Question 1

Question Type: MultipleChoice

During project inception, an agile practitioner engages the stakeholder to ensure alignment on the project's strategy and vision. The stakeholder asks for detailed requirements, design, and delivery plans.

What should the agile practitioner do?

Options:

- A) Provide all information requested by the stakeholder
- B) Set expectations regarding the appropriate level of details requested during this stage
- C) Inform the stakeholder that no detailed documents are provided using agile practices
- D) Ask the team to supply the information to the stakeholder

Answer:

B

Question 2

Question Type: MultipleChoice

During sprint planning, team members have differing opinions on a feature that delivers business value but fails to provide a long-term solution for the customer.

How should the team resolve this?

Options:

- A) Refer to the values of the agile framework and the team
- B) Review the signed customer contract
- C) Check the sprint priority list
- D) Submit the problem to the product owner

Answer:

A

Question 3

Question Type: MultipleChoice

What should a Scrum Master do when one team member falls behind in their tasks?

Options:

- A) Move the task to another team member who has spare capacity in the sprint
- B) Ask the team for suggestions
- C) Privately offer the team member encouragement to meet task commitments
- D) Notify the product owner

Answer:

A

Question 4

Question Type: MultipleChoice

A development team and product owner disagree on a user story in the product backlog.

What should the agile practitioner do?

Options:

- A) Have the development team follow the product owner's direction
- B) Openly challenge the product owner in an effort to poke holes in their approach
- C) Facilitate a conversation about the user story between the development team and the product owner
- D) Serve as a nonpartisan evaluator of each option, and provide direction to the development team and product owner

Answer:

D

Question 5

Question Type: MultipleChoice

Midway through a sprint, a scrum team member advises the team of a new requirement that may change the initial scope.

What should the team do?

Options:

- A) Work on requirements that the product owner may have overlooked
- B) Record the scope creep in the change management log
- C) Add the new requirement to the product backlog
- D) Ask the scrum master to secure additional time and resources

Answer:

B

Question 6

Question Type: MultipleChoice

During a review session, an agile team presented done, requirements to a group of stakeholders. Stakeholder feedback indicated that the done requirements failed to meet the most pressing needs and provide value.

What should the team have done to prevent this?

Options:

- A) Reprioritized requirements prior to committing to iteration work

- B) Ensured that requirements remained stable during the iteration cycle
- C) Had stakeholders focus on items created after the product backlog was initially built
- D) Worked on features rather than a set of components

Answer:

A

Question 7

Question Type: MultipleChoice

Based on the backlog metrics in the chart, what can explain the jump in points at the end of iteration 4?

Options:

- A) The team neglected to account for support and maintenance costs associated with other supported products
- B) The team discovered that previously accepted work could be greatly improved and added story points associated with that work
- C) The team realized that some stories were underestimated relative to other stories and reestimated as needed
- D) The team learned that the product owner needed to increase the output in the next release

Answer:

D

Question 8

Question Type: MultipleChoice

Team A is working on the second sprint of a product release. Team B, which is an independent team located on the same floor, requires extensive and frequent information to complete its sprint goal.

What should the agile team lead do?

Options:

- A) Create a central repository for information, and provide access to team B
- B) Use an information board that will be visible to all passing through the workspace
- C) Email all stakeholders with status updates
- D) Provide team B with the information on an "as needed" basis

Answer:

A

Question 9

Question Type: MultipleChoice

A product owner complains that some of the requirements identified several iterations ago have not been implemented. The product owner wants to know why the status of these requirements was not communicated.

What should the Scrum Master do?

Options:

- A) Point out that the team chose to work on other requirements to speed up the project
- B) Ensure that the product owner reviews the contents of the information radiator
- C) Ensure that the next sprint planning meeting reviews the satisfaction histogram
- D) Point out that it is the responsibility of the product owner to clarify requirements

Answer:

A

Question 10

Question Type: MultipleChoice

An agile team is planning the next iteration for a product release that has accumulated technical debt.

What should the team do?

Options:

- A) Add code cleanup activities to the product backlog and request prioritization by the product owner
- B) Add code cleanup activities to the next iteration and request clarification from the product owner
- C) Add code cleanup activities to the next iteration and ask the product owner to end the current iteration
- D) Add code cleanup activities to the next release backlog and request documentation from the product owner

Answer:

B
