# Question 1

---

**Question Type:** MultipleChoice

---

Which process is responsible for writing the contents of database buffers to data files?

## Options:

---

- A- Process Monitor process (PMON)
- B- Listener Registration process (LREG)
- C- System Monitor process (SMON)
- D- Database Writer process (DBW)
- E- Log Writer process (LGWR)
- F- Checkpoint process (CKPT)

## Answer:

---

D

## Explanation:

---

[http://docs.oracle.com/cd/E11882\\_01/server.112/e25789/process.htm#CNCPT1254](http://docs.oracle.com/cd/E11882_01/server.112/e25789/process.htm#CNCPT1254)

(see database writer process (DBW))

## Question 2

---

**Question Type:** MultipleChoice

---

You want to drop a pluggable database from a multitenant container database that is used for development, which two statements are true?

### Options:

---

- A-** You can drop the PDB only if it is closed.
- B-** You can drop the seed PDB, but you cannot create any other PDB within the CDB.
- C-** You can drop the PDB and keep the data files to be reused by another PDB.
- D-** When you drop the PDB, the data files and redo log files are automatically removed from the storage file system.

### Answer:

---

A, C

**Explanation:**

---

[https://docs.oracle.com/database/121/SQLRF/statements\\_8028.htm#SQLRF55699](https://docs.oracle.com/database/121/SQLRF/statements_8028.htm#SQLRF55699)

## Question 3

---

**Question Type: MultipleChoice**

---

Which two statements are true about a buffer cache?

**Options:**

---

- A-** When a buffer is read from a buffer cache, it may be inconsistent and require undo data to make it consistent.
- B-** A buffer cache stores copies of data blocks from all files of the database.
- C-** Buffer access is kept efficient by maintaining a least recently used (LRU) list for dirty and clean buffers.
- D-** A buffer cache always resides completely in System Global Area (SGA).
- E-** A buffer cache contains exactly three pools: default, keep, and recycle pool.

**Answer:**

---

A, E

## Question 4

---

**Question Type:** MultipleChoice

---

What happens when you execute these SQL statements?

ALTER SYSTEM SET SGA\_TARGET = 992M;

ALTER SYSTEM SET SHARED\_POOL\_SIZE = 0;

ALTER SYSTEM SET LARGE\_POOL\_SIZE = 0;

ALTER SYSTEM SET JAVA\_POOL\_SIZE = 0;

ALTER SYSTEM SET DB\_CACHE\_SIZE = 0;

ALTER SYSTEM SET STREAMS POOL SIZE = 0;

**Options:**

---

- A- The database stops (shutdown abort).
- B- B) The database Stops (shutdown immediate).
- C- You activate Automatic Shared Memory Management.
- D- You get an error message.

**Answer:**

---

C

**Explanation:**

---

<http://www.orafaq.com/forum/t/67825/0/> (see the second post)

## Question 5

---

**Question Type:** MultipleChoice

---

Which normalization level is adopted in real-world database systems?

**Options:**

---

A- 1NF

B- 2NF

C- 3NF

D- BCNF

**Answer:**

---

C

**Explanation:**

---

<http://docs.oracle.com/database/121/DWHSG/ch2logdes.htm#DWHSG9225>

## Question 6

---

**Question Type: MultipleChoice**

---

Examine the command below:

```
BEGIN DBMS_REDACT.ADD_POLICY(  
  
object_schema => 'mavis',  
  
object_name => 'cust_info',  
  
column_name => 'emp_id',  
  
policy_name => 'redact_cust_ids',  
  
function_type => DBMS_REDACT.REGEXP,  
  
expression => '1=1',  
  
regexp_pattern => '(\d\d\d)(\d\d)(\d\d\d\d)',  
  
regexp_replace_string => 'XXXXX\3',  
  
regexp_position => 1,  
  
regexp_occurrence => 0,  
  
regexp_match_parameter => 'i',  
  
policy_description => 'Redacts customer IDs',  
  
column_description => 'emp_id contains employee ID numbers');  
  
END;
```

/

What do the `regexp_pattern` and `regexp_replace_string` parameters accomplish?

### Options:

---

- A-** They find a pattern of nine digits; break the digits into three groups that contain the first three, the next two and then the last four digits; and replace all digits with XXXXX concatenated with the last four digits.
- B-** They find a pattern of six digits; break the digits into two groups that contain the first five, and then the last digit; and replace all digits with XXXXX concatenated with the last digit.
- C-** They find a pattern of nine digits and display the digits as XXXXX XX XXXX.
- D-** They find a pattern of nine digits and display the first five digits as XXXXX and the last four digits as 3333.

### Answer:

---

A

### Explanation:

---

[http://docs.oracle.com/database/121/ASOAG/redaction\\_features.htm#ASOAG925](http://docs.oracle.com/database/121/ASOAG/redaction_features.htm#ASOAG925)

## Question 7

---

**Question Type:** MultipleChoice

---

Which four items exist in the root of a CDB, but not in the PDBs?

### Options:

---

- A- shared UNDO and default database temporary tablespace
- B- Oracle-supplied metadata
- C- shared Oracle-supplied data
- D- CDB views providing information across PDBs
- E- application tablespaces
- F- local temporary tablespaces
- G- local users and local roles
- H- non-shared local metadata

### Answer:

---

A, B, C, D
