Question 1

Question Type: OrderList

You work as a Network Administrator for Tech Perfect Inc. The company has a Windows Active Directory-based single forest network. The network comprises five domains. The functional level of the forest is Windows Server 2003. All client computers on the network run Windows XP Professional.

You are required to configure a DNS zone for the network. You are also required to accomplish the following task:

The zone should be hosted on the DNS server of each domain.

The zone should allow secure updates only.

Choose the steps that you will take to accomplish the task.

Required Steps	Steps
	- Store the zone data in the ForestDnsZones application directory - Store the zone data in the DomainDnsZones application directory - Configure the zone as an Active Directory-integrated zone - Configure the zone as a primary zone on the DNS servers
- Configure the zone as an Active Directory-integrated zone - Store the zone data in the DomainDnsZones application directory	- Configure the zone as a primary zone on the DNS servers - Store the zone data in the ForestDnsZones application directory

Answer:

Configure the zone as an Active Directory-integrated zone
Store the zone data in the DomainDnsZones application directory
