Question 1

Question Type: MultipleChoice

Which storage type provides access using Amazon S3 APIs?

Options:

- A- object
- B- NAS
- C- inode
- D- SAN

Answer:

A

Explanation:

<https://docs.aws.amazon.com/AmazonS3/latest/userguide/storage-class-intro.html>

Object storage is a type of storage that uses unique identifiers to store and retrieve data as objects. Amazon S3 is an example of an object storage service that provides access using Amazon S3 APIs.

Question 2

Question Type: MultipleChoice

Currently, all of your application workloads store their data on a NetApp AFF cluster. You are required to move 20% of your application workloads to the public cloud by the end of the fiscal year. You also want a flexible payment option as you scale your public cloud footprint.

In this scenario, which NetApp storage offering satisfies the requirements?

Options:

- A- ONTAP Select deployed on a local vCenter Server instance
- B- Cloud Volumes ONTAP bring-your-own-license (BYOL) subscription
- C- Cloud Volumes ONTAP pay-as-you-go (PAYGO) subscription
- D- NetApp FAS cluster deployed in a secondary location

Answer:

C

Explanation:

Cloud Volumes ONTAP is a software-defined storage solution that runs on top of cloud infrastructure and provides advanced data management features for file and block workloads. It allows you to move your application workloads to the public cloud and maintain NetApp ONTAP data efficiencies. A PAYGO subscription lets you pay for the storage resources you consume on an hourly basis, which gives you a flexible payment option as you scale your public cloud footprint¹².

Question 3

Question Type: MultipleChoice

Cloud Manager would be used to manage which two NetApp storage resources? (Choose two.)

Options:

A- NetApp E-Series

B- NetApp Cloud Volumes ONTAP

C- NetApp StorageGRID

D- NetApp All Flash FAS (AFF)

Answer:

B, C

Explanation:

Deliver management that enables you to discover, deploy, and manage your on-premises and cloud-resident NetApp ONTAP systems--- regardless of location, from a single point-of-control.

Cloud Manager is a web-based application that allows you to manage NetApp cloud storage resources across multiple cloud providers. It supports NetApp Cloud Volumes ONTAP, which is a software-defined storage solution that runs on top of cloud infrastructure, and NetApp StorageGRID, which is an object storage solution that can span on-premises and cloud environments.

Question 4

Question Type: MultipleChoice

Which NetApp cloud product is specifically designed for stateful containerized applications?

Options:

- A- Azure NetApp Files
- B- Virtual Desktop Service
- C- Cloud Volumes ONTAP
- D- Astra

Answer:

D

Explanation:

Astra is a NetApp cloud product that provides data management and protection for stateful containerized applications. It allows you to create snapshots, clones, backups, and restores of Kubernetes applications and their persistent volumes.

Question 5

Question Type: MultipleChoice

You want to ensure that the data that is stored in your Azure NetApp Files and on-premises NetApp ONTAP volumes satisfy General Data Protection Regulation (GDPR) engagements. You also want to ensure that the sensitive data is stored in specific locations only.

In this scenario, which NetApp cloud data service accomplishes these tasks?

Options:

- A- Cloud Compliance
- B- Cloud Backup
- C- SnapLock Compliance
- D- Cloud Insights

Answer:

A

Explanation:

Cloud Compliance is a NetApp cloud data service that provides data privacy and security features for Azure NetApp Files and NetApp Cloud Volumes ONTAP. It allows you to scan your data for sensitive information, classify your data by type and location, and generate reports for GDPR compliance.

Question 6

Question Type: MultipleChoice

What must be used for all backup and restore operations with Cloud Backup?

Options:

- A- SnapLock software
- B- SnapCenter software
- C- Cloud Manager
- D- Cloud Sync

Answer:

B

Explanation:

SnapCenter software is a centralized, web-based application that provides backup and restore capabilities for NetApp Cloud Volumes ONTAP and other NetApp storage systems. It allows you to create, manage, and monitor backup policies, schedules, and resources.

Question 7

Question Type: MultipleChoice

You are currently performing all the important administrator and maintenance tasks for your system, and need to delegate work to the staff so that you can attend to other Issues.

Which approach will you take to ensure that your systems are safe?

Options:

- A- Employ mandatory integrity control.
- B- Employ the principle of least privilege.
- C- Provide all users with power user access.
- D- Provide all users with administrator access.

Answer:

B

Explanation:

The principle of least privilege requires that users and applications should only have access to the data and operations they need to perform their tasks, and no more. This reduces the risk of unauthorized access, data breaches, and malicious actions¹².
