Question 1

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company requires custom validation when users save form records that use a synchronous plug-in.

If validation fails, a message that explains how to resolve the issue must be displayed on the form to the user.

You need to implement the custom validation.

Solution: Include the message in the output parameters of the plug-in.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 2

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company requires custom validation when users save form records that use a synchronous plug-in.

If validation fails, a message that explains how to resolve the issue must be displayed on the form to the user.

You need to implement the custom validation.

Solution: Throw an `InvalidPluginExecutionException` with the message.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Question 3

Question Type: MultipleChoice

You are creating a Power Apps app.

The app must retrieve data from an API that requires two-factor authentication.

You need to configure authentication.

Which type of authentication should you implement?

Options:

- A- Server-to-server
- B- Basic
- C- AP1 key-based
- D- OAuth

Answer:

D

Question 4

Question Type: MultipleChoice

You create a cloud flow to process a list of records using a loop.

You need to determine when to initialize a variable that is used to process the records.

When should you initialize the variable?

Options:

- A- after the first use of the variable inside the loop
- B- after the loop
- C- before the loop
- D- before the first use of the variable inside the loop

Answer:

C

Question 5

Question Type: MultipleChoice

A company designs a Microsoft Dataverse Custom API to encapsulate business logic in it

The Custom API business logic must be encapsulated in a way that does not allow the business logic behavior to be modified or canceled.

You need to set the parameter value of the custom API so it cannot be customized.

Which parameter value should you set?

Options:

- A- Execute Privilege Name to prv. SdkMessageProcessingStep
- B- Binding Type to Entity
- C- Custom Processing Step to None
- D- Enabled for Workflow to No

Answer:

C

Question 6

Question Type: MultipleChoice

A company performs an update to an existing column-bound Power Apps Component Framework (PCF) code component.

You test the changes to the code component in the development environment. You then import the component to the production environment as a part of a managed solution. You observe that the changes to the component are not reflected in the production environment.

You need to ensure that the changes are effective in the production environment.

What should you do?

Options:

- A-** Import the PCF code component to the production environment directly from Visual Studio Code by using the `pac pcf push` instruction.
- B-** Publish the form that uses the PCF code component in the production environment.
- C-** Increment the PCF control version property in the `manifest.xml` file, and then reimport the solution from development to the production environment.
- D-** Publish the PCF code component in the production environment

Answer:

C

Question 7

Question Type: MultipleChoice

A company has a model-driven app form. Many users use the form.

Users state that the form takes too long to fully load.

You need to evaluate the form design to improve loading performance.

Which three control types can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

Options:

A- timeline

B- quick view form

C- iFrame

D- lookup

E- subgrid

Answer:

A, B, D
