Question 1

Question Type: MultipleChoice

Given the following classes and properties:

myco-data-shape (abstract)

area

color

myco-data-shape-rectangle

length

width

myco-data-shape-circle

radius

a page list property .shapes is defined as being of the abstract class myco-data-shape.

select two correct statements. (choose two)

Options:

- A- a rule defined in myco-data-shape-rectangle can modify the. Color property.
- B- pages of shapes can contain. length and. Radius.
- C- A rule existing in myco-data-shape can be overridden in myco-data-shape-circle.
- D- pages of .Shapes can be of either myco-data-Shape-rectangle or myco-data-shape-circle, but all pages must be the same.

Answer:

B, C

Question 2

Question Type: MultipleChoice

A case displays recent customer transaction. Different operators often view the recent transactions

for the same customer repeatedly throughout the day. the operation to fetch the transactions is resource-intensive, and the source data is updated once an hour. select two options to configure a data page to cache the customer transactions and minimize the operator's wait time. (choose two)

Options:

- A- configure the data page scope to node.
- B- configure the refresh strategy to reload of older than 1 hour
- C- configure the data page scope to thread.
- D- configure the refresh strategy to reload once per interaction.

Answer:

A, B

Question 3

Question Type: MultipleChoice

XYZ corp sells products that can be researched and ordered within a single screen. After the user submits the order, only the ID for each ordered product is propagated to a product child case. An additional property within the product child case reference a data page that displays product detail. XYZ wants you to define a report that shows detail about each product associated within a given order case.

In which class do you optimize the detail properties for the product?

Options:

- A- both the order class and product class
- B- the product class
- C- the order class
- D- the data class for the product

Answer:

D

Question 4

Question Type: MultipleChoice

an application to onboard new bank customers create child cases for each account that the customer opens.

You need to configure a report definition that lists new customer cases created in a given day and the average opening balance for all account child cases for each customer.

which reporting feature do you use?

Options:

- A- association
- B- subreport
- C- class join
- D- declare index

Answer:

B

Question 5

Question Type: MultipleChoice

you are writing a report that needs to compute the sum of multipul columns and display the result.

The number of columns to sum varies from report to report but does not exceed five.

which two options can you use to implement this requirement? (choose two)

Options:

- A- Develop a SQL function that sums two columns. Recursively apply this function as needed.
- B- implement a declare expression to sum the values and store the result as an additional property.
- C- construct the report to group by the columns to be summed followed by a column that uses SUM.
- D- Develop separate SQL functions for summing two through five columns. use the appropriate function.

Answer:

A, D

Question 6

Question Type: MultipleChoice

a performance analysis for an equals-comparisons-only query against a table shows that it always performs a full table scan. the table has grown steadily over time. nothing has been done in the database concerning this table other than it being generated by pega.

Options:

- A- limit the number of rows fetched from this table,
- B- add one or more column indexes to this table.

C- Expose one or more columns within this table.

D- alter one or more column types in the table.

Answer:

B

Question 7

Question Type: MultipleChoice

XYZ corp expects managers to create a variety of reports. Those reports are always based on the same set of classes, but every report does not use every class in the set.

to simplify report creation for managers, you create_____

Options:

A- numerous sample reports showing how to join the classes

B- association rules for the classes in this set

C- a template report with every class join predefined

D- a declare trigger that restricts report class joins to this set

Answer:

B

Question 8

Question Type: MultipleChoice

your application uses a page type property named customerinfo to store the customer's first and last

names. which two approaches ensure that the customer's first and last names are stored in upper case?(choose two)

Options:

- A-** creating a validate rule that validates the first and last names are in upper case and reference the validate rule in the flow action
- B-** creating an Edit input rule on the customerinfo property that automatically changes the first and last names to upper case
- C-** creating a post-processing data transform that converts the values to upper case (if needed) and reference it in the flow action
- D-** creating an Edit validate rule on the customerinfo property to validate that the first and last names are in upper case

Answer:

A, C

Question 9

Question Type: MultipleChoice

an application provides the user with written instructions for completing a form. How do you ensure that the instruction can be localized without updating the application?

Options:

- A-** cricumstance the section that describes the form for each language.
- B-** add the section to the translation package using the localization wizard.
- C-** create a filed value rule for the instruction text.
- D-** create a paragraph rule for the instruction text.

Answer:

C

Question 10

Question Type: MultipleChoice

how do you differentiate between satisfied and unsatisfied customers to provide an appropriate greeting for each customer in facebook messenger?

Options:

- A- configure a parallel process for each type of customer to return the appropriate greeting.
- B- Define both greetings and assign the appropriate intent to each one.
- C- define both greetings and apply a when rule to respond with the appropriate greeting.
- D- configure a channel for each type of customer to return the appropriate greeting

Answer:

D

Question 11

Question Type: MultipleChoice

you need to format required fields with red labels. you configure a custom style in the skin rule.

how do you apply the custom style?

Options:

- A- reference the skin rule in the dynamic layout with the required field labels
- B- reference the skin in the required field labels.
- C- reference the custom style as a parameter in a dynamic layout.
- D- reference the custom style in the required field labels

Answer:

D

Question 12

Question Type: MultipleChoice

you are configuring authentication for a pega web mashup implementation.

how do you ensure the host system origin is trusted?

Options:

- A-** in the authentication service JNDI binding parameters, specify the protocol, host, and port.
- B-** in the authentication service specify the ICAuthverification activity
- C-** in the application definition, specify the protocol, host, and port
- D-** in the content security policy record specify the website as allowed

Answer:

C
