Question 1

Question Type: MultipleChoice

Which three describe a valid OGG Event Action?

Options:

- A- Stop the process
- B- Write a checkpoint before and/or after writing the record to the trail.
- C- Run a shell command
- D- Purge old trail files

Answer:

A, B, C

Explanation:

In reference guide, page 312, Syntax EVENTACTIONS ([STOP| ABORT | FORCESTOP][IGNORE [TRANSACTION [INCLUDEEVENT]][DISCARD][LOG [INFO | WARNING]][REPORT][ROLLOVER][SHELL<command>][TRACE <trace file> [TRANSACTION] [PURGE | APPEND]][CHECKPOINT[BEFORE | AFTER | BOTH]][, ...])

Question 2

Question Type: MultipleChoice

You have discovered that an OGG checkpoint table has become corrupted. What is your best strategy to recover from this?

Options:

- A-** Use the CONVCHK utility on the target to restore the checkpoint table from checkpoint files.
- B-** Restore the target DB from backup, reposition the Extract to a point prior to the corruption, Turn to HANDLECOLLISIONS in the Replicat.
- C-** Use NODECHECKPOINT to cause Replicat to use the checkpoint files as backup and regenerate the checkpoint table.
- D-** Use the GENCHK utility on the source to restore the checkpoint table from checkpoint files.

Answer:

A

Question 3

Question Type: MultipleChoice

What is the default format for a GoldenGate trail?

Options:

- A- ASCII:ASCII format
- B- INPUT ASCII: from 1to 127 representing ASCII characters
- C- SQL: SQL statements
- D- CDF: Canonical Data format
- E- XML: XML statement

Answer:

A

Question 4

Question Type: MultipleChoice

Which three types of information are stored in the GoldenGate trail header?

Options:

- A- Before or after image indicator
- B- Data type (e.g. integer, alphanumeric)
- C- Relative byte address of the commit record
- D- Time of the transaction

Answer:

A, B, C

Question 5

Question Type: MultipleChoice

When would you use the PASSTHRU parameter?

Options:

- A- When using a data pump to distribute all of the trail data 'as is' to a remote system.
- B- When Extract is processing database transaction logs where you have a remote database connection.
- C- For a SPECIALRUN one-time processing task that is doing an initial load.
- D- When Extract is processing database transaction logs and writing to a local trial that will be read by a local Replicat.

Answer:

A

Question 6

Question Type: MultipleChoice

Ideally which process should be configured purge old trial files?

Options:

- A- Manager

- B- Extract
- C- Replicat
- D- Pump

Answer:

A

Question 7

Question Type: MultipleChoice

Which could be used to map a value stored in a user token to a target column?

Options:

- A- @GETENV
- B- GGHEADER
- C- GGENVIRONMENT
- D- TOKEN

Answer:

D

Question 8

Question Type: MultipleChoice

Which parameter could you use to start an Extract when Manager starts?

Options:

A- START

B- BEGIN

C- AUTOSTART

D- PROCESS

Answer:

C

Question 9

Question Type: MultipleChoice

If multiple GoldenGate processes are accessing a set of trail files which of the processes should include the PURGEOLDEXTRACTS parameter to trigger trail file clean up?

Options:

- A- Manager
- B- Extract
- C- Replicat
- D- Both Extract and Replicat

Answer:

A

Explanation:

In reference guide, page 256, and I quote 'If multiple groups are reading the same set of trail files, one process could purge a file before another is finished with it. Instead, use theManager version of PURGEOLDEXTRACTS, which is the preferred use of the parameter in all

GoldenGate configurations because it allows you to manage trail files in a centralized fashion.'

Question 10

Question Type: MultipleChoice

Which statement correctly explains when you would use ASSUMETARGETDEFS?

Options:

- A- The target tables are already created.
- B- Only the fields in the target tables are mapped.
- C- The source and target tables have identical data structure.
- D- You have specified wildcards in either the TABLE or MAP parameters

Answer:

C

Question 11

Question Type: MultipleChoice

What process is the recommended method to purge old GoldenGate trials?

Options:

- A- Extract r
- B- Replicat
- C- Manager
- D- Manager and Replica

Answer:

C

Question 12

Question Type: MultipleChoice

Which three are required to correctly configure an OGG?

Options:

- A- A maximum file size
- B- An extract process
- C- A trail file identifier
- D- Designation as local or remote

Answer:

B, C, D
