Question 1

You are creating the authentication portion of an add-in and have several options.

The agents will have access to use the Connect Web Services (CWS) API and session authentication. Each agent will require a unique login to the system, and audit history should be aggregated by a unique agent.

Identify the correct way to handle authentication in an add-in.

Options:

A- Authenticate via a single username and password that is stored in a text file included with the add-in.

B- Authenticate via a customized SAML authentication structure.

C- Authenticate via staff account and session ID by calling prepareConnectsession.

D- Authenticate via username and password that are stored in add-in server configuration variables.

Answer:

C

Question 2

How can you make the Incident.Subject workspace field "required" from within the Workspace Add-in

code?

A)

```
Execute the following command from within the Add-in code:
RecordContext.ExecuteEditorCommand(RightNow.AddIns.Common.EditorCommand.Required,
"IIncident.Subject");
```

B)

```
Execute _recordContext.TriggerNamedEvent("SET_SUBJECT_REQUIRED") from within the Add-
in code and have a workspace rule in the Incident workspace that triggers when the named event
"SET_SUBJECT_REQUIRED" fires. Then set the Incident.Subject field to "required" using the
workspace rule.
```

C)

```
Use the following code:
IIncident incident = (IIncident)_recordContext.GetWorkspaceRecord
(RightNow.AddIns.Common.WorkspaceRecordType.Incident);
incident.Subject.IsRequired = true;
```

D)

Execute the following command from within the Add-in code:

```
GlobalContext.AutomationContext.EditWorkspaceRecord("IIncident.Subject",
ActionType.Required);
```

Options:

A- Option A

B- Option B

C- Option C

D- Option D

Answer:

B

Question 3
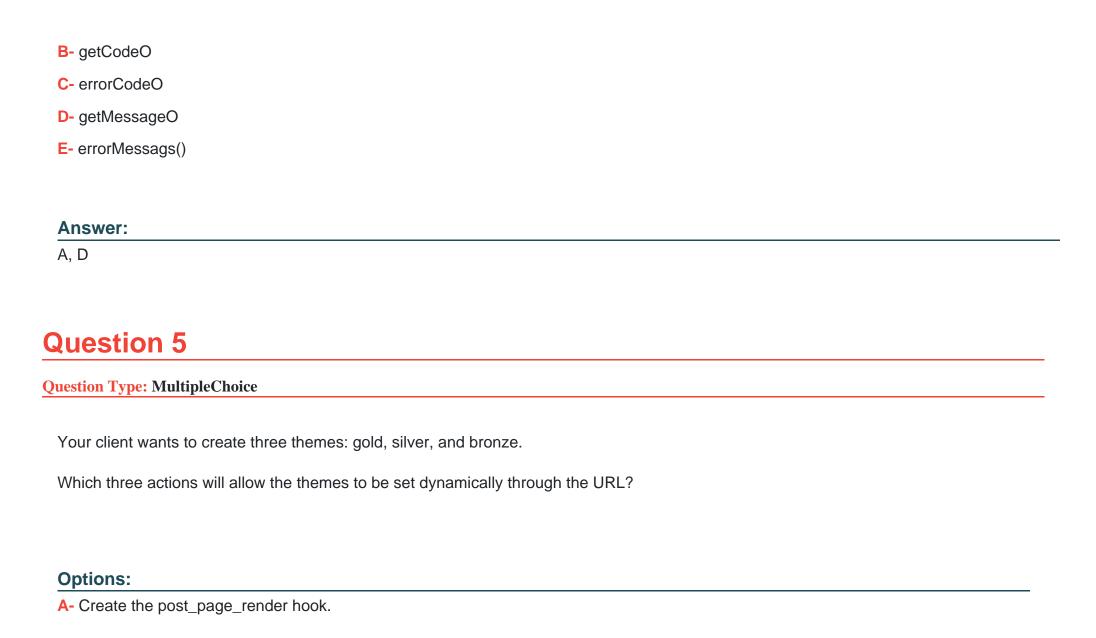

Question Type: MultipleChoice

You have extended the standard Contact model to a custom model named Extendedcontact, which contains the addcustomName ()function. You have completed the mapping in extensions.ymi file already.

What is the correct code to call this function from a custom controller?

