Question 1

Question Type: MultipleChoice

Which two are required to communicate with an Order Management System (OMS) Integration Service when integrating with an OMS from Commerce Cloud? (Choose two.)

Options:

- A- Shopper Profile Update event webhook
- B- Order Submit event webhook
- C- Admin Orders REST API
- D- Custom order management widget

Answer:

A, C

Question 2

Question Type: MultipleChoice

A storefront developer is configuring page layouts of type Shopper Profile for a B2B storefront implementation.

Which two items must be considered when configuring the Profile Navigation -- Account Shoppers widget instance on each layout?
(Choose two.)

Options:

- A-** On the My Account page, account contacts will always see all options defined in the Profile Navigation -- Account Shoppers widget instance
- B-** If displayed using a vertical orientation, the Profile Navigation -- Account Shoppers widget instance should be configured to take up the same number of columns on each layout
- C-** Each entry in the Profile Navigation -- Account Shoppers widget instance settings can only have one corresponding layout specified by the URL
- D-** Each Shopper Profile layout should contain a shared Profile Navigation -- Account Shoppers widget instance

Answer:

A, B

Question 3

Question Type: MultipleChoice

You want a contact with an associated storefront role of Administrator to be able to manage contact registration requests for their account.

What two configuration steps are necessary to implement this functionality? (Choose two.)

Options:

- A-** Add the Contact Login with Self Registration element to support B2B Contact Registration Requests in the Header Widget instance
- B-** Ensure that generated emails for registration requests are enabled to allow the administrator to accept or reject the request directly from the email
- C-** Ensure that the Profile Navigation -- Account Shoppers widget instance supports Registration Requests on My Account for storefront administrators
- D-** Configure the Contact Registration Requests widget settings to specify the storefront role of admin

Answer:

C, D

Question 4

Question Type: MultipleChoice

Which use case does NOT require the use of multiple sites or multiple instances?

Options:

- A-** A company has stores in multiple countries and their stores only differ by the languages and currencies they support
- B-** A company wants to expand their brand to multiple countries with multiple languages and currencies. The stores sell different products and have different promotions, but share shoppers
- C-** A company has two brands with mostly different products. The brand stores have separate carts, payment gateways, and tax providers, with a unique look and feel
- D-** A company operates three distinct brands operating as separate business units with different teams. The brands share no layouts, promotions, content, products, or shoppers

Answer:

C

Question 5

Question Type: MultipleChoice

Which three statements describe webhooks in Commerce Cloud? (Choose three.)

Options:

- A-** Function webhooks support synchronous calls to external applications
- B-** Webhooks are only configured using the Server Extensions REST API
- C-** Event webhooks support asynchronous, event-triggered outbound calls to custom integration endpoints
- D-** Webhooks can be defined separately for Storefront, Preview, and Agent instances
- E-** Webhooks use the POST HTTP method for the outgoing call

Answer:

A, C, E

Explanation:

s0302understandwebhooks01.html

Question 6

Question Type: MultipleChoice

Which three features are supported in a B2B Storefront implementation? (Choose three.)

Options:

- A-** A displaying products and prices that are specific to the logged in contact's account
- B-** managing account buyers and addresses on the storefront by contacts with account specified storefront roles
- C-** simultaneously logging into multiple accounts in order to compare product items and prices
- D-** requiring an order approval based on a specified price threshold associated with the account
- E-** sharing a purchase list with a contact from another account

Answer:

B, C, D

Question 7

Question Type: MultipleChoice

Given the configuration:

Site Name	Catalog	Default Language
Cloud Lake US (default site)	US Catalog	English
Cloud Lake Mexico	Mexican Catalog	Spanish

US Catalog and Mexican Catalog share some of the products.

Which two methods enable a merchandiser to enter Spanish translations in the products? (Choose two.)

Options:

- A- Import the translations by setting LOCALE=es in the CSV import file
- B- Select the site on the Catalog page and edit the products that need Spanish translations
- C- Select Spanish from the Content Language drop-down and create new products with Spanish entries in the relevant fields
- D- Select Spanish from the Content Language drop-down and edit the products that need Spanish translations

Answer:

A, D

Question 8

Question Type: MultipleChoice

A storefront developer is configuring page layouts of type Shopper Profile for a B2B storefront implementation.

Which two items must be considered when configuring the Profile Navigation -- Account Shoppers widget instance on each layout?
(Choose two.)

Options:

- A-** On the My Account page, account contacts will always see all options defined in the Profile Navigation -- Account Shoppers widget instance
- B-** If displayed using a vertical orientation, the Profile Navigation -- Account Shoppers widget instance should be configured to take up the same number of columns on each layout
- C-** Each entry in the Profile Navigation -- Account Shoppers widget instance settings can only have one corresponding layout specified by the URL
- D-** Each Shopper Profile layout should contain a shared Profile Navigation -- Account Shoppers widget instance

Answer:

A, B

Question 9

Question Type: MultipleChoice

Which three statements describe webhooks in Commerce Cloud? (Choose three.)

Options:

- A- Function webhooks support synchronous calls to external applications
- B- Webhooks are only configured using the Server Extensions REST API
- C- Event webhooks support asynchronous, event-triggered outbound calls to custom integration endpoints
- D- Webhooks can be defined separately for Storefront, Preview, and Agent instances
- E- Webhooks use the POST HTTP method for the outgoing call

Answer:

A, C, E

Explanation:
