Question 1

Question Type: MultipleChoice

Your network contains an Active Directory Domain Services (AD DS) domain. You need to deploy a Storage Spaces Direct cluster that has nested resiliency. What is the maximum number of nodes you can deploy to the cluster?

Options:

- A- 2
- B- 4
- C- 12
- D- 16
- E- 32

Answer:

A

Question 2

Question Type: MultipleChoice

You have an Azure virtual machine named VM1 that runs Windows Server. VM1 fails to start properly.

You need to review the serial log to identify the issue. What should you use from the VM1 blade in the Azure portal?

Options:

- A- Resource health
- B- Boot diagnostics
- C- Performance diagnostics
- D- Diagnose and solve problems
- E- Change tracking

Answer:

B

Question 3

Question Type: MultipleChoice

Your network contains an Active Directory Domain Services (AD DS) domain. All domain members have Microsoft Defender Credential Guard with UEFI lock configured in the domain. You deploy a server named Server1 that runs Windows Server. You disable Credential Guard on Server1. You need to ensure that Server1 is MOST subject to Credential Guard restrictions. What should you do next?

Options:

- A- Run the Device Guard and Credential Guard hardware readiness tool
- B- Disable the Turn on Virtualization Based Security group policy setting
- C- Run dism and specify the /Disable-Feature and /FeatureName:IsolatedUserMode parameters

Answer:

B

Question 4

Question Type: MultipleChoice

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains domain controllers that run Windows Server 2019 and are configured as shown in the following table.

Name	FSMO role
DC1	PDC emulator
DC2	RID master
DC3	Domain naming master
DC4	Schema master
DC5	Infrastructure master

You plan to run the `adprep /domainprep` command.

Which domain controller should be available for the command to complete?

Options:

- A- DC1
- B- DC2
- C- DC3
- D- DC4
- E- DC5

Answer:

A

Question 5

Question Type: MultipleChoice

You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs Windows Server. The subscription contains the storage accounts shown in the following table.

Name	Performance	Premium account type	Redundancy
storage1	Standard	<i>Not applicable</i>	Geo-redundant storage (GRS)
storage2	Standard	<i>Not applicable</i>	Zone-redundant storage (ZRS)
storage3	Premium	Block blobs	Locally-redundant storage (LRS)
storage4	Premium	File shares	Locally-redundant storage (LRS)

You plan to enable boot diagnostics for VM1.

You need to configure storage for the boot diagnostics logs and snapshots.

Which storage account should you use?

Options:

- A- storage1
- B- storage2
- C- storage3

Answer:

C

Question 6

Question Type: MultipleChoice

You have a server named Served that runs Windows Server 2022 and is part of a three-node failover cluster. You need to upgrade Server1 to Windows Server 2025. The solution must minimize downtime for the cluster. What should you do first?

Options:

- A- Evict Server1 from the cluster.
- B- Update the functional level of the cluster.
- C- Pause Server1 and drain the workloads.
- D- Take the cluster offline.

Answer:

C

Question 7

Question Type: MultipleChoice

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains 20 Active Directory sites. All user management is performed from a central site.

You add users to a group.

You discover that group changes do NOT appear on a domain controller in a remote site.

You need to identify whether the group changes appear on other domain controllers.

What should you use?

Options:

- A- Microsoft Support and Recovery Assistant
- B- File Replication Service (FRS) Status Viewer
- C- Active Directory Replication Status Tool
- D- Active Directory Sites and Services

Answer:

C

Question 8

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains a single-domain Active Directory Domain Services (AD DS) forest named contoso.com. The functional level of the forest is Windows Server 2012 R2. All domain controllers run Windows Server 2012 R2.

Sysvol replicates by using the File Replication Service (FRS).

You plan to replace the existing domain controllers with new domain controllers that will run Windows Server 2022.

You need to ensure that you can add the first domain controller that runs Windows Server 2022.

Solution: You upgrade the PDC emulator.

Does this meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 9

Question Type: MultipleChoice

Your network contains an Active Directory Domain Services (AD DS) domain.

You need to configure a ticket-granting ticket (TGT) lifetime for specific user and computer accounts. The solution must meet the following requirements:

* Minimize the impact on the other user and computer accounts in the domain.

* Minimize administrative effort.

What should you configure?

Options:

- A- an authentication policy and an authentication policy silo
- B- a password policy
- C- a fine-grained password policy
- D- a dynamic access control policy

Answer:

A