A)

```
$CI = get_instance();
$CI->model->custom->Extendedcontact->addCustomName();
```

B)

```
$this->model('Contact')->addCustomName();
```

C)

```
$this->load->model('Extendedcontact');
$this->Extendedcontact->addCustomName();
```

D)

```
$this->load->model->custom->Extendedcontact;
$this->Extendedcontact->addCustomName();
```

E)

```
$CI = get_instance();
$CI->model->custom('Extendedcontact')->addCustomName();
```

Answer:

D

Question 4

Question Type: **MultipleChoice**

Which two methods can be used in the Connect for PHP API to obtain the error code and error text when the connectAPiError exception is thrown?

Options:

A- logMessageO

B- getCodeO

C- errorCodeO

D- getMessageO

E- errorMessags()

Answer:

A, D

Question 5

Question Type: MultipleChoice

Your client wants to create three themes: gold, silver, and bronze.

Which three actions will allow the themes to be set dynamically through the URL?

Options:

A- Create the post_page_render hook.

B- Create a custom model that will, among other things, call the setTheme ( ) method.

C- Create custom controller that will, among other things, call the setTheme ( ) method.

D- Create custom widget that will, among other things, call the setTheme ( ) method.

E- Create the pre_page_r@nder hook.

F- Create themes in mapping.php by using the <m:theme> page tag.

G- Define themes in the template by using the <rn:theme> page tag.

Answer:

B, C, G

Question 6

Question Type: **MultipleChoice**

How can you make the Incident.Subject workspace field "required" from within the Workspace Add-in

code?

A)

Execute the following command from within the Add-in code:

```
RecordContext.ExecuteEditorCommand(RightNow.AddIns.Common.EditorCommand.Required,
"IIncident.Subject");
```

B)

Execute _recordContext.TriggerNamedEvent("SET_SUBJECT_REQUIRED") from within the Add-in code and have a workspace rule in the Incident workspace that triggers when the named event "SET_SUBJECT_REQUIRED" fires. Then set the Incident.Subject field to "required" using the workspace rule.

C)

Use the following code:

```
IIncident incident = (IIncident)_recordContext.GetWorkspaceRecord
(RightNow.AddIns.Common.WorkspaceRecordType.Incident);
incident.Subject.IsRequired = true;
```

D)

Execute the following command from within the Add-in code:

```
GlobalContext.AutomationContext.EditWorkspaceRecord("IIncident.Subject",
ActionType.Required);
```

Options:

A- Option A

B- Option B

C- Option C

D- Option D

Answer:

B

Question 7

Question Type: MultipleChoice

You have extended the standard Contact model to a custom model named Extendedcontact, which contains the addcustomName ()function. You have completed the mapping in extensions.ymi file already.

What is the correct code to call this function from a custom controller?

A)

```
$CI = get_instance();
$CI->model->custom->Extendedcontact->addCustomName();
```

B)

```
$this->model('Contact')->addCustomName();
```

C)

```
$this->load->model('Extendedcontact');
$this->Extendedcontact->addCustomName();
```

D)

```
$this->load->model->custom->Extendedcontact;
$this->Extendedcontact->addCustomName();
```

E)

```
$CI = get_instance();
$CI->model->custom('Extendedcontact')->addCustomName();
```

Options:

A- Option A

B- Option B

C- Option C

D- Option D

Answer:

D

Question 8

Question Type: MultipleChoice

Which two methods can be used in the Connect for PHP API to obtain the error code and error text when the connectAPiError exception is thrown?

Options:

A- logMessageO

B- getCodeO

C- errorCodeO

D- getMessageO

E- errorMessags()

Answer:

A, D

Question 9

You are creating the authentication portion of an add-in and have several options.

The agents will have access to use the Connect Web Services (CWS) API and session authentication. Each agent will require a unique login to the system, and audit history should be aggregated by a unique agent.

Identify the correct way to handle authentication in an add-in.

Options:

A- Authenticate via a single username and password that is stored in a text file included with the add-in.

B- Authenticate via a customized SAML authentication structure.

C- Authenticate via staff account and session ID by calling prepareConnectsession.

D- Authenticate via username and password that are stored in add-in server configuration variables.

Answer:

C

Question 10

Your client wants to create three themes: gold, silver, and bronze.

Which three actions will allow the themes to be set dynamically through the URL?

Options:

A- Create the post_page_render hook.

B- Create a custom model that will, among other things, call the setTheme ( ) method.

C- Create custom controller that will, among other things, call the setTheme ( ) method.

D- Create custom widget that will, among other things, call the setTheme ( ) method.

E- Create the pre_page_r@nder hook.

F- Create themes in mapping.php by using the <m:theme> page tag.

G- Define themes in the template by using the <rn:theme> page tag.

Answer:

B, C, G
