains 1,000 users.

At 08:00, DC1 shuts down for hardware maintenance. The maintenance completes, but DC1 remains shut down.

At 09:00, an administrative error causes the manager attribute of each user in ParisUsers to be deleted.

You need to recover the user account details as quickly as possible. The solution must minimize data loss.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Start DC1 normally.

Perform an authoritative restore on DC1.

Recover all the user objects in the Active Directory Recycle Bin.

Start DC1 by using the Last Known Good Configuration.

Start DC1 in Directory Services Restore Mode.

Perform a system state restore on DC1.

Answer Area

Answer:

See the Answer in the Premium Version!

Question 9

Question Type: Hotspot

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have a failover cluster named Cluster1 that contains three Windows Server nodes named Node 1, Node2. and Node3.

You need to deploy a Storage Spaces Direct virtual disk to Cluster1.

You add the following disks to each node:

- * Three 512-6B NVMe disks
- * Three 3-TB diskS
- * Three 1-TB SSD disks

On Cluster1. you enable Storage Spaces Direct and add the new disks.

What is the total amount of disk space available for the Storage Spaces Direct virtual disk, and which operations are cached for the SSD and HDD disks? To answer, select the appropriate options in the answer area.

The screenshot shows a question interface with a large watermark 'P2P exams' in the background. The question text is as follows:

Disk space available for the Storage Spaces Direct virtual disk:

- 24 TB
- 27 TB
- 36 TB
- 40.5 TB

Cache behavior of the SSD disks:

- Neither read nor write operations are cached.
- Only read operations are cached.
- Only write operations are cached.
- Read and write operations are cached.

Cache behavior of the HDD disks:

- Neither read nor write operations are cached.
- Only read operations are cached.
- Only write operations are cached.
- Read and write operations are cached.

In the screenshot, the '40.5 TB' option is selected with a mouse cursor. In the SSD cache behavior section, 'Read and write operations are cached.' is selected. In the HDD cache behavior section, 'Read and write operations are cached.' is selected.

Answer:

See the Answer in the Premium Version!

Question 10

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

You have an Azure virtual machine named VM1.

You enable Microsoft Defender SmartScreen on VM1.

You need to ensure that the SmartScreen messages displayed to users are logged.

What should you do?

Options:

- A- From a command prompt, run WinRM quickconfig.
- B- From the local Group Policy, modify the Advanced Audit Policy Configuration settings.
- C- From Event Viewer, enable the Debug log.
- D- From the Windows Security app, configure the Virus & threat protection settings.

Answer:

C

Explanation:

Question 11

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

Your network contains an Active Directory Domain Services (AD DS) domain. All domain members have Microsoft Defender Credential Guard with UEFI lock configured in the domain. You deploy a server named Server1 that runs Windows Server. You disable Credential Guard on Server1. You need to ensure that Server1 is MOST subject to Credential Guard restrictions. What should you do next?

Options:

- A- Run the Device Guard and Credential Guard hardware readiness tool
- B- Disable the Turn on Virtualization Based Security group policy setting
- C- Run dism and specify the /Disable-Feature and /FeatureName:IsolatedUserMode parameters

Answer:

B

Question 12

Question Type: MultipleChoice

Case Study: Mix Questions

Mix Questions

AZ-801 Mix Questions IN THIS CASE STUDY

Your company uses Storage Spaces Direct.

You need to view the available storage in a Storage Space Direct storage pool.

What should you use?

Options:

- A- File Server Resource Manager (FSRM)
- B- the Get-StorageSubsystem cmdlet
- C- Disk Management
- D- Windows Admin Center

Answer:

D
