Question 1

Question Type: MultipleChoice

What is the purpose of Azure Active Directory (Azure AD) Password Protection?

Options:

- A- to control how often users must change their passwords
- B- to identify devices to which users can sign in without using multi-factor authentication (MFA)
- C- to encrypt a password by using globally recognized encryption standards
- D- to prevent users from using specific words in their passwords

Answer:

D

Explanation:

Explanation

Azure AD Password Protection detects and blocks known weak passwords and their variants, and can also block additional weak terms that are specific to your organization.

With Azure AD Password Protection, default global banned password lists are automatically applied to all users in an Azure AD tenant. To support your own business and security needs, you can define entries in a custom banned password list.
