Question 1

Question Type: MultipleChoice

Select three. Which three are true in Oracle 19c and later releases?

Options:

- A- Tablespaces always remain in read/write mode during transportable tablespace operations.
- B- Tablespaces never remain in read/write mode during transportable tablespace operations.
- C- A transportable data pump import can leave a plugged-in tablespace in read-only mode.
- D- Simultaneous data pump jobs can be limited at the pluggable database (PDB) level.
- E- A transportable data pump import can leave a plugged-in tablespace in read/write mode.
- F- An ordinary data pump export of a table with encrypted columns will always encrypt the same columns when imported.

Answer:

C, D, E

Question 2

Question Type: MultipleChoice

Choose two. Which two are true about creating RMAN backups for an Oracle container database?

Options:

- A- Control file backups can be created while connected to the root container.
- B- Archived Redo Log backups can be created while connected to an application root CDB.
- C- Control file backups can be created while connected to a nonroot container.
- D- Online Redo Log backups can be created while connected to the root container.
- E- The BACKUP TABLESPACE command can back up a PDB tablespace even if RMAN is connected to CDB\$ROOT.

Answer:

A, E

Question 3

Question Type: MultipleChoice

Choose two. Which two are true about memory advisors?

Options:

- A- If Automatic Memory Management is enabled, no memory advisors are available.
- B- If Automatic Memory Management is enabled, the Shared Pool Advisor and Buffer Cache Advisor are available to set the maximum size for these individual System Global Area components.
- C- All memory advisors use data from Automatic Workload Repository.
- D- If Automatic Shared Memory Management is enabled, both the SGA Advisor and PGA Advisor are always available.
- E- If Manual Shared Memory Management is enabled, only the Shared Pool Advisor and Buffer Cache Advisor are available.

Answer:

C, D

Question 4

Question Type: MultipleChoice

Select three. Which three are true about Audit policies in container databases (CDBs)?

Options:

- A- All audit records are written to the audit trail in CDB\$ROOT .
- B- Application-common unified audit policies defined in an application root must be manually synchronized by each application PDB contained in the application root.
- C- Fine-grained auditing policies defined in an application root must be manually synchronized by each application PDB contained in the application root.
- D- A common unified audit policy can be created at the CDB level.
- E- A common unified audit policy can be created at the application root level.
- F- An application PDB cannot have a local audit policy.

Answer:

B, D, E

Question 5

Question Type: MultipleChoice

In a recent Automatic Workload Repository (AWR) report for your database, you notice a high number of buffer busy waits. The database consists of locally managed tablespaces with free list managed segments. On further investigation, you find that buffer busy waits is caused by contention on data blocks. Which option would you consider first to decrease the wait event immediately?

Options:

- A- Decreasing PCTUSED
- B- Decreasing PCTFREE
- C- Increasing the number of DBWN process
- D- Using Automatic Segment Space Management (ASSM)
- E- Increasing db_buffer_cache based on the V\$DB_CACHE_ADVICE recommendation

Answer:

D

Question 6

Question Type: MultipleChoice

Choose two. Which two are true about diagnosing Oracle Database failure situations using Data Recovery Advisor?

Options:

- A- Data Recovery Advisor can proactively check for failures.
- B- Using the Data Recovery Advisor LIST FAILURE command always requires that the database for which failures are to be listed is in MOUNT state.
- C- Data Recovery Advisor can be used if a database is in the NOMOUNT state.
- D- A failure can be closed only if the database is in MOUNT state.
- E- Data Recovery Advisor can be used if a database is closed.

Answer:

A, B

Question 7

Question Type: MultipleChoice

Select the best answer. Which should be tuned first when doing a performance tuning exercise for an Oracle Database environment?

Options:

- A- log writer performance
- B- database writer performance
- C- general operating system health
- D- SQL statements
- E- database instance memory management and sizes

Answer:

C

Question 8

Question Type: MultipleChoice

Which three statements are true about Flashback Data Archive?

Options:

- A- To use Flashback Data Archive, users must have unlimited quota on the Flashback Data Archive tablespace.
- B- To enable Flashback Data Archive for a table, it is mandatory to have a default Flashback Data Archive for a database
- C- While enabling Flashback Data Archive for a table, if no name is provided for Flashback Data Archive, it is enabled using the default Flashback Data Archive.
- D- A table enabled for Flashback Data Archive cannot be dropped unless Flashback Data Archive is disabled or disassociated first.
- E- Flashback Data Archive prevents flashback queries from getting a snapshot-too-old error.

Answer:

C, D, E

Question 9

Question Type: MultipleChoice

You are working on an Oracle Database 19c database. You enabled the Flashback Database feature. Which two statements regarding flashback logs are true? (Choose two.)

Options:

- A- Flashback logs are not archived.
- B- Flashback logs are maintained in redo log files.
- C- Flashback logs are maintained in the Flash Recovery Area.
- D- Flashback logs are used to maintain Flashback Database related errors.
- E- Flashback logs need to be cleared manually after you disable Flashback Database.

Answer:

A, C
